Kalinga University, Naya Raipur

B.Sc. Microbiology

Scheme of Semester System Examination

First Semester					
Paper Code	SUBJECTS	Credits	Internal Marks	External Marks	Total
	(Choose Any One) 101A/101B	2	15	35	50
BMB101A	English				
BMB101B	NCC				
BMB102	Introduction to Microbiology and Microbial Diversity	4	30	70	100
BMB103	Bacteriology	4	30	70	100
BMB104	Introduction and Scope of Microbiology	4	30	70	100
BMB105P	Introduction to Microbiology and Microbial Diversity Lab	2	20	30	50
BMB106P	Bacteriology Lab	2	20	30	50
	Total	18	145	305	450

Second Semester					
Paper Code	SUBJECTS	Credits	Internal Marks	External Marks	Total
	(Choose Any One) 201A/201B	2	15	35	50
BMB201A	Environmental Science				
BMB201B	NCC				
BMB202	Biochemistry	4	30	70	100
BMB203	Cell Biology	4	30	70	100
BMB204	Bacteriology and Virology	4	30	70	100
BMB205P	Biochemistry Lab	2	20	30	50
BMB206P	Cell Biology-Lab	2	20	30	50
BMB207P	Bacteriology and Virology Lab	2	20	30	50
	Total	20	165	335	500

Third Semester					
Paper Code	SUBJECTS	Credits	Internal Marks	External Marks	Total
BMB301	Microbial Physiology and Metabolism	3	30	70	100
BMB302	Fundamental of IT	3	30	70	100
BMB303	Molecular Biology	3	30	70	100
ELECTIVE-I:- Choose any one					
BMB304A	Microbial Quality Control in Food and Pharmaceutical Industries	3	30	70	100
BMB304B	Microbial Diagnosis in Health Clinics				
BMB304C	Biofertilizers and Biopesticides				
BMB305	ELECTIVE-II:- Choose any one				
BMB305A	Microbial Metabolism	3	30	70	100
BMB305B	Microbial Genetics and Molecular Biology				
BMB306P	Microbial Physiology and Metabolism- Lab	2	20	30	50
BMB307P	Fundamental of IT Lab	1	20	30	50
BMB308P	Molecular Biology Lab	2	20	30	50
BMB309P	ELECTIVE-II:- Choose any one (Practical)				
BMB309A(P)	Microbial Metabolism Lab	1	20	30	50
BMB309B(P)	Microbial Genetics and Molecular Biology Lab				
Total		21	230	470	700

Fourth Semester					
Paper Code	SUBJECTS	Credits	Internal Marks	External Marks	Total
BMB401	Microbial Genetics and Genomics	3	30	70	100
BMB402	Environmental Microbiology	3	30	70	100
BMB403	Food and Dairy Microbiology	3	30	70	100
BMB404	ELECTIVE-III:- Choose any one				
BMB404A	Food Fermentation Techniques404	3	30	70	100
BMB404B	Management of Human Microbial Diseases				
BMB404C	Microbiological Analysis of Air and Water				
BMB404D	Fundamentals of Bioinformatics				
BMB405	ELECTIVE-IV:- Choose any one				
BMB405A	Industrial and Food Microbiology405	3	30	70	100
BMB405B	Microbes in Environment				
BMB405C	Medical Microbiology and Immunology				
BMB405D	Genetic Engineering and Biotechnology				
BMB406P	Microbial Genetics and Genomics	2	20	30	50
BMB407P	Environmental Microbiology Lab	2	20	30	50
BMB408P	Food and Dairy Microbiology Lab	2	20	30	50
BMB409P	ELECTIVE-IV:- Choose any one (Practical)				
BMB409A(P)	Industrial and Food Microbiology405 Lab	1	20	30	50
BMB409B(P)	Microbes in Environment Lab				
BMB409C(P)	Medical Microbiology and Immunology Lab				
BMB409D(P)	Genetic Engineering and Biotechnology Lab				
	Total	22	230	470	700

Fifth Semester					
Paper Code	SUBJECTS	Credits	Internal Marks	External Marks	Total
BMB501	Industrial Microbiology	3	30	70	100
BMB502	Immunology	3	30	70	100
BMB507	Soft Skill & Personality Enhancement	3	30	70	100
BMB503	ELECTIVE-V:- Choose any two				
BMB503A	Bioinformatics	6	60	140	200
BMB503B	Plant Pathology				
BMB503C	Inheritance Biology				
BMB503D	Biomathematics and Biostatistics				
BMB504P	Industrial Microbiology Lab	1	20	30	50
BMB505P	Immunology Lab	1	20	30	50
BMB506P	ELECTIVE-V:- Choose any two (Practical)				
BMB506A(P)	Bioinformatics Lab	2	40	60	100
BMB506B(P)	Plant Pathology Lab				
BMB506C(P)	Inheritance Biology Lab				
BMB506D(P)	Biomathematics and Biostatistics Lab				
	Total	19	230	470	700

Sixth Semester					
Paper Code	SUBJECTS	Credits	Internal Marks	External Marks	Total
BMB601	Medical Microbiology	3	30	70	100
BMB602	Recombinant DNA Technology	3	30	70	100
BMB603	ELECTIVE-VI:- Choose any two				
BMB603A	Microbial Biotechnology,	6	60	140	200
BMB603B	Advances in Microbiology				
BMB603C	Instrumentation and Biotechniques				
BMB603D	Biosafety and Intellectual Property Rights				
BMB604P	Project Work	4	30	70	100
BMB605P	Medical Microbiology Lab	1	20	30	50
BMB606P	Recombinant DNA Technology Lab	1	20	30	50
BMB607P	ELECTIVE-VI:- Choose any two (Practical)				
BMB607A(P)	Microbial Biotechnology, Lab	2	40	60	100
BMB607B(P)	Advances in Microbiology Lab				
BMB607C(P)	Instrumentation and Biotechniques Lab				
BMB607D(P)	Biosafety and Intellectual Property Rights (IPR) Lab				
	Total	22	230	470	700

BMB101A**English****Course Objective**

The purpose of this course is to introduce students to the theory, fundamentals and tools of communication and to develop in them vital communication skills which should be integral to personal, social and professional interactions. One of the critical links among human beings and an important thread that binds society together is the ability to share thoughts, emotions and ideas through various means of communication: both verbal and non-verbal. In the context of rapid globalization and increasing recognition of social and cultural pluralities, the significance of clear and effective communication has substantially enhanced.

CONTENTS

Unit I: Introduction:	06
Theory of Communication, Types and modes of Communication, <i>Mediums and channels of communication, barriers to communication, English as a Global language, the Lingua Franca, Social influences on English</i>	
Unit II: Language of Communication:	06
Verbal and Non-verbal (Spoken and Written) Personal, Social and Business Barriers and Strategies Intra-personal, Inter-personal and Group communication, <i>Varieties of English, Language, Accent, Dialect, Colloquialism, Historical influences on English</i>	
Unit III: Speaking Skills:	06
Monologue Dialogue Group Discussion Effective Communication/ Mis- Communication Interview Public Speech, <i>Regional influences on English, Convergence and divergence, Linguistic Imperialism,</i>	
Unit IV: Reading and Understanding-	06
Close Reading, Reading analysis of a text - Audience and purpose, Content and theme, Tone and Mood, stylistic devices, structure Comprehension- Analysis and Interpretation Translation(from Indian language to English and vice-versa) Literary/Knowledge Texts	
Unit V: Writing Skills	06
Documenting Report Writing Making notes Letter writing, Writing tabloids, diary entry, open letters, essays, newsletter and magazine articles, skits, short stories, impersonating characters	

Course outcome:

It will enhance Language of communication, various speaking skills such as personal communication, social interactions and communication in professional situations such as interviews, group discussions and office environments, important reading skills as well as writing skills such as report writing, notetaking etc. While, to an extent, the art of communication is natural to all living beings, in today's world of complexities, it has also acquired some elements of science. It is hoped that after studying this course, students will find a difference in their personal and professional interactions.

Recommended Readings:

1. Fluency in English - Part II, Oxford University Press, 2006.
2. Business English, Pearson, 2008.
3. Language, Literature and Creativity, Orient Blackswan, 2013.
4. Language through Literature (forthcoming) ed. Dr. Gauri Mishra, Dr Ranjana Kaul, Dr Brati Biswas

INTRODUCTION TO MICROBIOLOGY AND MICROBIAL DIVERSITY**Unit 1****An overview of Scope of Microbiology**

Development of microbiology as a discipline, Spontaneous generation vs. biogenesis. Contributions of Anton von Leeuwenhoek, Louis Pasteur, Robert Koch, Joseph Lister, Alexander Fleming.

Unit 2

Role of microorganisms in fermentation, Germ theory of disease, Development of various microbiological techniques and golden era of microbiology, Development of the field of soil microbiology: Contributions of Martinus W. Beijerinck, Sergei N. Winogradsky, Selman A. Waksman Establishment of fields of medical microbiology and immunology through the work of Paul Ehrlich, Elie Metchnikoff, Edward Jenner.

Unit 3**Systems of classification**

Binomial Nomenclature, Whittaker's five kingdom and Carl Woese's threekingdom classification systems and their utility. Difference between prokaryotic and eukaryotic microorganisms.

Unit 4

General characteristics of different groups: **Acellular** microorganisms (Viruses, Viroids, Prions) and **Cellular** microorganisms (Bacteria, Algae, Fungi and Protozoa) with emphasis on distribution and occurrence, morphology, mode of reproduction and economic importance.

• Algae

General characteristics of algae including occurrence, thallus organization, algae cell ultra-structure, pigments, flagella, eyespot food reserves and vegetative, asexual and sexual reproduction. Different types of life cycles in algae with suitable examples: Haplobiontic, Haplontic, Diplontic, Diplobiontic and Diplohaplontic life cycles. Type studies: *Chlamydomonas*, *Volvox* and *Spirogyra*. Applications of algae in agriculture, industry, environment and food.

Unit 5**• Fungi**

General characteristics of fungi including habitat, distribution, nutritional requirements, fungal cell ultra-structure, thallus organization and aggregation, fungal wall structure and synthesis, asexual reproduction, sexual reproduction, heterokaryosis, heterothallism and parasexual mechanism. Type studies: *Rhizopus*, *Aspergillus*, *Saccharomyces* and *Agaricus*. Economic Importance of Fungi with examples in agriculture, environment, Industry, medicine, food, biodeterioration, mycotoxins.

• Protozoa

General characteristics with special reference to *Amoeba*, *Paramecium* and *Plasmodium*.

BMB103

BACTERIOLOGY**Unit 1 Cell organization No.**

Cell size, shape and arrangement, glycocalyx, capsule, flagella, endoflagella, fimbriae and pili. Cell-wall: Composition and detailed structure of Gram-positive and Gram-negative cell walls, Archaeobacterial cell wall, Gram and acid fast staining mechanisms, lipopolysaccharide (LPS), sphaeroplasts, protoplasts, and L-forms. Effect of antibiotics and enzymes on the cell wall.

Cell Membrane: Structure, function and chemical composition of bacterial and archaeal cell membranes.

Cytoplasm: Ribosomes, mesosomes, inclusion bodies, nucleoid, chromosome and plasmids

Endospore: Structure, formation, stages of sporulation.

Unit 2**Bacteriological techniques Microscopy**

Pure culture isolation: Streaking, serial dilution and plating methods; cultivation, maintenance and preservation/stocking of pure cultures; cultivation of anaerobic bacteria, and accessing non-culturable bacteria.

Microscopy

Bright Field Microscope: Principle and functions.

