SCHEME OF EXAMINATION & SYLLABUS

of

MCA

**Master of Computer Application
(w.e.f. 2021 – 2022)**

UNDER

Faculty of Information Technology

w.e.f. Session 2021-22

MCA (MASTER OF COMPUTER APPLICATION)
MCA FIRST YEAR, 2021-22

SEMESTER-I

Subject Code	Subject Name	Internal	External	Total	Credit
MCA101	Fundamental of Computers & Emerging Technologies	30	70	100	3
MCA102	Problem Solving using C	30	70	100	3
MCA103	Principles and Practices of Management	30	70	100	3
MCA104	Discrete Mathematics	30	70	100	3
MCA105	Computer Organization & Architecture	30	70	100	3
MCA106P	Problem Solving using C Lab	20	30	50	2
MCA107P	Computer Organization & Architecture Lab	20	30	50	2
MCA108P	Android Programming Lab	20	30	50	2
	Total	210	440	650	21

SEMESTER-II

Subject Code	Subject Name	Internal	External	Total	Credit
MCA201	Theory of Automata & Formal Languages	30	70	100	3
MCA202	Object Oriented Programming	30	70	100	3
MCA203	Operating Systems	30	70	100	3
MCA204	Database Management Systems	30	70	100	3
MCA205	Data Structures & Analysis of Algorithms	30	70	100	3
MCA206P	Object Oriented Programming Lab	20	30	50	2
MCA207P	DBMS Lab	20	30	50	2
MCA208P	Data Structures & Analysis of Algorithms Lab	20	30	50	2
	Total	210	440	650	21

* Student has to undergo for Mini Project/Internship Assessment completion of 2nd Semester which is to be evaluated in 3rd Semester

SEMESTER-III

Subject	Subject Name	Internal	External	Total	Credit
MCA301	Computer Network	30	70	100	4
MCA302	Artificial Intelligence	30	70	100	3
MCA303	Software Engineering & Testing	30	70	100	3
	ELECTIVE – I (Any One)	30	70	100	3
MCA304A	Cryptography & Network Security				
MCA304B	Data Warehousing & Data Mining				
MCA304C	Software Project Management				
MCA304D	Cloud Computing				
MCA304E	Compiler Design				
	ELECTIVE – II (Any One)	30	70	100	3
MCA305A	Web Technology				
MCA305B	Big Data Analytics				
MCA305C	Simulation & Modeling				
MCA305D	Digital Image Processing				
MCA306P	Artificial Intelligence Lab	20	30	50	2
MCA307P	Software Engineering & Testing-Lab	20	30	50	2
MCA308P	Mini Project**/Internship Assessment	20	30	50	1
Total		210	440	650	21

SEMESTER-IV

Subject	Subject Name	Internal	External	Total	Credit
	ELECTIVE –III (Any One)	30	70	100	3
MCA401A	Privacy & Security in Online Social Media				
MCA401B	Soft Computing				
MCA401C	Pattern Recognition				
MCA401D	Data Analytics				
MCA401E	Software Quality Engineering				
	ELECTIVE –IV (Any One)	30	70	100	3
MCA402A	Blockchain Architecture				
MCA402B	Neural Network				
MCA402C	Internet of Things				
MCA402D	Distributed Database Systems				
	ELECTIVE –V (Any One)	30	70	100	3
MCA403A	Mobile Computing				
MCA403B	Computer Graphics and Animation				
MCA403C	Natural Language Processing				
MCA403D	Machine Learning Techniques				
MCA403E	Quantum Computing				
MCA404P	Major Project	50	150	200	10
	Total	140	360	500	19