Unit 3 Growth and nutrition

Nutritional requirements in bacteria and nutritional categories.

Culture media: components of media, natural and synthetic media, chemically defined media, complex media, selective, differential, indicator, enriched and enrichment media.

Physical methods of microbial control: heat, low temperature, high pressure, filtration, desiccation, osmotic pressure, radiation.

Chemical methods of microbial control: disinfectants, types and mode of action.

Reproduction in Bacteria

Asexual methods of reproduction, logarithmic representation of bacterial populations, phases of growth, calculation of generation time and specific growth rate.

Unit 4 Bacterial Systematics

Aim and principles of classification, systematics and taxonomy, concept of species, taxa, strain; conventional, molecular and recent approaches to polyphasic bacterial taxonomy, evolutionary chronometers, rRNA oligonucleotide sequencing, signature sequences, and protein sequences. Differences between eubacteria and archaeobacteria.

Unit 5 Important archaeal and eubacterial groups

Archaeobacteria: General characteristics, phylogenetic overview, genera belonging to Nanoarchaeota (*Nanoarchaeum*), Crenarchaeota (*Sulfolobus*, *Thermoproteus*) and Euryarchaeota [Methanogens (*Methanobacterium*, *Methanocaldococcus*), thermophiles (*Thermococcus*, *Pyrococcus*, *Thermoplasma*), and Halophiles (*Halobacterium*, *Halococcus*)].

Eubacteria: Morphology, metabolism, ecological significance and economic importance of following groups:

Gram Negative:

Non proteobacteria: General characteristics with reference to *Deinococcus*, *Chlamydia*, *Chlorobium* and *Spirochaetes*,

Alpha proteobacteria: General characteristics with reference to *Rhizobium*, *Rickettsia* and *Agrobacterium*.

Beta proteobacteria: General characteristics with reference to *Neisseria*, *Burkholderia* and *Thiobacillus*.

Gamma proteobacteria: General characteristics with reference to *Pseudomonas*, Purple Sulfur bacteria and Enterobacteriaceae family.

Delta proteobacteria: General characteristics with reference to *Myxobacteria* and *Bdellovibrio*.
Epsilon proteobacteria: General characteristics with reference to *Helicobacter* and *Campylobacter*.
Zeta proteobacteria: General characteristics with reference to *Mariprofundus ferrooxydans*. **Gram**

Positive:

Low G+C (Firmicutes): General characteristics with reference to *Lactobacillus*, *Bacillus*, *Clostridium*, *Mycoplasma*, *Staphylococcus*, *Streptococcus* and *Heliobacterium*.

High G+C (Actinobacteria): General characteristics with reference to *Corynebacterium*, *Streptomyces*, *Bifidobacterium*, *Propionibacterium*, *Frankia*, *Mycobacterium* and *Nocardia*.

Cyanobacteria: General characteristics.

BMB104**INTRODUCTION AND SCOPE OF MICROBIOLOGY****Unit 1 History of Development of Microbiology**

Development of microbiology as a discipline, Spontaneous generation vs. biogenesis. Contributions of Anton von Leeuwenhoek, Louis Pasteur, Robert Koch, Joseph Lister, Alexander Fleming.

Role of microorganisms in fermentation, Germ theory of disease, Development of various microbiological techniques and golden era of microbiology, Development of the field of soil microbiology: Contributions of Martinus W. Beijerinck, Sergei N. Winogradsky, Selman A. Waksman
Establishment of fields of medical microbiology and immunology through the work of Paul Ehrlich, Elie Metchnikoff, Edward Jenner.

Unit 2 Diversity of Microorganisms

Systems of classification : Binomial nomenclature, Whittaker's five kingdom and Carl Woese's three kingdom classification systems and their utility.

General characteristics of different groups: Acellular microorganisms (Viruses, Viroids, Prions) and Cellular microorganisms (Prokarya: Archaea and Bacteria, Eukarya: Algae, Fungi and Protozoa) giving definitions and citing examples.

Protozoa : Methods of nutrition, locomotion & reproduction - Amoeba, *Paramecium* and *Plasmodium*.

Unit 3 Microscopy Bright Field Microscope, Dark Field Microscope, Phase Contrast Microscope, Fluorescence Microscope, Transmission Electron Microscope, Scanning Electron Microscope.

Sterilization

Moist Heat, Autoclave, Dry Heat, Hot Air Oven, Tyndallization, Filtration.

Unit 4 Microbes in Human Health & Environment

Medical microbiology and immunology: List of important human diseases and their causative agents of various human systems. Definitions of immunity (active/passive), primary and secondary immune response, antigen, antibody and their types.

Environmental microbiology: Definitions and examples of important microbial interactions – mutualism, commensalism, parasitism, Definitions and microorganisms used as biopesticides, biofertilizers, in biodegradation, biodeterioration and bioremediation (e.g. hydrocarbons in oil spills).

Unit 5 Industrial Microbiology

Definition of fermentation, primary and secondary metabolites, types of fermentations and fermenters and microbes producing important industrial products through fermentation.

Food and Dairy Microbiology

Microorganisms as food (SCP), microorganisms in food fermentations (dairy and non dairy based fermented food products) and probiotics. Microorganisms in food spoilage and food borne infections.

7. Stanier RY, Ingraham JL, Wheelis ML, and Painter PR. (2005). General Microbiology. 5th edition. McMillan.

BMB106P**INTRODUCTION TO MICROBIOLOGY AND MICROBIAL DIVERSITY**

(PRACTICALS)

- Microbiology Good Laboratory Practices and Biosafety.
- To study the principle and applications of important instruments (biological safety cabinets, autoclave, incubator, BOD incubator, hot air oven, light microscope, pH meter) used in the microbiology laboratory.
- Sterilization of medium using Autoclave and assessment for sterility.
- Sterilization of glassware using Hot Air Oven and assessment for sterility.
- Sterilization of heat sensitive material by membrane filtration and assessment for sterility.
- 6. Demonstration of the presence of microflora in the environment by exposing nutrient agar plates to air.
- 7. Study of *Rhizopus*, *Penicillium*, *Aspergillus*, *Saccharomyces* using temporary mounts.
- 8. Study of *Spirogyra* and *Chlamydomonas*, *Volvox* using temporary mounts
- 9. Study of the following protozoans using permanent mounts/photographs: *Amoeba*, *Entamoeba*, *Paramecium* and *Plasmodium*.

BMB107P

BACTERIOLOGY (PRACTICAL)

1. Preparation of different media: Synthetic Media, Complex media (Nutrient Agar, McConkey agar).
2. Simple staining.
3. Negative staining.
4. Gram's staining.
5. Acid fast staining (permanent slide only).
6. Capsule staining.
7. Spore staining.
8. Isolation of pure cultures of bacteria by streaking method.
9. Estimation of CFU count by spread plate method/pour plate method.
10. Demonstration of Motility by hanging drop method.

RAIPUR

BMB201A**Environmental Science****Unit 1 : Introduction to Environmental Studies****(6 Lecture)**

- Multidisciplinary nature of environmental studies;
- Scope and importance; Concept of sustainability and sustainable development.

Ecosystems

- What is an ecosystem? Structure and function of ecosystem; Energy flow in an ecosystem: food chains, food webs and ecological succession. Case studies of the following ecosystems :
 - a) Forest ecosystem
 - b) Grassland ecosystem
 - c) Desert ecosystem
 - d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Unit 2 : Natural Resources : Renewable and Non-renewable Resources**(6 Lecture)**

- Land resources and land use change; Land degradation, soil erosion and desertification.
- Deforestation: Causes and impacts due to mining, dam building on environment, forests, biodiversity and tribal populations.
- Water : Use and over-exploitation of surface and ground water, floods, droughts, conflicts over water (international & inter-state).
- Energy resources : Renewable and non renewable energy sources, use of alternate energy sources, growing energy needs, case studies.

Unit 3 : Biodiversity and Conservation**(5 Lecture)**

- Levels of biological diversity : genetic, species and ecosystem diversity; Biogeographic zones of India; Biodiversity patterns and global biodiversity hot spots
- India as a mega-biodiversity nation; Endangered and endemic species of India
- Threats to biodiversity : Habitat loss, poaching of wildlife, man-wildlife conflicts, biological invasions; Conservation of biodiversity : In-situ and Ex-situ conservation of biodiversity.
- Ecosystem and biodiversity services: Ecological, economic, social, ethical, aesthetic and Informational value.

Unit 4 : Environmental Pollution**(9 Lecture)**

- Environmental pollution : types, causes, effects and controls; Air, water, soil and noise pollution
- Nuclear hazards and human health risks
- Solid waste management : Control measures of urban and industrial waste.
- Pollution case studies.

Environmental Policies & Practices

- Climate change, global warming, ozone layer depletion, acid rain and impacts on human communities and agriculture
- Environment Laws: Environment Protection Act; Air (Prevention & Control of Pollution) Act; Water (Prevention and control of Pollution) Act; Wildlife Protection Act; Forest

Conservation Act. International agreements: Montreal and Kyoto protocols and Convention on Biological Diversity (CBD).

- Nature reserves, tribal populations and rights, and human wildlife conflicts in Indian context.

Unit 5 : Human Communities and the Environment

(4 Lecture)

- Human population growth: Impacts on environment, human health and welfare.
- Resettlement and rehabilitation of project affected persons; case studies.
- Disaster management : floods, earthquake, cyclones and landslides.
- Environmental movements : Chipko, Silent valley, Bishnois of Rajasthan.
- Environmental ethics: Role of Indian and other religions and cultures in environmental conservation.
- Environmental communication and public awareness, case studies (e.g., CNG vehicles in Delhi).

BMB202

BIOCHEMISTRY**Unit 1 Bioenergetics**

First and second laws of Thermodynamics. Definitions of Gibb's Free Energy, Enthalpy, and Entropy and mathematical relationship among them, Standard free energy change and equilibrium constant. Coupled reactions and additive nature of standard free energy change, Energy rich compounds: Phosphoenolpyruvate, 1,3- Bisphosphoglycerate, Thioesters, ATP.

Unit 2 Carbohydrates

Families of monosaccharides: aldoses and ketoses, trioses, tetroses, pentoses, and hexoses.

Stereo-isomerism of monosaccharides, epimers, Mutarotation and anomers of glucose. Furanose and pyranose forms of glucose and fructose, Haworth projection formulae for glucose; chair and boat forms of glucose, Sugar derivatives, glucosamine, galactosamine, muramic acid, N- acetyl neuraminic acid, Disaccharides; concept of reducing and non-reducing sugars, occurrence and Haworth projections of maltose, lactose, and sucrose, Polysaccharides, storage polysaccharides, starch and glycogen. Structural Polysaccharides, cellulose, peptidoglycan and chitin.

Unit 3 Lipids

Definition and major classes of storage and structural lipids. Storage lipids. Fatty acids structure and functions. Essential fatty acids. Triacyl glycerols structure, functions and properties. Saponification. Structural lipids. Phosphoglycerides: Building blocks, General structure, functions and properties. Structure of phosphatidylethanolamine and phosphatidylcholine, Sphingolipids: building blocks, structure of sphingosine, ceramide. Special mention of sphingomyelins, cerebrosides and gangliosides. Lipid functions: cell signals, cofactors, prostaglandins, Introduction of lipid micelles, monolayers and bilayers.