Syllabus

MCA 1st Year Ist Semester

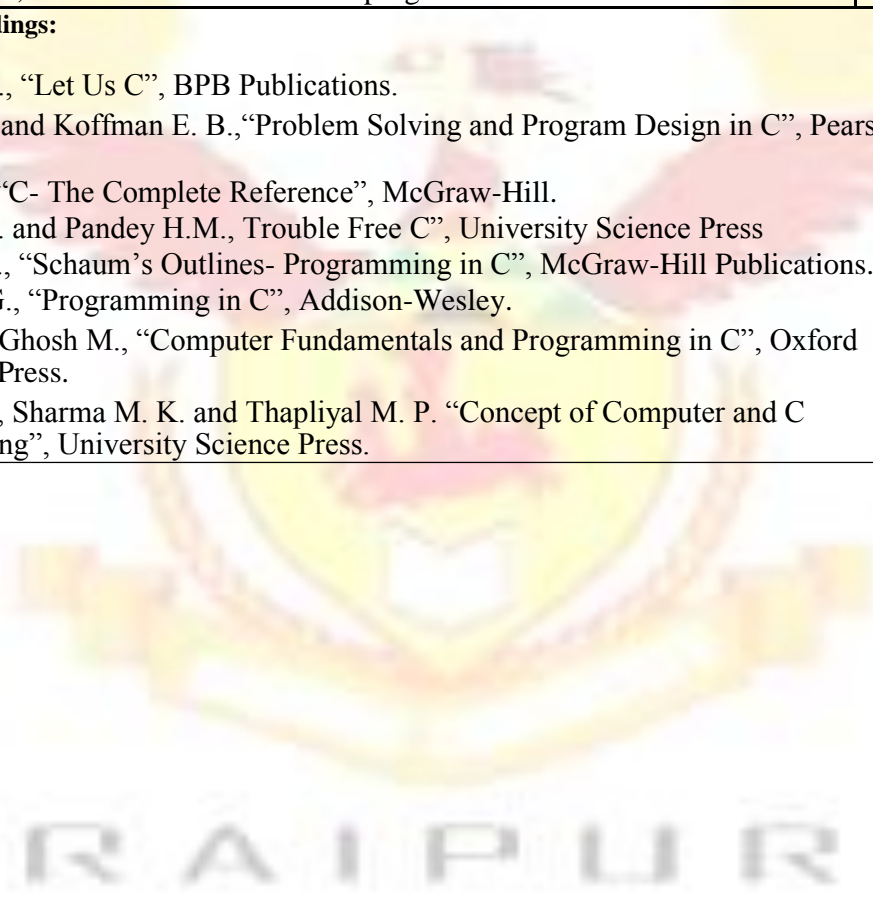

**MCA (MASTER OF COMPUTER APPLICATION)
FIRST YEAR SYLLABUS SEMESTER-I**

MCA101: FUNDAMENTAL OF COMPUTERS & EMERGING TECHNOLOGIES		
Course Outcome (CO)	Bloom's Knowledge Level (KL)	
At the end of course , the student will be able to		
CO 1	Demonstrate the knowledge of the basic structure, components, features and generations of computers.	K ₁ , K ₂
CO 2	Describe the concept of computer languages, language translators and construct algorithms to solve problems using programming concepts.	K ₂ , K ₃
CO 3	Compare and contrast features, functioning & types of operating system and computer networks.	K ₄
CO 4	Demonstrate architecture, functioning & services of the Internet and basics of multimedia.	K ₂
CO 5	Illustrate the emerging trends and technologies in the field of Information Technology.	K ₁ , K ₂
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Introduction to Computer: Definition, Computer Hardware & Computer Software Components: Hardware – Introduction, Input devices, Output devices, Central Processing Unit, Memory- Primary and Secondary. Software - Introduction, Types – System and Application. Computer Languages: Introduction, Concept of Compiler, Interpreter & Assembler Problem solving concept: Algorithms – Introduction, Definition, Characteristics, Limitations, Conditions in pseudo-code, Loops in pseudo code.	08
II	Operating system: Definition, Functions, Types, Classification, Elements of command based and GUI based operating system. Computer Network: Overview, Types (LAN, WAN and MAN), Data communication, topologies.	08
III	Internet : Overview, Architecture, Functioning, Basic services like WWW, FTP, Telnet, Gopher etc., Search engines, E-mail, Web Browsers. Internet of Things (IoT): Definition, Sensors, their types and features, Smart Cities, Industrial Internet of Things.	08
IV	Block chain: Introduction, overview, features, limitations and application areas fundamentals of Block Chain. Crypto currencies: Introduction , Applications and use cases Cloud Computing: It nature and benefits, AWS, Google, Microsoft & IBM Services	08
V	Emerging Technologies: Introduction, overview, features, limitations and application areas of Augmented Reality , Virtual Reality, Grid computing, Green computing, Big data analytics, Quantum Computing and Brain Computer Interface	08
Suggested Readings: 1. Rajaraman V., “Fundamentals of Computers”, Prentice-Hall of India. 2. Norton P., “Introduction to Computers”, McGraw Hill Education. 3. Goel A., “Computer Fundamentals”, Pearson. 4. Balagurusamy E., “ Fundamentals of Computers”, McGraw Hill 5. Thareja R., “Fundamentals of Computers”, Oxford University Press. 6. Bindra J., “The Tech Whisperer- on Digital Transformation and the Technologies that Enable it ”, Penguin		

MCA102 :PROBLEM SOLVING USING C		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO 1	Describe the functional components and fundamental concepts of a digital computer system including number systems.	K ₁ , K ₂
CO 2	Construct flowchart and write algorithms for solving basic problems.	K ₂ , K ₃
CO 3	Write 'C' programs that incorporate use of variables, operators and expressions along with data types.	K ₂ , K ₃
CO 4	Write simple programs using the basic elements like control statements, functions, arrays and strings.	K ₂ , K ₃
CO 5	Write advanced programs using the concepts of pointers, structures, unions and enumerated data types.	K ₂ , K ₃
CO 6	Apply pre-processor directives and basic file handling and graphics operations in advanced programming.	K ₂ , K ₃
DETAILED SYLLABUS		3-1-0
Unit	Topic	Proposed Lecture
I	<p>Basics of programming: Approaches to problem solving, Use of high level programming language for systematic development of programs, Concept of algorithm and flowchart, Concept and role of structured programming.</p> <p>Basics of C: History of C, Salient features of C, Structure of C Program, Compiling C Program, Link and Run C Program, Character set, Tokens, Keywords, Identifiers, Constants, Variables, Instructions, Data types, Standard Input/Output, Operators and expressions.</p>	08
II	<p>Conditional Program Execution: if, if-else, and nested if-else statements, Switch statements, Restrictions on switch values, Use of break and default with switch, Comparison of switch and if-else.</p> <p>Loops and Iteration: for, while and do-while loops, Multiple loop variables, Nested loops, Assignment operators, break and continue statement.</p> <p>Functions: Introduction, Types, Declaration of a Function, Function calls, Defining functions, Function Prototypes, Passing arguments to a function Return values and their types, Writing multifunction program, Calling function by value, Recursive functions.</p>	08
III	<p>Arrays: Array notation and representation, Declaring one-dimensional array, Initializing arrays, Accessing array elements, Manipulating array elements, Arrays of unknown or varying size, Two-dimensional arrays, Multidimensional arrays.</p> <p>Pointers: Introduction, Characteristics, * and & operators, Pointer type declaration and assignment, Pointer arithmetic, Call by reference, Passing pointers to functions, arrayof pointers, Pointers to functions, Pointer to pointer, Array of pointers.</p> <p>Strings: Introduction, Initializing strings, Accessing string elements, Array of strings, Passing strings to functions, String functions.</p>	08

IV	<p>Structure: Introduction, Initializing, defining and declaring structure, Accessing members, Operations on individual members, Operations on structures, Structure within structure, Array of structure, Pointers to structure.</p> <p>Union: Introduction, Declaring union, Usage of unions, Operations on union. Enumerated data types</p> <p>Storage classes: Introduction, Types- automatic, register, static and external.</p>	08
V	<p>Dynamic Memory Allocation: Introduction, Library functions – malloc, calloc, realloc and free.</p> <p>File Handling: Basics, File types, File operations, File pointer, File opening modes, File handling functions, File handling through command line argument, Record I/O in files.</p> <p>Graphics: Introduction, Constant, Data types and global variables used in graphics, Library functions used in drawing, Drawing and filling images, GUI interaction within the program.</p>	08
<p>Suggested Readings:</p> <ol style="list-style-type: none"> 1. Kanetkar Y., “Let Us C”, BPB Publications. 2. Hanly J. R. and Koffman E. B., “Problem Solving and Program Design in C”, Pearson Education. 3. Schildt H., “C- The Complete Reference”, McGraw-Hill. 4. Goyal K. K. and Pandey H.M., Trouble Free C”, University Science Press 5. Gottfried B., “Schaum’s Outlines- Programming in C”, McGraw-Hill Publications. 6. Kochan S.G., “Programming in C”, Addison-Wesley. 7. Dey P. and Ghosh M., “Computer Fundamentals and Programming in C”, Oxford University Press. 8. Goyal K. K., Sharma M. K. and Thapliyal M. P. “Concept of Computer and C Programming”, University Science Press. 		