Unit 4 Proteins

Functions of proteins, Primary structures of proteins: Amino acids, the building blocks of proteins. General formula of amino acid and concept of zwitterion. Titration curve of amino acid and its significance, classification, biochemical structure and notation of standard protein amino acids. Ninhydrin reaction. Natural modifications of amino acids in proteins hydrolysis, cystine and hydroxyproline, Non protein amino acids: Gramicidin, beta-alanine, D-alanine and D- glutamic acid. Oligopeptides: Structure and functions of naturally occurring glutathione and insulin and synthetic aspartame, Secondary structure of proteins: Peptide unit and its salient features. The alpha helix, the beta pleated sheet and their occurrence in proteins, Tertiary and Quaternary structures of proteins. Forces holding the polypeptide together. Human haemoglobin structure.

Unit 5. Enzymes

Structure of enzyme: Apoenzyme and cofactors, prosthetic group-TPP, coenzyme

NAD, metal cofactors, Classification of enzymes, Mechanism of action of enzymes: active site, transition state complex and activation energy. Lock and key hypothesis and Induced Fit hypothesis. Significance of hyperbolic, double reciprocal plots of enzyme activity, K_m , and allosteric mechanism. Definitions of terms – enzyme unit, specific activity and turnover number, Multienzyme complex: pyruvate dehydrogenase; isozyme: lactate dehydrogenase, Effect of pH and temperature on enzyme activity. Enzyme inhibition: competitive- sulfa drugs; non-competitive-heavy metal salts.

BMB203

CELL BIOLOGY

Unit 1 Structure of Cell

Plasma membrane: Structure and transport of small molecules.

Cell Wall: Eukaryotic cell wall, Extracellular matrix and cell matrix interactions, Cell-Cell Interactions - adhesion junctions, tight junctions, gap junctions, and plasmodesmata (only structural aspects).

Mitochondria, chloroplasts and peroxisomes.

Cytoskeleton: Structure and organization of actin filaments, association of actin filaments with plasma membrane, cell surface protrusions, intermediate filaments, microtubules.

Unit 2 Nucleus

Nuclear envelope, nuclear pore complex and nuclear lamina.

Chromatin – Molecular organization.

Nucleolus.

Unit 3 Protein Sorting and Transport

Endoplasmic Reticulum – Structure, targeting and insertion of proteins in the ER, protein folding, processing and quality control in ER, smooth ER and lipid synthesis, export of proteins and lipids

Golgi Apparatus – Organization, protein glycosylation, protein sorting and export from Golgi Apparatus.

Lysosomes.

Unit 4 Cell Signalling

Signalling molecules and their receptors.

Function of cell surface receptors.

Pathways of intracellular receptors – Cyclic AMP pathway, cyclic GMP and MAP kinase pathway.

Unit 5 Cell Cycle, Cell Death and Cell Renewal

Eukaryotic cell cycle and its regulation, Mitosis and Meiosis.

Development of cancer, causes, types, Diagnosis and therapy.

Programmed cell death.

Stem cells. **Types:** Embryonic stem cell, induced pluripotent stem cells.

R A I P U R

BMB207P

CELL BIOLOGY(PRACTICAL)

1. Study a representative plant and animal cell by microscopy.
2. Study of the structure of cell organelles through electron micrographs.
3. Cytochemical staining of DNA – Feulgen.
4. Demonstration of the presence of mitochondria in striated muscle cells/ cheek epithelial cell using vital stain Janus Green B.
5. Study of polyploidy in Onion root tip by colchicine treatment.
6. Identification and study of cancer cells by photomicrographs.
7. Study of different stages of Mitosis.
8. Study of different stages of Meiosis by permanent slides.

BMB204**BACTERIOLOGY AND VIROLOGY****Unit 1 Cell organization**

Cell size, shape and arrangements, capsule, flagella and pili, Composition and detailed structure of gram- positive and gram- negative cell wall and archaeal cell wall, Structure, chemical composition and functions of bacterial and archaeal cell membranes, Ribosomes, inclusions, nucleoid, plasmids, structure, formation and stages of sporulation.

Unit 2 Bacterial growth and control

Culture media: Components of media, Synthetic or defined media, Complex media, enriched media, selective media, differential media, enrichment culture media.

Pure culture isolation: Streaking, serial dilution and plating methods, cultivation, maintenance and stocking of pure cultures, cultivation of anaerobic bacteria. Growth: Binary fission, phases of growth.

Unit 3 Bacterial Systematics and Taxonomy

Taxonomy, nomenclature, systematics, types of classifications.

Morphology, ecological significance and economic importance of the following groups:

Archaea: methanogens, thermophiles and halophiles.

Eubacteria: Gram negative and Gram positive.

Gram negative:

Non-proteobacteria– *Deinococcus*, *Chlamydia*, Spirochetes.

Alpha proteobacteria- *Rickettsia*, *Rhizobium*, *Agrobacterium*.

Gamma proteobacteria –*Escherichia*, *Shigella*, *Pseudomonas*.

Gram positive: Low G+C: *Mycoplasma*, *Bacillus*, *Clostridium*, *Staphylococcus* High G+C: *Streptomyces*, *Frankia*.

Unit 4 Introduction to Viruses

Properties of viruses; general nature and important features.

Subviral particles; viroids, prions and their importance.

Isolation and cultivation of viruses.

Unit 5 Structure, and multiplication of viruses

Morphological characters: Capsid symmetry and different shapes of viruses with examples.

Viral multiplication in the Cell: Lytic and lysogenic cycle.

Description of important viruses: salient features of the viruses infecting different hosts -

Bacteriophages (T4 & Lambda); Plant (TMV & Cauliflower Mosaic Virus), Human (HIV & Hepatitis viruses).

Role of Viruses in Disease and its prevention

Viruses as pathogens: Role of viruses in causing diseases.

Prevention and control of viruses: Viral vaccines, interferons and antiviral compounds.

BMB206P**BIOCHEMISTRY (PRACTICALS)**

1. Properties of water, Concept of pH and buffers, preparation of buffers and Numerical problems to explain the concepts.
2. Handling of micropipettes and checking their accuracy.
3. Standard Free Energy Change of coupled reactions.
4. Qualitative tests for carbohydrates, reducing sugars, non reducing sugars.
5. Qualitative tests for lipids and proteins.
6. Study of protein secondary and tertiary structures with the help of models.
7. Study of enzyme kinetics – calculation of V_{max} , K_m , K_{cat} values.

BMB208P**BACTERIOLOGY AND VIROLOGY (PRACTICAL)**

1. Preparation of different media: Nutrient agar, Nutrient broth.
2. To perform simple staining of the bacterial smear
3. To perform Gram's staining.
4. To perform spore staining.
5. Isolation of pure cultures of bacteria by streaking method.
6. Enumeration of colony forming units (CFU) count by spread plate method/pour plate.
7. Study the morphological structures of viruses (DNA and RNA) and their important characters using electron micrographs.
8. Study of the methods of isolation and propagation of plant viruses.

RAIPUR

BMB301

BMICROBIAL PHYSIOLOGY AND METABOLISM

Unit 1 Microbial Growth and Effect of Environment on Microbial Growth

Definitions of growth, Batch culture, Continuous culture, generation time and specific growth rate
Effect of temperature and pH on microbial growth.
Effect of solute and water activity on growth.
Effect of oxygen concentration on growth.
Nutritional categories of microorganisms.

Unit 2 Nutrient uptake and Transport

Passive and facilitated diffusion.
Primary and secondary active transport, concept of uniport, symport and antiport
Group translocation.
Iron uptake.

Unit 3 Chemo heterotrophic Metabolism - Aerobic Respiration

Concept of aerobic respiration, anaerobic respiration and fermentation.
Sugar degradation pathways i.e. EMP, ED, Pentose phosphate pathway TCA cycle.
Electron transport chain: components of respiratory chain, comparison of mitochondrial and bacterial ETC, electron transport phosphorylation, uncouplers and inhibitors.

Unit 4 Chemo heterotrophic Metabolism- Anaerobic respiration and fermentation

Anaerobic respiration with special reference to dissimilatory nitrate reduction (Denitrification; nitrate/nitrite and nitrate/ammonia respiration; fermentative nitrate reduction).
Fermentation - Alcohol fermentation and Pasteur effect; Lactate fermentation (homofermentative and heterofermentative pathways), concept of linear and branched fermentation pathways.

Unit 5 Chemolithotrophic and Phototrophic Metabolism

Introduction to aerobic and anaerobic chemolithotrophy with an example each. Hydrogen oxidation (definition and reaction) and methanogenesis (definition and reaction). Introduction to phototrophic metabolism - groups of phototrophic microorganisms, anoxygenic vs. oxygenic photosynthesis with reference to photosynthesis in green bacteria and cyanobacteria.

Nitrogen Metabolism - an overview

Introduction to biological nitrogen fixation.
Ammonia assimilation.
Assimilatory nitrate reduction.

BMB303

MOLECULAR BIOLOGY

Unit 1 Structures of DNA and RNA / Genetic Material

DNA Structure: Miescher to Watson and Crick- historic perspective, DNA structure, Salient features of double helix, Types of DNA, Types of genetic material, denaturation and renaturation, cot curves. DNA topology: linking number, topoisomerases; Organization of DNA Prokaryotes, Viruses, Eukaryotes. RNA Structure,

Unit 2 Replication of DNA (Prokaryotes and Eukaryotes)

Bidirectional and unidirectional replication, semi- conservative, semi- discontinuous replication. Mechanism of DNA replication: Enzymes and proteins involved in DNA replication –DNA polymerases, DNA ligase, primase, telomerase – for replication of linear ends. Various models of DNA replication including rolling circle, D- loop (mitochondrial), Θ (theta) mode of replication and other accessory protein, Mismatch and excision repair.

Unit 3 Transcription in Prokaryotes and Eukaryotes

Transcription: Definition, difference from replication, promoter - concept and strength of promoter RNA Polymerase and the transcription unit. Transcription in Eukaryotes: RNA polymerases, general Transcription factors.

Unit 4 Post-Transcriptional Processing

Split genes, concept of introns and exons, RNA splicing, spliceosome machinery, concept of alternative splicing, Polyadenylation and capping, Processing of rRNA, RNA interference: si RNA, miRNA and its significance.

Unit 5 Translation (Prokaryotes and Eukaryotes)

Translational machinery, Charging of tRNA, aminoacyl tRNA synthetases, Mechanisms of initiation, elongation and termination of polypeptides in both prokaryotes and eukaryotes, Fidelity of translation, Inhibitors of protein synthesis in prokaryotes and eukaryote.

Regulation of gene Expression in Prokaryotes and Eukaryotes

Principles of transcriptional regulation, regulation at initiation with examples from *lac* and *trp* operons, Sporulation in *Bacillus*, Yeast mating type switching, Changes in Chromatin Structure - DNA methylation and Histone Acetylation mechanisms.

SUGGESTED READINGS

BMB304A**MICROBIAL QUALITY CONTROL IN FOOD AND PHARMACEUTICAL INDUSTRIES****Unit 1 Microbiological Laboratory and Safe Practices**

Good laboratory practices, Good microbiological practices. Biosafety cabinets – Working of biosafety cabinets, using protective clothing, specification for BSL-1, BSL-2, BSL-3. Discarding biohazardous waste – Methodology of Disinfection, Autoclaving & Incineration.

Unit 2 Determining Microbes in Food / Pharmaceutical Samples

Culture and microscopic methods - Standard plate count, Most probable numbers, Direct microscopic counts, Biochemical and immunological methods: Limulus lysate test for endotoxin, gel diffusion, sterility testing for pharmaceutical products.

Molecular methods - Nucleic acid probes, PCR based detection, biosensors.

Unit 3 Pathogenic Microorganisms of importance in Food & Water

Enrichment culture technique, Detection of specific microorganisms - on XLD agar, Salmonella Shigella Agar, Manitol salt agar, EMB agar, McConkey Agar, Saboraud Agar.

Unit 4

Ascertaining microbial quality of milk by MBRT, Rapid detection methods of microbiological quality of milk at milk collection centres (COB, 10 min Resazurin assay).

Unit 5 HACCP for Food Safety and Microbial Standards

Hazard analysis of critical control point (HACCP) - Principles, flow diagrams, limitations

Microbial Standards for Different Foods and Water – BIS standards for common foods and drinking water.

BMB304B**MICROBIAL DIAGNOSIS IN HEALTH CLINICS****Unit 1 Importance of diagnosis of diseases**

Bacterial, Viral, Fungal and Protozoan Diseases of various human body systems, clinical samples for diagnosis of infectious disease.

Unit 2 Collection of Clinical Samples

How to collect clinical samples (oral cavity, throat, skin, Blood, CSF, urine and faeces) and precautions required. Method of transport of clinical samples to laboratory and storage.

Unit 3 Microscopic examination and culture methods.

Examination of sample by staining - Gram stain, Ziehl-Neelson staining for tuberculosis, Giemsa-stained thin blood film for malaria.

Preparation and use of culture media - Blood agar, Chocolate agar, Lowenstein-Jensen medium, MacConkey agar, Distinct colony properties of various bacterial pathogens.

Unit 4: Serological and Molecular methods

Serological Methods - Agglutination, ELISA, immunofluorescence, Nucleic acid based methods - PCR, Nucleic acid probes.

Kits for rapid Detection of Pathogens

Typhoid, Dengue and HIV, Swine flu.

Unit 5: Testing for Antibiotic sensitivity in Bacteria

Importance, Determination of resistance/sensitivity of bacteria using disc diffusion method, Determination of minimal inhibitory concentration (MIC) of an antibiotic by serial double dilution method.

BMB304C**BIOFERTILIZERS AND BIOPESTICIDES****Unit 1 Biofertilizers**

General account of the microbes used as biofertilizers for various crop plants and their advantages over chemical fertilizers.

Symbiotic N₂ fixers: *Rhizobium* - Isolation, characteristics, types, inoculum production and field application, legume/pulses plants.

Frankia - Isolation, characteristics, Alder, Casurina plants, non-leguminous crop symbiosis. Cyanobacteria, *Azolla* - Isolation, characterization, mass multiplication, Role in rice cultivation, Crop response, field application.

Unit 2 Non - Symbiotic N₂ fixers

Free living *Azospirillum*, *Azotobacter* - free isolation, characteristics, mass inoculum production and field application.

Unit 3 Phosphate and silicate solubilizers

Phosphate and silicate solubilizing microbes - Isolation, characterization, mass inoculum production, field application.

Unit 4 Mycorrhizal biofertilizers

Importance of mycorrhizal inoculum, types of mycorrhizae and associated plants, Mass inoculum production of VAM, field applications of Ectomycorrhizae and VAM.

Unit 5 Bioinsecticides

General account of microbes used as bioinsecticides and their advantages over synthetic pesticides, *Bacillus thuringiensis*, production, Field applications, Viruses – cultivation and field applications. Introduction to mycoinsecticides.

BMB305A**MICROBIAL METABOLISM****Unit 1 Microbial Growth and Effect of Environment on Microbial Growth**

Definitions of growth, Batch culture, Continuous culture, generation time and specific growth rate.

Temperature and temperature ranges of growth.

pH and pH ranges of growth.

Effect of solute and water activity on growth.

Effect of oxygen concentration on growth.

Nutritional categories of microorganisms.

Unit 2 Nutrient uptake and Transport

Passive and facilitated diffusion.

Primary and secondary active transport, concept of uniport, symport and antiport.

Group translocation.

Iron uptake.

Unit 3 Chemoheterotrophic Metabolism - Aerobic Respiration

Concept of aerobic respiration, anaerobic respiration and fermentation.

Sugar degradation pathways i.e. EMP, ED, Pentose phosphate pathway.

TCA cycle..

Electron transport chain: components of respiratory chain, comparison of mitochondrial and bacterial ETC, electron transport phosphorylation, uncouplers and inhibitors

Unit 4 Chemoheterotrophic Metabolism- Anaerobic respiration and fermentation

Anaerobic respiration with special reference to dissimilatory nitrate reduction (Denitrification; nitrate/nitrite and nitrate/ammonia respiration; fermentative nitrate reduction).

Fermentation - Alcohol fermentation and Pasteur effect; Lactate fermentation (homofermentative and heterofermentative pathways), concept of linear and branched fermentation pathways.

Unit 5 Chemolithotrophic and Phototrophic Metabolism

Introduction to aerobic and anaerobic chemolithotrophy with an example each. Hydrogen oxidation (definition and reaction) and methanogenesis (definition and reaction).

Introduction to phototrophic metabolism - groups of phototrophic microorganisms, anoxygenic vs. oxygenic photosynthesis with reference to photosynthesis in green bacteria and cyanobacteria.

Nitrogen Metabolism - an overview

Introduction to biological nitrogen fixation.

Ammonia assimilation.

Assimilatory nitrate reduction.

2. Study of semi-conservative replication of DNA through micrographs / schematic representations.
3. Isolation of genomic DNA from *E. coli*.
4. Estimation of salmon sperm / calf thymus DNA using colorimeter (diphenylamine reagent) and UV spectrophotometer (A260 measurement).
5. Estimation of RNA using colorimeter (orcinol reagent) and UV spectrophotometer (A260 measurement).
7. Resolution and visualization of DNA by Agarose Gel Electrophoresis.
8. Resolution and visualization of proteins by Polyacrylamide Gel Electrophoresis (SDS-PAGE).

BMB309A(P)**MICROBIAL METABOLISM (PRACTICAL)**

1. Study and plot the growth curve of *E. coli* by turbidometric and standard plate count methods.
2. Calculations of generation time and specific growth rate of bacteria from the graph plotted with the given data.
3. Effect of temperature on growth of *E. coli*.
4. Effect of pH on growth of *E. coli*.
5. Demonstration of alcoholic fermentation.
6. Demonstration of the thermal death time and decimal reduction time of *E. coli*.

BMB309B(P)**MICROBIAL GENETICS AND MOLECULAR BIOLOGY (PRACTICAL)**

1. Study of different types of DNA and RNA using micrographs and model / schematic representations.
2. Study of semi-conservative replication of DNA through micrographs / schematic representations.
3. Estimation of salmon sperm / calf thymus DNA using colorimeter (diphenylamine reagent) or UV spectrophotometer (A260 measurement).
4. Resolution and visualization of DNA by Agarose Gel Electrophoresis.
5. Resolution and visualization of proteins by Polyacrylamide Gel Electrophoresis (SDS-PAGE).
6. Study the effect of chemical (HNO₂) and physical (UV) mutagens on bacterial cells.

7. Study survival curve of bacteria after exposure to ultraviolet (UV) light.
8. Demonstration of Bacterial Transformation and calculation of transformation efficiency.

BMB401**MICROBIAL GENETICS AND GENOMICS****Unit 1 Genome Organization and Mutations**

Genome organization: *E. coli*, *Saccharomyces*, *Tetrahymena*.

Organelle genome: Chloroplast and Mitochondria.

Mutations and mutagenesis: Definition and types of Mutations; Physical and chemical mutagens; Molecular basis of mutations; Functional mutants (loss and gain of function mutants); Uses of mutations.

Reversion and suppression: True revertants; Intra- and inter-genic suppression; Ames test; Mutator genes.

Unit 2 Plasmids

Types of plasmids – F plasmid, R Plasmids, colicinogenic plasmids, Ti plasmids, linear plasmids, yeast-2 μ plasmid, Plasmid replication and partitioning, Host range, plasmid-incompatibility, plasmid amplification, Regulation of copy number, curing of plasmids.

Unit 3 Mechanisms of Genetic Exchange Transformation - Discovery, mechanism of natural competence.

Conjugation - Discovery, mechanism, Hfr and F' strains, Interrupted mating technique and time of entry mapping.

Transduction - Generalized transduction, specialized transduction, LFT & HFT lysates, Mapping by recombination and co-transduction of markers.

Unit 4 Phage Genetics Features of T4 genetics, Genetic basis of lytic *versus* lysogenic switch of phage lambda.

Unit 5 Transposable elements

Prokaryotic transposable elements – Insertion Sequences, composite and non-composite transposons, Replicative and Non replicative transposition, Mu transposon.

Eukaryotic transposable elements - Yeast (Ty retrotransposon), Drosophila (P elements), Maize (Ac/Ds).

Uses of transposons and transposition.

BMB402**ENVIRONMENTAL MICROBIOLOGY****Unit 1 Microorganisms and their Habitats**

Structure and function of ecosystems.

Terrestrial Environment: Soil profile and soil microflora.

Aquatic Environment: Microflora of fresh water and marine habitats.

Atmosphere: Aeromicroflora and dispersal of microbes.

Animal Environment: Microbes in/on human body (Microbiomics) & animal (ruminants) body. Extreme Habitats: Extremophiles: Microbes thriving at high & low temperatures, pH, high hydrostatic & osmotic pressures, salinity, & low nutrient levels.

Microbial succession in decomposition of plant organic matter.

Unit 2 Microbial Interactions

Microbe interactions: Mutualism, synergism, commensalism, competition, amensalism, parasitism, predation.

Microbe-Plant interaction: Symbiotic and non symbiotic interactions.

Microbe-animal interaction: termite gut microflora, nematophagus fungi and symbiotic luminescent bacteria.

Unit 3 Biogeochemical Cycling

Carbon cycle: Microbial degradation of cellulose, hemicelluloses, lignin and chitin.

Nitrogen cycle: Nitrogen fixation, ammonification, nitrification, denitrification and nitrate reduction.

Phosphorus cycle: Phosphate immobilization and solubilisation.

Sulphur cycle: Microbes involved in sulphur cycle.

Other elemental cycles: Iron and manganese.

Unit 4 Waste Management

Solid Waste management: Sources and types of solid waste, Methods of solid waste disposal (composting and sanitary landfill).

Liquid waste management: Composition and strength of sewage (BOD and COD), Primary, secondary (oxidation ponds, trickling filter, activated sludge process and septic tank) and tertiary sewage treatment.

Unit 5 Microbial Bioremediation

Principles and degradation of common pesticides, organic (hydrocarbons, oil spills) and inorganic (metals) matter, biosurfactants.

Water Portability

Treatment and safety of drinking (potable) water, methods to detect potability of water samples: (a) standard qualitative procedure: presumptive test/MPN test, confirmed and completed tests for faecal coliforms (b) Membrane filter technique and (c) Presence/absence tests.

BMB403

FOOD AND DAIRY MICROBIOLOGY

Unit 1 Foods as a substrate for microorganisms

Intrinsic and extrinsic factors that affect growth and survival of microbes in foods, natural flora and source of contamination of foods in general.

Microbial spoilage of various foods Principles, Spoilage of vegetables, fruits, meat, eggs, milk and butter, bread, canned foods.

Unit 2 Principles and methods of food preservation

Principles, physical methods of food preservation: temperature (low, high, canning, drying), irradiation, hydrostatic pressure, high voltage pulse, microwave processing and aseptic packaging, chemical methods of food preservation: salt, sugar, organic acids, SO₂, nitrite and nitrates, ethylene oxide, antibiotics and bacteriocins.

Unit 3 Fermented foods

Dairy starter cultures, fermented dairy products: yogurt, acidophilus milk, kumiss, kefir, dahi and cheese, other fermented foods: dosa, sauerkraut, soy sauce and tampeh, Probiotics: Health benefits, types of microorganisms used, probiotic foods available in market.