MCA-103 Principles and Practices of Management		
	Course Outcome (CO)	Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO 1	Describe primary features, processes and principles of management.	K ₂ , K ₃
CO 2	Explain functions of management in terms of planning, decision making and organizing.	K ₂ , K ₄
CO 3	Illustrate key factors of leadership skill in directing and controlling business resources and processes.	K ₅ , K ₆
DETAILED SYLLABUS		
Unit	Topic	Proposed Lecture
I	Management: Concept, Nature, Importance; Management: Art and Science, Management As a Profession, Management Vs. Administration, Management Skills, Levels of Management, Characteristics of Quality Managers. Evolution of Management: Early contributions, Taylor and Scientific Management, Fayol's Administrative Management, Bureaucracy, Hawthorne Experiments and Human Relations, Social System Approach, Decision Theory Approach. Business Ethics and Social Responsibility: Concept, Shift to Ethics, Tools of Ethics	10
II	Introduction to Functions of Management, Planning: Nature, Scope, Objectives and Significance of Planning, Types of Planning, Process of Planning, Barriers to Effective Planning, Planning Premises and Forecasting, Key to Planning, Decision Making. Organizing: Concept, Organization Theories, Forms of Organizational Structure, Combining Jobs: Departmentation, Span of Control, Delegation of Authority, Authority & Responsibility, Organizational Design.	10
III	Staffing: Concept, System Approach, Manpower Planning, Job Design, Recruitment & Selection, Training & Development, Performance Appraisal, Directing: Concept, Direction and Supervision, Motivation: Concept, Motivation and Performance, Theories Of Motivation, Approaches for Improving Motivation, Pay and Job Performance, Quality of Work Life, Morale Building.	10
IV	Leadership: The Core of Leadership: Influence, Functions of Leaders, Leadership Style, Leadership Development. Communication: Communication Process, Importance of Communication, Communication Channels, Barriers to Communication. Controlling: Concept, Types of Control, Methods: Pre-control: Concurrent Control: Post-control, An Integrated Control System, The Quality Concept Factors affecting Quality, Developing a Quality Control System, Total Quality Control, Pre-control of Inputs, Concurrent Control of Operations. Post Control of Outputs. Change and Development: Model for Managing Change, Forces for Change, Need for Change, Alternative Change Techniques, New Trends in Organisational Change.	10
Text books:		
1. Stoner, Freeman and Gilbert Jr., "Management", PHI, 6th Ed.		
2. Koontz , "Principles of Management", Tata Mc Graw Hill, 1st Ed., 2008.		
3. Robbins and Coulter, "Management", PHI, 8th Ed.		
Reference Books:		
1. Robbins S. P. and Decenzo David, "A. - Fundamentals of Management: Essential Concepts and Applications", Pearson Education, 5th Ed.		
2. Hillier Frederick S. and Hillier Mark S. - Introduction to Management Science: A Modeling and Case Studies Approach with Spreadsheets, Tata Mc Graw Hill, 2nd Ed.,2008.		
3. Weihrich Heinz and Koontz Harold, "Management: A Global and Entrepreneurial Perspective", Mc Graw Hill, 12th Ed., 2008.		
4. R. Satya Raju and A. Parthasarathy, "Management Text and Classes", PHI, 2nd Ed., 2009.		

MCA104 : Discrete Mathematics		
Course Outcome (CO)	Bloom's Knowledge Level (KL)	
At the end of course , the student will be able to		
CO 1	Use mathematical and logical notation to define and formally reason about basic discrete structures such as Sets, Relations and Functions	K ₁ , K ₂
CO 2	Apply mathematical arguments using logical connectives and quantifiers to check the validity of an argument through truth tables and propositional and predicate logic	K ₂ , K ₃
CO 3	Identify and prove properties of Algebraic Structures like Groups, Rings and Fields	K ₃ , K ₄
CO 4	Formulate and solve recurrences and recursive functions	K ₃ , K ₄
CO 5	Apply the concept of combinatorics to solve basic problems in discrete mathematics	K ₁ , K ₃
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Set Theory: Introduction, Size of sets and Cardinals, Venn diagrams, Combination of sets, Multisets, Ordered pairs and Set Identities. Relation: Definition, Operations on relations, Composite relations, Properties of relations, Equality of relations, Partial order relation. Functions: Definition, Classification of functions, Operations on functions, Recursively defined functions.	08
II	Posets, Hasse Diagram and Lattices: Introduction, Partial ordered sets, Combination of Partial ordered sets, Hasse diagram, Introduction of lattices, Properties of lattices – Bounded, Complemented, Modular and Complete lattice. Boolean Algebra: Introduction, Axioms and Theorems of Boolean algebra, Boolean functions. Simplification of Boolean functions, Karnaugh maps, Logic gates.	08
III	Propositional: Propositions, Truth tables, Tautology, Contradiction, Algebra of Propositions, Theory of Inference and Natural Detection. Predicate Logic: Theory of Predicates, First order predicate, Predicate formulas, Quantifiers, Inference theory of predicate logic.	08
IV	Algebraic Structures: Introduction to algebraic Structures and properties. Types of algebraic structures: Semi group, Monoid, Group, Abelian group and Properties of group. Subgroup, Cyclic group, Cosets, Permutation groups, Homomorphism and Isomorphism of groups. Rings and Fields: Definition and elementary properties of Rings and Fields.	08
V	Natural Numbers: Introduction, Piano's axioms, Mathematical Induction, Strong Induction and Induction with Nonzero Base cases. Recurrence Relation & Generating functions: Introduction and properties of Generating Functions. Simple Recurrence relation with constant coefficients and Linear recurrence relation without constant coefficients. Methods of solving recurrences. Combinatorics: Introduction, Counting techniques and Pigeonhole principle, Polya's Counting theorem.	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Kenneth H. Rosen, "Discrete Mathematics and Its Applications", McGraw Hill, 2006. 2. B. Kolman, R.C Busby and S.C Ross, "Discrete Mathematics Structures", Prentice Hall ,2004. 3. R.P Girimaldi, "Discrete and Combinatorial Mathematics", Addison Wesley, 2004. 4. Y.N. Singh, "Discrete Mathematical Structures", Wiley- India, First edition, 2010. 5. Swapankumar Sarkar, "A Textbook of Discrete Mathematics", S. Chand & Company PVT. LTD.V. 6. Krishnamurthy, "Combinatorics Theory & Application", East-West Press Pvt. Ltd., New Delhi. 7. Liptschutz, Seymour, "Discrete Mathematics", McGraw Hill. 8. J.P. Trembely&R.Manohar, "Discrete Mathematical Structure with application to Computer Science", McGraw Hill. 		