Unit 4 Food borne diseases (causative agents, foods involved, symptoms and preventive measures)

Food intoxications: Staphylococcus aureus, Clostridium botulinum and mycotoxins; Food infections: Bacillus cereus, Vibrio parahaemolyticus, Escherichia coli, Salmonellosis, Shigellosis, Yersinia enterocolitica, Listeria monocytogenes and Campylobacter jejuni.

Unit 5 Food sanitation and control

HACCP, Indices of food sanitary quality and sanitizers.

Cultural and rapid detection methods of food borne pathogens in foods and introduction to predictive microbiology.

BMB404A

FOOD FERMENTATION TECHNIQUES

Unit 1 Fermented foods

Definition, types, advantages and health benefits.

Unit 2 Milk based fermented foods

Dahi, Yogurt, Buttermilk (Chach) and cheese: Preparation of inoculums, types of microorganisms and production process.

Unit 3 Grain based fermented foods

Soy sauce, Bread, Idli and Dosa: Microorganisms and production process.

Unit 4 Vegetable based fermented foods

Pickles, Saeurkraut: Microorganisms and production process.

Unit 5 Fermented meat and fish

Types, microorganisms involved, fermentation process.

Probiotic foods

Definition, types, microorganisms and health benefits.

BMB404B**MANAGEMENT OF HUMAN MICROBIAL DISEASES****Unit 1 Introduction to Human Microbial Diseases**

Definition and concept of health, disease, Infection and Pathogen.

Types of human microbial diseases and their transmission, causative agents and symptoms of human microbial diseases: Respiratory microbial diseases, gastrointestinal microbial diseases, nervous system diseases, skin diseases, eye diseases, urinary tract diseases, sexually transmitted diseases, mosquito borne disease, Microbial mediated cancers and Nosocomial infections.

Recent outbreaks of human microbial diseases (SARS/ Swine flu/Ebola) – causes, spread and control.

Unit 2 Diagnosis of Human Microbial diseases

Various serological and molecular methods for diagnosis of microbial diseases.

Detection by diagnostic kits based on ELISA, Immunofluorescence, Agglutination tests, PCR, DNA probes (illustrate each with one example).

Unit 3 Therapeutics of Microbial diseases

Treatment using antibiotics: Mechanism of action of antibiotics belonging to different classes: beta lactam antibiotics (penicillin, cephalosporins),

Unit 4

Quinolones, polypeptides and aminoglycosides. Judicious use of antibiotics, importance of completing antibiotic regimen, Concept of DOTS, emergence of antibiotic resistance, current issues of MDR/XDR microbial strains.

Treatment using antiviral agents: Mechanism of action of Amantadine, Acyclovir, Azidothymidine. Concept of HAART.

Unit 5 Prevention of Microbial Diseases

General preventive measures, Importance of personal hygiene, environmental sanitation and methods to prevent the spread of infectious agents transmitted by direct contact, food, water and insect vectors. Vaccines: Importance, types, vaccines available against microbial diseases, vaccination schedule (compulsory and preventive) in the Indian context.

BMB404C

MICROBIOLOGICAL ANALYSIS OF AIR AND WATER

Unit 1 Aeromicrobiology

Bioaerosols, Air borne microorganisms (bacteria, Viruses, fungi) and their impact on human health and environment, significance in food and pharma industries and operation theatres, allergens.

Unit 2 Air sample collection and analysis

Bioaerosol sampling, air samplers, methods of analysis, CFU, culture media for bacteria and fungi, Identification characteristics.

Unit 3 Control measures

Fate of bioaerosols, inactivation mechanisms – UV light, HEPA filters, desiccation, Incineration.

Unit 4 Water Microbiology

Water borne pathogens, water borne diseases.

Unit 5 Microbiological analysis of water

Sample Collection, Treatment and safety of drinking (potable) water, methods to detect potability of water samples: (a) standard qualitative procedure: presumptive test (MPN test), confirmed and completed tests for faecal coliforms (b) Membrane filter technique and (c) Presence/absence tests.

Control measures

Precipitation, chemical disinfection, filtration, high temperature, UV light.

FUNDAMENTALS OF BIOINFORMATICS

Unit 1 Introduction to Bioinformatics

Bioinformatics – Definition and Applications

Information Flow in Biology, DNA Structure, RNA Structure Protein Structure Genome

(Prokaryotic and Eukaryotic), Genome sequencing

Unit 2 Biological Databases

RDBMS, Biological databases - nucleic acid, genome, protein sequence and structure, gene expression databases, Database of metabolic pathways

Mode of data storage - File formats - FASTA, Genbank and Uniprot,

Data submission & retrieval from NCBI, EMBL, Uniprot, PDB

Unit 3 Sequence Alignments, Phylogeny and Phylogenetic trees

Local and Global Sequence alignment, pairwise and multiple sequence alignment. Molecular Phylogeny, Softwares for phylogeny

Unit 4 Protein Structure Predictions

Hierarchy of protein structure - primary, secondary and tertiary structures, modelling (Homology) Structural Classes,

Unit 5

Motifs, Folds and Domains

Protein structure and rational drug design

BMB405A**INDUSTRIAL AND FOOD MICROBIOLOGY****Unit 1 Introduction to Industrial microbiology**

Brief history and developments in industrial microbiology.

Types of fermentation processes - solid state, liquid state, batch, fed-batch and continuous.

Types of fermenters – laboratory, pilot-scale and production fermenters.

Components of a typical continuously stirred tank bioreactor.

Unit 2 Isolation of industrial strains and fermentation medium

Primary and secondary screening.

Preservation and maintenance of industrial strains.

Ingredients used in fermentation medium - molasses, corn steep liquor, whey & yeast extract.

Unit 3 Microbial fermentation processes

Downstream processing - filtration, centrifugation, cell disruption, solvent extraction.

Microbial production of industrial products - citric acid, ethanol and penicillin.

Industrial production and uses of the enzymes - amylases, proteases, lipases and cellulases.

Unit 4 Food as a substrate for microbial growth

Intrinsic and extrinsic parameters that affect microbial growth in food.

Microbial spoilage of food - milk, egg, bread and canned foods.

Principles and methods of food preservation and food sanitation

Physical methods - high temperature, low temperature, irradiation, aseptic packaging.

Chemical methods - salt, sugar, benzoates, citric acid, ethylene oxide, nitrate and nitrite.

Food sanitation and control – HACCP.

Unit 5 Dairy products, probiotics and Food-borne Diseases

Fermented dairy products - yogurt, acidophilus milk, kefir, dahi and cheese.

Probiotics definition, examples and benefits.

Food intoxication by *Clostridium botulinum* and *Staphylococcus aureus*.

Food infection by *Salmonella* and *E.coli*.

BMB405C

MEDICAL MICROBIOLOGY AND IMMUNOLOGY

Unit 1 Normal microflora of the human body and host pathogen interaction

Normal microflora of the human body: Importance of normal microflora, normal microflora of skin, throat, gastrointestinal tract, urogenital tract. Host pathogen interaction: Definitions - Infection, Invasion, Pathogen, Pathogenicity, Virulence, Toxigenicity, Carriers and their types, Opportunistic infections, Nosocomial infections. Transmission of infection.

Unit 2 Sample collection, transport and diagnosis Collection, transport and culturing of clinical samples and their identification characteristics.

Bacterial diseases

List of diseases of various organ systems and their causative agents.

Viral diseases

List of diseases of various organ systems and their causative agents.

Protozoan diseases

List of diseases of various organ systems and their causative agents.

Fungal diseases

Brief description of various types of mycoses.

Unit 3 Antimicrobial agents: General characteristics and mode of action

Antibacterial agents: Five modes of action with one example each: Inhibitor of nucleic acid synthesis; Inhibitor of cell wall synthesis; Inhibitor of cell membrane function; Inhibitor of protein synthesis; Inhibitor of metabolism.

Antifungal agents: Mechanism of action of Amphotericin B, Griseofulvin.

Antiviral agents: Mechanism of action of Amantadine, Acyclovir, Azidothymidine.

Unit 4 Immune Cells and Organs

Structure, Functions and Properties of: Immune Cells – Stem cell, T cell, B cell, NK cell, Macrophage, Neutrophil, Eosinophil, Basophil, Mast cell, Dendritic cell; and Immune Organs – Bone Marrow, Thymus, Lymph Node, Spleen.

Antigens and Antibodies

Characteristics of an antigen (Foreignness, Molecular size and Heterogeneity); Haptens; Epitopes (T & B cell epitopes), Adjuvants, Structure, Types and Functions of antibodies.

Unit 5 Generation of Immune Response Primary and Secondary Immune Response; Generation of Humoral Immune Response (Plasma Memory cells); Generation of Cell Mediated and Immune Response.

Immunological Disorders and Tumor Immunity

Types of Autoimmunity and Hypersensitivity with examples; Immunodeficiencies - Animal models (Nude and SCID mice).

Immunological Techniques

Principles of Precipitation, Agglutination, Immunodiffusion, Immunoelectrophoresis, ELISA, ELISPOT.

BMB405D**GENETIC ENGINEERING AND BIOTECHNOLOGY****Unit 1 Introduction to genetic engineering**

Milestones in genetic engineering and biotechnology.

Restriction modification systems: Mode of action, applications of Type II restriction enzymes in genetic engineering.

DNA modifying enzymes and their applications: DNA polymerases. Terminal deoxynucleotidyl transferase, kinases and phosphatases, and DNA ligases. Cloning: Use of linkers and adaptors.

Transformation of DNA: Chemical method, Electroporation.

Methods of DNA, RNA and Protein analysis: Agarose gel electrophoresis, Southern - and Northern - blotting techniques, dot blot, DNA microarray analysis, SDS-PAGE and Western blotting.

Unit 2 Vectors

Cloning Vectors: Definition and Properties.

Plasmid vectors: pBR and pUC series.

Bacteriophage lambda and M13 based vectors.

Cosmids, BACs, YACs.

Expression vectors: *E.coli* lac and T7 promoter-based vectors, yeast Ylp, YEp and YCp vectors, Baculovirus based vectors, mammalian SV40-based expression vectors.

Unit 3 DNA Amplification and DNA sequencing

PCR: Basics of PCR, RT-PCR, Real-Time PCR.

Genomic and cDNA libraries: Preparation and uses, Genome sequencing.

Sanger's method of DNA Sequencing: traditional and automated sequencing.

Unit 4 Application of Genetic Engineering and Biotechnology

Gene delivery: Microinjection, electroporation, biolistic method (gene gun), liposome and viral-mediated delivery, *Agrobacterium* - mediated delivery.

Products of recombinant DNA technology: Products of human therapeutic interest - insulin, hGH, antisense molecules. Bt transgenic - cotton, brinjal, flava savo tomato, Gene therapy, recombinant vaccine, protein engineering.

Unit 5 Intellectual Property Rights

Patents, Copyrights, Trademarks.

6. Preparation of yogurt.

BMB409B(P)**MICROBES IN ENVIRONMENT (PRACTICAL)**

1. Analysis of soil - pH, moisture content, water holding capacity, percolation, capillary action.
2. Isolation of microbes (bacteria & fungi) from soil (28°C & 45°C).
3. Isolation of microbes (bacteria & fungi) from rhizosphere and rhizoplane.
4. Assessment of microbiological quality of water.
5. Determination of BOD of waste water sample.
6. Study the presence of microbial activity by detecting (qualitatively) enzymes (dehydrogenase, amylase, urease) in soil.
7. Isolation of *Rhizobium* from root nodules.