MCA105 : COMPUTER ORGANIZATION & ARCHITECTURE		
Course Outcome (CO)	Bloom's Knowledge Level (KL)	
At the end of course , the student will be able to		
CO 1	Describe functional units of digital system and explain how arithmetic and logical operations are performed by computers	K ₂ , K ₃
CO 2	Describe the operations of control unit and write sequence of instructions for carrying out simple operation using various addressing modes.	K ₂ , K ₄
CO 3	Design various types of memory and its organization.	K ₃
CO 4	Describe the various modes in which IO devices communicate with CPU and memory.	K ₂ , K ₃
CO 5	List the criteria for classification of parallel computer and describe various architectural schemes.	K ₁ , K ₂
DETAILED SYLLABUS		3-1-0
Unit	Topic	Proposed Lecture
I	Introduction: Functional units of digital system and their interconnections, buses, bus architecture, types of buses and bus arbitration. Register, bus and memory transfer. Processor organization: general registers organization, stack organization and addressing modes.	08
II	Arithmetic and logic unit: Look ahead carries adders. Multiplication: Signed operand multiplication, Booths algorithm and array multiplier. Division and logic operations. Floating point arithmetic operation, Arithmetic & logic unit design. IEEE Standard for Floating Point Numbers.	08
III	Control Unit: Instruction types, formats, instruction cycles and sub cycles (fetch and execute etc), micro operations, execution of a complete instruction. Program Control, Reduced Instruction Set Computer, Pipelining. Hardwire and micro programmed control: micro-program sequencing, concept of horizontal and vertical microprogramming.	08
IV	Memory: Basic concept and hierarchy, semiconductor RAM memories, 2D & 2 1/2D memory organization. ROM memories. Cache memories: concept and design issues & performance, address mapping and replacement Auxiliary memories: magnetic disk, magnetic tape and optical disks Virtual memory: concept implementation.	08
V	Input / Output: Peripheral devices, I/O interface, I/O ports, Interrupts: interrupt hardware, types of interrupts and exceptions. Modes of Data Transfer: Programmed I/O, interrupt initiated I/O and Direct Memory Access., I/O channels and processors. Serial Communication: Synchronous & asynchronous communication, standard communication interfaces.	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. John P. Hayes, "Computer Architecture and Organization", McGraw Hill. 2. William Stallings, "Computer Organization and Architecture-Designing for Performance", Pearson Education. 3. M. Morris Mano, "Computer System Architecture", PHI. 4. Carl Hamacher, Zvonko Vranesic, Safwat Zaky, "Computer Organization", McGraw-Hill. 5. Behrooz Parahami, "Computer Architecture", Oxford University Press. 6. David A. Patterson and John L. Hennessy, "Computer Architecture-A Quantitative Approach", Elsevier Pub. 7. Tannenbaum, "Structured Computer Organization", PHI. 		