BMB409C(P)**MEDICAL MICROBIOLOGY AND IMMUNOLOGY (PRACTICAL)**

1. Identify pathogenic bacteria on the basis of cultural, morphological and biochemical characteristics: IMViC, TSI, nitrate reduction, urease production and catalase tests.
2. Study of composition and use of important differential media for identification of pathogenic bacteria: EMB Agar, McConkey agar, Mannitol salt agar, Deoxycholate citrate agar, TCBS.
3. Study of bacterial flora of skin by swab method.
4. Perform antibacterial sensitivity by Kirby-Bauer method.
5. Identification of human blood groups.
6. To perform Total Leukocyte Count of the given blood sample.
7. To perform Differential Leukocyte Count of the given blood sample.
8. To separate serum from the blood sample (demonstration).
9. To perform immunodiffusion by Ouchterlony method.

BMB409D(P)**GENETIC ENGINEERING AND BIOTECHNOLOGY (PRACTICAL)**

1. Isolation of Plasmid DNA from *E.coli*.
2. Digestion of DNA using restriction enzymes and analysis by agarose gel electrophoresis.
3. Ligation of DNA fragments.
4. Interpretation of sequencing gel electropherograms.
5. Designing of primers for DNA amplification.
6. Amplification of DNA by PCR.
7. Demonstration of Southern blotting.

R A I P U R

BMB501

INDUSTRIAL MICROBIOLOGY

Unit 1 Introduction to industrial microbiology and fermentation processes

Brief history and developments in industrial microbiology.
Types of fermentation processes - Solid-state and liquid-state (stationary and submerged) fermentations; batch, fed-batch (eg. baker's yeast) and continuous fermentations.

Unit 2 Types of bio-reactors and measurement of fermentation parameters

Components of a typical bio-reactor, Types of bioreactors-Laboratory, pilot- scale and production fermenters, constantly stirred tank and air-lift fermenters, Measurement and control of fermentation parameters - pH, temperature, dissolved oxygen, foaming and aeration.

Unit 3 Isolation of industrially important microbial strains and fermentation media

Sources of industrially important microbes and methods for their isolation, preservation and maintenance of industrial strains, strain improvement, Crude and synthetic media; molasses, corn-steep liquor, sulphite waste liquor, whey, yeast extract and protein hydrolysates.

Unit 4 Down-stream processing

Cell disruption, filtration, centrifugation, solvent extraction, precipitation, lyophilization and spray drying.

Unit 5 Microbial production of industrial products (micro-organisms involved, media, fermentation conditions, downstream processing and uses)

Citric acid, ethanol, glutamic acid, Vitamin B12. Enzymes (amylase, protease, lipase).
Wine, beer. Antibiotics – Penicillin, Streptomycin.

Enzyme immobilization

Methods of immobilization, advantages and applications of immobilization, large scale applications of immobilized enzymes (glucose isomerase and penicillin acylase).

SUGGESTED READINGS

BMB502**IMMUNOLOGY****Unit 1 Introduction**

Concept of Innate and Adaptive immunity; Contributions of following scientists to the development of field of immunology - Edward Jenner, Karl Landsteiner, Robert Koch, Paul Ehrlich, Elie Metchnikoff, Peter Medawar, MacFarlane Burnet, Neils K Jerne, Rodney Porter and Susumu Tonegawa.

Unit 2 Immune Cells and Organs

Structure, Functions and Properties of: Immune Cells – Stem cell, T cell, B cell, NK cell, Macrophage, Neutrophil, Eosinophil, Basophil, Mast cell, Dendritic cell; and Immune Organs – Bone Marrow, Thymus, Lymph Node, Spleen, GALT, MALT, CALT.

Antigens

Characteristics of an antigen (Foreignness, Molecular size and Heterogeneity); Haptens; Epitopes (T & B cell epitopes); T-dependent and T-independent antigens; Adjuvants.

Unit 3 Antibodies

Structure, Types, Functions and Properties of antibodies; Antigenic determinants on antibodies (Isotypic, allotypic, idiotypic); VDJ rearrangements; Monoclonal and Chimeric antibodies.

Major Histocompatibility Complex

Organization of MHC locus (Mice & Human); Structure and Functions of MHC I & II molecules; Antigen processing and presentation (Cytosolic and Endocytic pathways).

Unit 4 Complement System

Components of the Complement system; Activation pathways (Classical, Alternative and Lectin pathways); Biological consequences of complement Activation.

Generation of Immune Response

Primary and Secondary Immune Response; Generation of Humoral Immune Response (Plasma and Memory cells); Generation of Cell Mediated Immune Response (Self MHC restriction, T cell activation, Co- stimulatory signals); Killing Mechanisms by CTL and NK cells, Introduction to tolerance.

Unit 5 Immunological Disorders and Tumor Immunity

Types of Autoimmunity and Hypersensitivity with examples; Immunodeficiencies - Animal models (Nude and SCID mice), SCID, DiGeorge syndrome, Chediak- Higashi syndrome, Leukocyte adhesion deficiency, CGD; Types of tumors, tumor Antigens, causes and therapy for cancers.

Immunological Techniques

Principles of Precipitation, Agglutination, Immunodiffusion, Immunoelectrophoresis, ELISA, ELISPOT, Western blotting, Immunofluorescence, Flow cytometry, Immunoelectron microscopy.

BMB507

Soft Skill & Personality Enhancement

Unit – I

- (I) Team Building – The magic of synergy, characteristics of an effective team, essentials of an effective team, Team Dynamics, Team Leading, Managing a Team.
- (II) Art of Negotiation –To understand what is negotiation, Ways of negotiating and being successful in it, To understand the power of language and non-verbal communication.
- (III) Grooming –To learn selection of proper attire as per the place, Practiced perception, How to carry one's self, How to project one's self in the positive frame and spirit.

Unit – II

- (I) Organising Meetings – How to announce, call and organize a meeting in a smooth manner, How to design Agenda and prepare Minutes of Meeting
- (II) Telephonic Etiquettes –Learn the tone and pitch of voice while speaking over phone, How to send a voice mail.
- (III) Business Etiquettes –What does business etiquettes mean, Professional and Cultural expectations, Effective writing, Corporate Communication, Interaction with foreign clients.

Unit –III

- (I) Stress Management –Types of stress, Symptoms and causes of Stress, Power of perception, Reaction to stress, Stress Management techniques.
- (II) Time Management – Importance of Time Management, Prioritising Tasks, Goal setting, Barriers to Time Management , Planning Routine and Time Tables.
- (III) Self Management –Self evaluation, Self discipline, Self criticism, SWOT analysis, Self Awareness, Development of the Self.

Unit – IV

- (I) Presentation Skills –How to prepare a presentation, Knowing the audience and their requirements, Effective ways to deliver presentation, How to prepare Multimedia presentation.
- (II) Organisational Skills – How to understand the nature and structure of organisation, To understand hierarchy and communication channel of the organisation, Clarity about the roles and responsibilities in an organisation, How to be a team member, How to draft reports
- (III) Leadership Skills

Unit – V

- (I) Group Discussion – Understanding the nature of discussion, Difference between debate and discussion, Ways to form and present arguments, Ways to defend your point.
- (II) Personal Interview –To learn the skills of appearing in an interview and being successful in it.
- (III) Public Speaking – Art of public speaking, To know the rhetoric of making a public speech, exploring rhetorical elements through various ideas..
- (IV) Conference and Meeting, Participation and Technical clarity in conference and meeting, Learning to listen and respond, Final Report drafting.

Reference Books:-

1. Soft Skill for everyone –Jeff Butterfield
2. Soft Skill for-S.I. Hariharan -MJP Publications
3. Personality Development & Soft skill – Goyal Brothers Prakashan

BMB503A

BIOINFORMATICS

Unit 1 Introduction to Computer Fundamentals

RDBMS - Definition of relational database.

Mode of data transfer (FTP, SFTP, SCP), advantage of encrypted data transfer.

Unit 2 Introduction to Bioinformatics and Biological Databases

Biological databases - nucleic acid, genome, protein sequence and structure, gene expression databases, Database of metabolic pathways, Mode of data storage - File formats - FASTA, Genbank and Uniprot, Data submission & retrieval from NCBI, EMBL, DDBJ, Uniprot, PDB.

Unit 3 Sequence Alignments, Phylogeny and Phylogenetic trees

Local and Global Sequence alignment, pairwise and multiple sequence alignment.

Scoring an alignment, scoring matrices, PAM & BLOSUM series of matrices.

Types of phylogenetic trees, Different approaches of phylogenetic tree construction-UPGMA, Neighbour joining, Maximum Parsimony, Maximum likelihood.

Unit 4 Genome organization and analysis

Diversity of Genomes: Viral, prokaryotic & eukaryotic genomes.

Genome, transcriptome, proteome, 2-D gel electrophoresis, MALDI- TOF spectrometry.

Major features of completed genomes: *E.coli*, *S.cerevisiae*, *Arabidopsis*, Human.

Unit 5 Protein Structure Predictions

Hierarchy of protein structure - primary, secondary and tertiary structures, modeling

Structural Classes, Motifs, Folds and Domains.

Protein structure prediction in presence and absence of structure template.

Energy minimizations and evaluation by Ramachandran plot.

Protein structure and rational drug design.

BMB503B

PLANT PATHOLOGY**Unit 1 Introduction and History of plant pathology**

Concept of plant disease- definitions of disease, disease cycle & pathogenicity, symptoms associated with microbial plant diseases, types of plant pathogens, economic losses and social impact of plant diseases. Significant landmarks in the field of plant pathology- Contributions of Anton DeBary, Millardet, Burrill, E. Smith, Adolph Mayer, Ivanowski, Diener, Stakman, H.H. Flor, Van Der Plank, molecular Koch's postulates. Contributions of eminent Indian plant pathologists (K.C.Mehta, Mundkur, Dastur and Sadasivan).

Unit 2 Stages in development of a disease

Infection, invasion, colonization, dissemination of pathogens and perennation.

Plant disease epidemiology

Concepts of monocyclic, polycyclic and polyetic diseases, disease triangle & disease pyramid, forecasting of plant diseases and its relevance in Indian context.

Unit 3 Host Pathogen Interaction**A. Microbial Pathogenicity**

Virulence factors of pathogens: enzymes, toxins (host specific and non specific) growth regulators, virulence factors in viruses (replicase, coat protein, silencing suppressors) in disease development. Effects of pathogens on host physiological processes (photosynthesis, respiration, cell membrane permeability, translocation of water and nutrients, plant growth and reproduction). B. *Genetics of Plant Diseases*

Concept of resistance (R) gene and avirulence (avr) gene; gene for gene hypothesis, types of plant resistance: true resistance– horizontal & vertical, apparent resistance. C. *Defense Mechanisms in Plants*

Concepts of constitutive defense mechanisms in plants, inducible structural defenses (histological-cork layer, abscission layer, tyloses, gums), inducible biochemical defenses [hypersensitive response (HR), systemic acquired resistance (SAR), phytoalexins, pathogenesis related (PR) proteins, plantibodies, phenolics, quinones, oxidative bursts].

Unit 4 Control of Plant Diseases

Principles & practices involved in the management of plant diseases by different methods, viz. regulatory - quarantine, crop certification, avoidance of pathogen, use of pathogen free propagative material.

cultural - host eradication, crop rotation, sanitation, polyethylene traps and mulches.

chemical - protectants and systemic fungicides, antibiotics, resistance of pathogens to chemicals.

biological - suppressive soils, antagonistic microbes-bacteria and fungi, trap plants.

genetic engineering of disease resistant plants- with plant derived genes and pathogen derived genes.

Unit 5 Specific Plant diseases

Study of some important plant diseases giving emphasis on its etiological agent, symptoms, epidemiology and control

A. Important diseases caused by fungi:

White rust of crucifers - *Albugo candida*.

Late blight of potato - *Phytophthora infestans*.

Ergot of rye - *Claviceps purpurea*.

Black stem rust of wheat - *Puccinia graminis tritici*.

Red rot of sugarcane - *Colletotrichum falcatum*.

B. Important diseases caused by phytopathogenic bacteria: Angular leaf spot of cotton and crown gall.

SUGGESTED READINGS

4. Rangaswami G. (2005). Diseases of Crop Plants in India. 4th edition. Prentice Hall of India Pvt. Ltd., New Delhi.

BMB503C**INHERITANCE BIOLOGY****Unit 1 Introduction to Genetics**

Historical developments

Model organisms in genetic analyses and experimentation: *Escherichia coli*, *Saccharomyces cerevisiae*, *Neurospora crassa*, *Caenorhabditis elegans*, *Drosophila melanogaster*, *Arabidopsis thaliana*.

Unit 2 Mendelian Principles

Mendel's Laws: Dominance, segregation, independent assortment, deviation from Mendelian inheritance, Rediscovery of Mendel's principles, Chromosome theory of inheritance: Allele, multiple alleles, pseudoallele, complementation tests, Extensions of Mendelian genetics: Allelic interactions, concept of dominance, recessiveness, Incomplete dominance and co-dominance, Multiple alleles, Epistasis, penetrance and expressivity.

Unit 3 Linkage and Crossing over

Linkage and recombination of genes, Cytological basis of crossing over, Crossing over at four-strand stage, Molecular mechanism of crossing over, mapping.

Unit 4 Characteristics of Chromosomes

Structural organization of chromosomes - centromeres, telomeres and repetitive DNA, Packaging DNA molecules into chromosomes, Concept of euchromatin and heterochromatin, Normal and abnormal karyotypes of human chromosomes, Chromosome banding, Giant chromosomes: Polytene and lampbrush chromosomes, Variations in chromosome structure: Deletion, duplication, inversion and translocation, Variation in chromosomal number and structural abnormalities - Klinefelter syndrome, Turner syndrome, Down syndrome.

Recombination

Homologous and non-homologous recombination, including transposition, site-specific recombination.

Unit 5 Extra-Chromosomal Inheritance

Introduction and Rules of extra nuclear inheritance, Organelle heredity - Chloroplast mutations in *Chlamydomonas*, mitochondrial, mutations in *Saccharomyces*, Maternal effects - Shell coiling in *Limnaea peregra*.

Infectious heredity - Kappa particles in *Paramecium*.

Epigenetics.

Human genetics

Pedigree analysis, lod score for linkage testing, karyotypes, genetic disorders.

Quantitative genetics

Polygenic inheritance, heritability and its measurements, QTL mapping.

BMB503D**BIOMATHEMATICS AND BIOSTATISTICS****Unit 1**

Sets. Functions and their graphs: polynomial, sine, cosine, exponential and logarithmic functions.

Motivation and illustration for these functions through projectile motion, simple pendulum, biological rhythms, cell division, muscular fibres etc.

Unit 2

Simple observations about these functions like increasing, decreasing and, periodicity.

Sequences to be introduced through the examples arising in Science beginning with finite sequences, followed by concepts of recursion and difference equations. For instance, the Fibonacci sequence arising from branching habit of trees and breeding habit of rabbits. Intuitive idea of algebraic relationships and convergence.

Infinite Geometric Series. Series formulas for e^x , $\log(1+x)$, $\sin x$, $\cos x$. Step function.

Intuitive idea of discontinuity, continuity and limits.

Unit 3

Differentiation. Conception to be motivated through simple concrete examples as given above from Biological and Physical Sciences. Use of methods of differentiation like Chain rule, Product rule and Quotient rule. Second order derivatives of above functions.

Integration as reverse process of differentiation.

Integrals of the functions introduced above. Differential Equations of first order, Linear Differential Equations.

Points in plane and space and coordinate form. Examples of matrices arising in Biological Sciences and Biological networks. Sum and Product of matrices upto order 3.

Unit 4

Measures of central tendency, Measures of dispersion; skewness, kurtosis; Elementary Probability and basic laws; Discrete and Continuous Random variable, Mathematical Expectation; Curve Fitting; Correlation and Regression. Emphasis on examples from Biological Sciences;

Mean and Variance of Discrete and Continuous Distributions namely Binomial, Poisson, Geometric, Weibull, Logistic and Normal distribution. Fitting of Distributions;

Unit 5

Statistical methods: Scope of statistics: utility and misuse. Principles of statistical analysis of biological data. Sampling parameters. Difference between sample and Population, Sampling Errors, Censoring, difference between parametric and non-parametric statistics;

Sampling Distributions, Standard Error, Testing of Hypothesis, Level of Significance and Degree of Freedom;

Large Sample Test based on Normal Distribution, Small sample test based on t-test, Z- test and F test; Confidence Interval; Distribution-free test - Chi-square test;

Basic introduction to Multivariate statistics, etc.

BMB504P**INDUSTRIAL MICROBIOLOGY (PRACTICAL)**

1. Study different parts of fermenter.
2. Microbial fermentations for the production and estimation (qualitative and quantitative) of:
 - (a) Enzymes: Amylase and Protease.
 - (b) Amino acid: Glutamic acid.
 - (c) Organic acid: lactic acid/ Acetic Acid
 - (d) Alcohol: Ethanol.
3. A visit to any educational institute/industry to see an industrial fermenter, and other downstream processing operations.

BMB505P**IMMUNOLOGY (PRACTICAL)**

1. Identification of human blood groups.
2. Perform Total Leukocyte Count of the given blood sample.
3. Perform Differential Leukocyte Count of the given blood sample.
4. Separate serum from the blood sample (demonstration).
5. Perform immunodiffusion by Ouchterlony method.
6. Perform DOT ELISA.
7. Perform immunoelectrophoresis.

BMB506A(P)**BIOINFORMATICS (PRACTICAL)**

1. Introduction to different operating systems - UNIX, LINUX and Windows.
2. Introduction to bioinformatics databases (any three): NCBI/PDB/DDBJ, Uniprot, PDB.
3. Sequence retrieval using BLAST.
4. Sequence alignment & phylogenetic analysis using clustalW & phylip.
5. Picking out a given gene from genomes using Genscan or other softwares (promoter region identification, repeat in genome, ORF prediction). Gene finding tools (Glimmer, GENSCAN), Primer designing, Genscan/Genetool.
6. Protein structure prediction: primary structure analysis, secondary structure prediction using psi-pred, homology modeling using Swissmodel. Molecular visualization using jmol, Protein structure model evaluation (PROCHECK).
7. Prediction of different features of a functional gene.

BMB506B(P)**PLANT PATHOLOGY (PRACTICAL)**

1. Demonstration of Koch's postulates in fungal, bacterial and viral plant pathogens.
2. Study of important diseases of crop plants by cutting sections of infected plant material - *Albugo*, *Puccinia*, *Ustilago*, *Fusarium*, *Colletotrichum*.
3. Study of following diseases through photographs: bacterial leaf blight of rice, Angular leaf spot of cotton, crown galls, bacterial cankers of citrus, Aster yellow, citrus stubborn, Papaya ring spot, tomato yellow leaf curl, banana bunchy top, rice tungro disease, Potato spindle tuber, coconut cadang cadang disease.

BMB506C(P)**INHERITANCE BIOLOGY (PRACTICAL)**

1. Mendelian deviations in dihybrid crosses.
2. Studying Barr Body with the temporary mount of human cheek cells.
3. Studying *Rhoeo* translocation with the help of photographs.
4. Karyotyping with the help of photographs.
5. Chi-Square Analysis.
6. Study of polytene chromosomes using temporary mounts of salivary glands of *Chironomus* / *Drosophila* larvae.
7. Study of pedigree analysis.
8. Analysis of a representative quantitative trait.

R A I P U R

BMB506D(P)**BIOMATHEMATICS AND BIostatISTICS(PRACTICAL)**

1. Word Problems based on Differential Equations
2. Mean, Median, Mode from grouped and ungrouped Data set
3. Standard Deviation and Coefficient of Variation
4. Skewness and Kurtosis
5. Curve fitting
6. Correlation
7. Regression
8. Finding area under the curve using normal probability
9. Testing of Hypothesis- Normal Distribution, t-test and Chi-Square-test
10. Confidence Interval

RAIPUR

BMB601

MEDICAL MICROBIOLOGY

Unit 1 Normal microflora of the human body and host pathogen interaction

Normal microflora of the human body: Importance of normal microflora, normal microflora of skin, throat, gastrointestinal tract, urogenital tract.

Host pathogen interaction: Definitions - Infection, Invasion, Pathogen, Pathogenicity, Virulence, Toxicity, Carriers and their types, Opportunistic infections, Nosocomial infections. Transmission of infection, Pathophysiologic effects of LPS.

Unit 2 Sample collection, transport and diagnosis

Collection, transport and culturing of clinical samples, principles of different diagnostic tests (ELISA, Immunofluorescence, Agglutination based tests, Complement fixation, PCR, DNA probes).

Unit 3 Bacterial diseases

List of diseases of various organ systems and their causative agents. The following diseases in detail with Symptoms, mode of transmission, prophylaxis and control:

Respiratory Diseases: *Streptococcus pyogenes*, *Haemophilus influenzae*, *Mycobacterium tuberculosis*.

Gastrointestinal Diseases: *Escherichia coli*, *Salmonella typhi*, *Vibrio cholerae*, *Helicobacter pylori*.

Others: *Staphylococcus aureus*, *Bacillus anthracis*, *Clostridium tetani*, *Treponema pallidum*, *Clostridium difficile*.

Unit 4 Viral diseases

List of diseases of various organ systems and their causative agents. The following diseases in detail with Symptoms, mode of transmission, prophylaxis and control:

Polio, Herpes, Hepatitis, Rabies, Dengue, AIDS, Influenza with brief description of swine flu, Ebola, Chikungunya, Japanese Encephalitis.

Protozoan diseases

List of diseases of various organ systems and their causative agents. The following diseases in detail with Symptoms, mode of transmission, prophylaxis and control: Malaria, Kala-azar.

Unit 5 Fungal diseases

Brief description of each of the following types of mycoses and one representative disease to be studied with respect to transmission, symptoms and prevention: Cutaneous mycoses: Tinea pedis (Athlete's foot).

Systemic mycoses: Histoplasmosis.

Opportunistic mycoses: Candidiasis.

Antimicrobial agents: General characteristics and mode of action

Antibacterial agents: Five modes of action with one example each: Inhibitor of nucleic acid synthesis; Inhibitor of cell wall synthesis; Inhibitor of cell membrane function; Inhibitor of protein synthesis; Inhibitor of metabolism.

Antifungal agents: Mechanism of action of Amphotericin B, Griseofulvin. Antiviral

agents: Mechanism of action of Amantadine, Acyclovir, Azidothymidine Antibiotic resistance, MDR, XDR, MRSA, NDM-1.

BMB602**RECOMBINANT DNA TECHNOLOGY****Unit 1 Introduction to Genetic Engineering**

Milestones in genetic engineering and biotechnology.

Unit 2 Molecular Cloning- Tools and Strategies

Cloning Tools; Restriction modification systems: Types I, II and III. Mode of action, nomenclature, applications of Type II restriction enzymes in genetic engineering.