MCA106P: PROBLEM SOLVING USING C LAB

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO1	Write, compile, debug and execute programs in a C programming environment.	K ₃
CO2	Write programs that incorporate use of variables, operators and expressions along with data types.	K ₃
CO3	Write programs for solving problems involving use of decision control structures and loops.	K ₃
CO4	Write programs that involve the use of arrays, structures and user defined functions.	K ₃
CO5	Write programs using graphics and file handling operations.	K ₃
<ol style="list-style-type: none"> 1. Program to implement conditional statements in C language. 2. Program to implement switch-case statement in C language 3. Program to implement looping constructs in C language. 4. Program to perform basic input-output operations in C language. 5. Program to implement user defined functions in C language. 6. Program to implement recursive functions in C language. 7. Program to implement one-dimensional arrays in C language. 8. Program to implement two-dimensional arrays in C language. 9. Program to perform various operations on two-dimensional arrays in C language. 10. Program to implement multi-dimensional arrays in C language. 11. Program to implement string manipulation functions in C language. 12. Program to implement structure in C language. 13. Program to implement union in C language. 14. Program to perform file handling operations in C language. 15. Program to perform graphical operations in C language. <p>Note: The Instructor may add/delete/modify experiments, wherever he/she feels in a justified manner.</p>		

MCA107P: COMPUTER ORGANIZATION & ARCHITECTURE LAB

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO1	Design and verify combinational circuits (adder, code converter, decoder, multiplexer) using basic gates.	K ₆
CO2	Design and verify various flip-flops.	K ₃
CO3	Design I/O system and ALU.	K ₃
CO4	Demonstrate combinational circuit using simulator	K ₂
<ol style="list-style-type: none">1. Implementing HALF ADDER, FULL ADDER using basic logic gates.2. Implementing Binary -to -Gray, Gray -to -Binary code conversions.3. Implementing 3-8 line DECODER. Implementing 4x1 and 8x1 MULTIPLEXERS.4. Verify the excitation tables of various FLIP-FLOPS.5. Design of an 8-bit Input/ Output system with four 8-bit Internal Registers.6. Design of an 8-bit ARITHMETIC LOGIC UNIT.7. Design the data path of a computer from its register transfer language description.8. Design the control unit of a computer using either hardwiring or microprogramming based on its register transfer language description.9. Implement a simple instruction set computer with a control unit and a data path.		
Note: The Instructor may add/delete/modify/tune experiments, wherever he/she feels in a justified manner.		

R A I P U R

Android Programming Lab

(MCA108P)

Course Objective:

The ANDROID Application Development Lab needed to implement rich Android applications for the Android mobile platform. Student will build the code, compile, execute, and debug mobile applications using the Java for Android programming language and Eclipse to develop programs using advanced programming concepts.

Course Outcomes:

1. Demonstrate the android features and create, develop using android
2. Demonstrate and Understanding anatomy of an Android application
3. Apply the android geo location based services
4. Illustrate the android wifi features and advance android development
5. Demonstrate the linux security and implement ADL interface

Practical List:

1. Introduction to mobile technologies and devices
2. Android platform and applications overview
3. Setting Android development environments
4. Writing Android applications
5. Understanding anatomy of an Android application
6. Managing application resources
7. Essentials of Android user interface design
8. User interface design elements, events, and dialogs
9. User interface design layouts
10. Working with texts and shapes
11. Working with animations
12. Using Android location based APIs
13. Using Android storage APIs
14. Using Android web APIs

RAIPUR

MCA 1st Year

IInd Semester

**MCA (MASTER OF COMPUTER APPLICATION)
FIRST YEAR SYLLABUS SEMESTER-II**

MCA201: THEORY OF AUTOMATA & FORMAL LANGUAGES		
Course Outcome (CO)	Bloom's Knowledge Level (KL)	
At the end of course , the student will be able to		
CO 1	Define various types of automata for different classes of formal languages and explain their working.	K ₁ , K ₂
CO 2	State and prove key properties of formal languages and automata.	K ₁ , K ₃
CO 3	Construct appropriate formal notations (such as grammars, acceptors, transducers and regular expressions) for given formal languages.	K ₃ , K ₄
CO 4	Convert among equivalent notations for formal languages.	K ₃
CO 5	Explain the significance of the Universal Turing machine, Church-Turing thesis and concept of Undecidability.	K ₂
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Basic Concepts and Automata Theory: Introduction to Theory of Computation- Automata, Computability and Complexity, Alphabet, Symbol, String, Formal Languages, Deterministic Finite Automaton (DFA)- Definition, Representation, Acceptability of a String and Language, Non Deterministic Finite Automaton (NFA), Equivalence of DFA and NFA, NFA with ϵ -Transition, Equivalence of NFA's with and without ϵ -Transition, Finite Automata with output- Moore machine, Mealy Machine, Equivalence of Moore and Mealy Machine, Minimization of Finite Automata, Myhill-Nerode Theorem, Simulation of DFA and NFA.	08
II	Regular Expressions and Languages: Regular Expressions, Transition Graph, Kleene's Theorem, Finite Automata and Regular Expression- Arden's theorem, Algebraic Method Using Arden's Theorem, Regular and Non-Regular Languages- Closure properties of Regular Languages, Pigeonhole Principle, Pumping Lemma, Application of Pumping Lemma, Decidability- Decision properties, Finite Automata and Regular Languages, Regular Languages and Computers, Simulation of Transition Graph and Regular language.	08
III	Regular and Non-Regular Grammars: Context Free Grammar (CFG)-Definition, Derivations, Languages, Derivation Trees and Ambiguity, Regular Grammars-Right Linear and Left Linear grammars, Conversion of FA into CFG and Regular grammar into FA, Simplification of CFG, Normal Forms- Chomsky Normal Form (CNF), Greibach Normal Form (GNF), Chomsky Hierarchy, Programming problems based on the properties of CFGs.	08
IV	Push Down Automata and Properties of Context Free Languages: Nondeterministic Pushdown Automata (NPDA)- Definition, Moves, A Language Accepted by NPDA, Deterministic Pushdown Automata (DPDA) and Deterministic Context free Languages (DCFL),	08