DNA modifying enzymes and their applications: DNA polymerases. Terminal deoxynucleotidyltransferase, kinases and phosphatases, and DNA ligases. Cloning Vectors: Definition and Properties.

Plasmid vectors: pBR and pUC series.

Bacteriophage lambda and M13 based vectors.

Cosmids, BACs, YACs.

Use of linkers and adaptors.

Expression vectors: *E.coli* lac and T7 promoter-based vectors, yeast Ylp, YEp and YCp vectors, Baculovirus based vectors, mammalian SV40-based expression vectors.

Unit 3 Methods in Molecular Cloning

Transformation of DNA: Chemical method, Electroporation.

Gene delivery: Microinjection, electroporation, biolistic method (gene gun), liposome and viral-mediated delivery, *Agrobacterium* - mediated delivery.

DNA, RNA and Protein analysis: Agarose gel electrophoresis, Southern - and Northern - blotting techniques, dot blot, DNA microarray analysis, SDS-PAGE, Gel Shift Assay and Western blotting.

Unit4 DNA Amplification and DNA sequencing PCR: Basics of PCR, RT-PCR, Real-Time PCR.

Sanger's method of DNA Sequencing: traditional and automated sequencing. Introduction to new generation sequencing.

Primer walking and shotgun sequencing.

Unit 5 Construction and Screening of Genomic and cDNA libraries

Genomic and cDNA libraries: Preparation and uses, Screening of libraries: Colony hybridization and colony PCR, Chromosome walking and chromosome jumping.

Applications of Recombinant DNA Technology

Products of recombinant DNA technology: Products of human therapeutic interest - insulin, hGH, antisense molecules. Bt transgenic - cotton, brinjal, Gene therapy, recombinant vaccines, protein engineering and site directed mutagenesis.

BMB603A**MICROBIAL BIOTECHNOLOGY****Unit 1 Microbial Biotechnology and its Applications**

Microbial biotechnology: Scope and its applications in human therapeutics, agriculture (Biofertilizers, PGPR, Mycorrhizae), environmental, and food technology.

Use of prokaryotic and eukaryotic microorganisms in biotechnological applications.

Genetically engineered microbes for industrial application: Bacteria and yeast.

Unit 2 Therapeutic and Industrial Biotechnology

Recombinant microbial production processes in pharmaceutical industries - Streptokinase, recombinant vaccines (Hepatitis B vaccine).

Microbial polysaccharides and polyesters, Microbial production of bio-pesticides, bioplastics

Microbial biosensors.

Unit 3 Applications of Microbes in Biotransformations

Microbial based transformation of steroids and sterols.

Bio-catalytic processes and their industrial applications: Production of high fructose syrup and production of cocoa butter substitute.

Unit 4 Microbial Products and their Recovery

Microbial product purification: filtration, ion exchange & affinity chromatography techniques

Immobilization methods and their application: Whole cell immobilization.

Unit 5 Microbes for Bio-energy and Environment

Bio-ethanol and bio-diesel production: commercial production from lignocellulosic waste and algal biomass, Biogas production: Methane and hydrogen production using microbial culture.

Microorganisms in bioremediation: Degradation of xenobiotics, mineral recovery, removal of heavy metals from aqueous effluents.

RNAi

RNAi and its applications in silencing genes, drug resistance, therapeutics and host pathogen interactions.

Intellectual Property Rights

Patents, Copyrights, Trademarks.

BMB603B

ADVANCES IN MICROBIOLOGY

Unit 1 Evolution of Microbial Genomes

Salient features of sequenced microbial genomes, core genome pool, flexible genome pool and concept of pangenome, Horizontal gene transfer (HGT), Evolution of bacterial virulence - Genomic islands, Pathogenicity islands (PAI) and their characteristics , CRISPR/CAS system.

Unit 2 Metagenomics

Brief history and development of metagenomics, Understanding bacterial diversity using metagenomics approach, Prospecting genes of biotechnological importance using metagenomics Basic knowledge of viral metagenome, metatranscriptomics, metaproteomics and metabolomics.

Unit 3 Molecular Basis of Host-Microbe Interactions

Epiphytic fitness and its mechanism in plant pathogens, Hypersensitive response (HR) to plant pathogens and its mechanism, Type three secretion systems (TTSS) of plant and animal pathogens,

Unit 4

Biofilms: types of microorganisms, molecular aspects and significance in environment, health care, virulence and antimicrobial resistance.

Unit 5 Systems and Synthetic Biology

Networking in biological systems, Quorum sensing and quenching in bacteria, Co-ordinated regulation of bacterial virulence factors, Basics of synthesis of poliovirus in laboratory, Future implications of synthetic biology with respect to bacteria and viruses.

R A I P U R

BMB603C**INSTRUMENTATION AND BIOTECHNIQUES****Unit 1 Microscopy**

Brightfield and darkfield microscopy, Fluorescence Microscopy, Phase contrast Microscopy, Electron Microscopy (Scanning and Transmission Electron Microscopy) and Micrometry.

Unit 2 Chromatography

Principles and applications of paper chromatography (including Descending and 2-D), Thin layer chromatography. Column packing and fraction collection. Gel filtration chromatography, ion-exchange chromatography and affinity chromatography, GLC, HPLC.

Unit 3 Electrophoresis

Principle and applications of native polyacrylamide gel electrophoresis, SDS- polyacrylamide gel electrophoresis, 2D gel electrophoresis Isoelectric focusing, Zymogram preparation and Agarose gel electrophoresis.

Unit 4 Spectrophotometry

Principle and use of study of absorption spectra of biomolecules. Analysis of biomolecules using UV and visible range. Colorimetry and turbidometry.

Unit 5 Centrifugation

Preparative and analytical centrifugation, fixed angle and swinging bucket rotors. RCF and sedimentation coefficient, differential centrifugation, density gradient centrifugation and ultracentrifugation.

BMB603D**BIOSAFETY AND INTELLECTUAL PROPERTY RIGHTS (IPR)****Unit 1**

Biosafety: Introduction; biosafety issues in biotechnology; Biological Safety Cabinets & their types; Primary Containment for Biohazards; Biosafety Levels of Specific Microorganisms.

Unit 2

Biosafety Guidelines: Biosafety guidelines and regulations (National and International); GMOs/LMOs- Concerns and Challenges; Role of Institutional Biosafety Committees (IBSC), RCGM, GEAC etc. for GMO applications in food and agriculture; Environmental release of GMOs; Risk Analysis; Risk Assessment; Risk management and communication; Overview of International Agreements - Cartagena Protocol.

Unit 3

AERB/RSD/RES guidelines for using radioisotopes in laboratories and precautions.

Introduction to Intellectual Property: Patents, Types, Trademarks, Copyright & Related Rights, Industrial Design and Rights, Traditional Knowledge, Geographical Indications- importance of IPR – patentable and non patentables – patenting life – legal protection of biotechnological inventions – World Intellectual Property Rights Organization (WIPO).

Unit 4

Grant of Patent and Patenting Authorities: Types of patent applications: Ordinary, PCT, Conventional, Divisional and Patent of Addition; An introduction to Patent Filing Procedures; Patent licensing and agreement; Patent infringement- meaning, scope, litigation, case studies, Rights and Duties of patent owner.

Unit 5

Agreements and Treaties: GATT, TRIPS Agreements; Role of Madrid Agreement; Hague Agreement; WIPO Treaties; Budapest Treaty on international recognition of the deposit of microorganisms; UPOV & Brene conventions; Patent Co-operation Treaty (PCT); Indian Patent Act 1970 & recent amendments.

BMB604P**Project Work**

Note:-

1. Number of students who will be offered project work will vary from college to college depending upon the infrastructural facilities and may vary each year.
2. The college shall announce regarding the number of seats for project work well in advance and may select the students for the same based on merit.
3. Project work will involve experimental work and the student will have to do this in the time after their regular theory and practical classes.
4. The final evaluation of the project work will be through a committee involving internal and external examiners.
5. Guidelines provided by University of Delhi for executing and evaluation of project work will be final.
6. Students will be asked their choice for Project work at the end of IV semester and all formalities of topic and mentor selection will be completed by this time.
7. Project work will be offered in lieu of any one Discipline Specific Elective and will be evaluated for 6 credits.

BMB605P**MEDICAL MICROBIOLOGY (PRACTICAL)**

1. Identify bacteria, *E. coli*, *Salmonella*, *Pseudomonas*, *Staphylococcus*, *Bacillus* (any three) on the basis of cultural, morphological and biochemical characteristics: IMViC, TSI, nitrate reduction, urease production and catalase tests.
2. Study of composition and use of important differential media for identification of bacteria: EMB Agar, Mannitol salt agar, Deoxycholate citrate agar, TCBS.
3. Study of bacterial flora of skin by swab method.
4. Perform antibacterial sensitivity by Kirby-Bauer method.
5. Study symptoms of the diseases with the help of photographs: Polio, anthrax, herpes, chicken pox, HPV warts, AIDS (candidiasis), dermatomycoses (ring worms).
6. Study of various stages of Malarial parasite in RBCs using permanent mounts/Photomicrographs.

BMB606P**RECOMBINANT DNA TECHNOLOGY (PRACTICAL)**

1. Preparation of competent cells for transformation.
2. Demonstration of Bacterial Transformation and calculation of transformation efficiency.
3. Digestion of DNA using restriction enzymes and analysis by agarose gel electrophoresis.
4. Ligation of DNA fragments.
5. Cloning of DNA insert and Blue white screening of recombinants.
6. Interpretation of sequencing gel electropherograms.
7. Designing of primers for DNA amplification.
8. Demonstration of Amplification of DNA by PCR.
9. Demonstration of Southern blotting.

BMB607A(P)**MICROBIAL BIOTECHNOLOGY (PRACTICAL)**

1. Study yeast cell immobilization in calcium alginate gels.
2. Study enzyme immobilization by calcium alginate method.
3. Pigment production from fungi (Trichoderma / Aspergillus / Penicillium).
4. Isolation of xylanase or lipase producing bacteria.
5. Study of algal Single Cell Proteins.
6. Hydrolysis of Starch/Polysaccharide/Lignocellulosic residue.
7. Biotransformation of steroid and its detection by a suitable method (TLC).
8. Demonstration of production of a recombinant product.

BMB607B(P)**ADVANCES IN MICROBIOLOGY (PRACTICAL)**

1. Extraction of metagenomic DNA from soil.
2. Understand the impediments in extracting metagenomic DNA from soil.
3. PCR amplification of metagenomic DNA using universal 16S ribosomal gene primers.
4. Case study to understand how the poliovirus genome was synthesized in the laboratory.
5. Case study to understand how networking of metabolic pathways in bacteria takes place.

BMB607C (P)**Instrumentation and Biotechniques (PRACTICAL)**

1. Study of fluorescent micrographs to visualize bacterial cells.
2. Ray diagrams of phase contrast microscopy and Electron microscopy.
3. Separation of mixtures by paper / thin layer chromatography.
4. To demonstrate column packing in any form of column chromatography.
5. Separation of protein mixtures by Polyacrylamide Gel Electrophoresis (PAGE).
6. Determination of λ_{max} for an unknown sample and calculation of extinction coefficient.
7. Separation of components of a given mixture using a laboratory scale centrifuge.
8. Understanding density gradient centrifugation with the help of pictures.

BMB607D (P)**BIOSAFETY AND INTELLECTUAL PROPERTY RIGHTS (IPR) (PRACTICAL)**

1. Study of components and design of a BSL-III laboratory.
2. Filing applications for approval from bio-safety committee (IBSC).
3. Filing primary applications for patents.
4. Study of steps of a patenting process.
5. A case study.