	Pushdown Automata for Context Free Languages, Context Free grammars for Pushdown Automata, Two stack Pushdown Automata, Pumping Lemma for CFL, Closure properties of CFL, Decision Problems of CFL, Programming problems based on the properties of CFLs.	
V	Turing Machines and Recursive Function Theory : Basic Turing Machine Model, Representation of Turing Machines, Language Acceptability of Turing Machines, Techniques for Turing Machine Construction, Modifications of Turing Machine, Turing Machine as Computer of Integer Functions, Universal Turing machine, Linear Bounded Automata, Church's Thesis, Recursive and Recursively Enumerable language, Halting Problem, Post Correspondence Problem, Introduction to Recursive Function Theory.	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. J.E. Hopcraft, R. Motwani, and Ullman, "Introduction to Automata theory, Languages and Computation", Pearson EducationAsia,2nd Edition. 2. J. Martin, "Introduction to languages and the theory of computation", McGraw Hill, 3rd Edition. 3. C. Papadimitrou and C. L. Lewis, "Elements and Theory of Computation", PHI. 4. K.L.P. Mishra and N. Chandrasekaran , "Theory of Computer Science Automata Languages and Computation" , PHI. 5. Y.N. Singh, "Mathematical Foundation of Computer Science", New Age International. 		

MCA202 : OBJECT ORIENTED PROGRAMMING		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO 1	List the significance and key features of object oriented programming and modeling using UML	K ₄
CO 2	Construct basic structural, behavioral and architectural models using object oriented software engineering approach.	K ₆
CO 3	Integrate object oriented modeling techniques for analysis and design of a system.	K _{4, 5}
CO 4	Use the basic features of data abstraction and encapsulation in C++ programs.	K ₄
CO 5	Use the advanced features such as Inheritance, polymorphism and virtual function in C++ programs.	K _{3, 4}
DETAILED SYLLABUS		3-1-0
Unit	Topic	Proposed Lecture
I	Introduction: Object Oriented Programming: objects, classes, Abstraction, Encapsulation, Inheritance, Polymorphism, OOP in Java, Characteristics of Java, The Java Environment, Java Source File Structure, and Compilation. Fundamental Programming Structures in Java: Defining classes in Java, constructors, methods, access specifiers, static members, Comments, Data Types, Variables, Operators, Control Flow, Arrays.	08
II	Inheritance, Interfaces, and Packages: Inheritance: Super classes, sub classes, Protected members, constructors in sub classes, Object class, abstract classes and methods. Interfaces: defining an interface, implementing interface, differences between classes and interfaces and extending interfaces, Object cloning, inner classes. Packages: Defining Package, CLASSPATH Setting for Packages, Making JAR Files for Library Packages, Import and Static Import Naming Convention For Packages, Networking java.net package.	08
III	Exception Handling, I/O: Exceptions: exception hierarchy, throwing and catching exceptions, built-in exceptions, creating own exceptions, Stack Trace Elements. Input / Output Basics: Byte streams and Character streams, Reading and Writing, Console Reading and Writing Files.	08
IV	Multithreading and Generic Programming: Differences between multi-threading and multitasking, thread life cycle, creating threads, synchronizing threads, Inter-thread communication, daemon threads, thread groups. Generic Programming: Generic classes, generic methods, Bounded Types: Restrictions and Limitations.	08
V	Event Driven Programming: Graphics programming: Frame, Components, working with 2D shapes, Using colors, fonts, and images. Basics of event handling: event handlers, adapter classes, actions, mouse events, AWT event hierarchy. Introduction to Swing: layout management, Swing Components: Text Fields, Text Areas, Buttons, Check Boxes, Radio Buttons, Lists, choices, Scrollbars, Windows Menus and Dialog Boxes.	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Herbert Schildt, "Java The complete referencel", McGraw Hill Education, 8th Edition, 2011. 2. Cay S. Horstmann, Gary Cornell, "Core Java Volume –I Fundamentals", Prentice Hall, 9th Edition, 2013. 3. Steven Holzner, "Java Black Book", Dreamtech. 4. Balagurusamy E, " Programming in Java", McGraw Hill 5. Naughton, Schildt, "The Complete reference java2", McGraw Hill 6. Khalid Mughal, "A Programmer's Guide to Java SE 8 Oracle Certified Associate (OCA)", Addison-Wesley. 		

MCA203 : OPERATING SYSTEMS		
Course Outcome (CO)	Bloom's Knowledge Level (KL)	
At the end of course , the student will be able to		
CO 1	Explain main components, services, types and structure of Operating Systems.	K ₂
CO 2	Apply the various algorithms and techniques to handle the various concurrency control issues.	K ₃
CO 3	Compare and apply various CPU scheduling algorithms for process execution.	K ₂
CO 4	Identify occurrence of deadlock and describe ways to handle it.	K ₃
CO 5	Explain and apply various memory, I/O and disk management techniques.	K ₅
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Introduction: Operating System Structure- Layered structure, System Components, Operating system functions, Classification of Operating systems- Batch, Interactive, Time sharing, Real Time System, Multiprocessor Systems, Multiuser Systems, Multi process Systems, Multithreaded Systems, Operating System services, Reentrant Kernels, Monolithic and Microkernel Systems.	08
II	Concurrent Processes: Process Concept, Principle of Concurrency, Producer / Consumer Problem, Mutual Exclusion, Critical Section Problem, Dekker's solution, Peterson's solution, Semaphores, Test and Set operation, Classical Problem in Concurrency- Dining Philosopher Problem, Sleeping Barber Problem, Inter Process Communication models and Schemes, Process generation.	08
III	CPU Scheduling: Scheduling Concepts, Performance Criteria, Process States, Process Transition Diagram, Schedulers, Process Control Block (PCB), Process address space, Process identification information, Threads and their management, Scheduling Algorithms, Multiprocessor Scheduling. Deadlock: System model, Deadlock characterization, Prevention, Avoidance and detection, Recovery from deadlock.	08
IV	Memory Management: Basic bare machine, Resident monitor, Multiprogramming with fixed partitions, Multiprogramming with variable partitions, Protection schemes, Paging, Segmentation, Paged segmentation, Virtual memory concepts, Demand paging, Performance of demand paging, Page replacement algorithms, Thrashing, Cache memory organization, Locality of reference.	08
V	I/O Management and Disk Scheduling: I/O devices, and I/O subsystems, I/O buffering, Disk storage and disk scheduling, RAID. File System: File concept, File organization and access mechanism, File directories, and File sharing, File system implementation issues, File system protection and security.	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Silberschatz, Galvin and Gagne, "Operating Systems Concepts", Wiley Publication. 2. Sibsankar Halder and Alex A Arvind, "Operating Systems", Pearson Education. 3. Harvey M Dietel, "An Introduction to Operating System", Pearson Education. 4. William Stallings, "Operating Systems: Internals and Design Principles", 6th Edition, Pearson Education. 5. Harris, Schaum's Outline Of Operating Systems, McGraw Hill 		

MCA204 : DATABASE MANAGEMENT SYSTEMS

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO 1	Describe the features of a database system and its application and compare various types of data models.	K ₂
CO 2	Construct an ER Model for a given problem and transform it into a relation database schema.	K ₅ , K ₆
CO 3	Formulate solution to a query problem using SQL Commands, relational algebra, tuple calculus and domain calculus.	K ₅ , K ₆
CO 4	Explain the need of normalization and normalize a given relation to the desired normal form.	K ₂ , K ₃
CO 5	Explain different approaches of transaction processing and concurrency control.	K ₂
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Introduction: Overview, Database System vs File System, Database System Concept and Architecture, Data Model Schema and Instances, Data Independence and Database Language and Interfaces, Data Definitions Language, DML, Overall Database Structure. Data Modeling Using the Entity Relationship Model: ER Model Concepts, Notation for ER Diagram, Mapping Constraints, Keys, Concepts of Super Key, Candidate Key, Primary Key, Generalization, Aggregation, Reduction of an ER Diagrams to Tables, Extended ER Model, Relationship of Higher Degree.	08
II	Relational data Model and Language: Relational Data Model Concepts, Integrity Constraints, Entity Integrity, Referential Integrity, Keys Constraints, Domain Constraints, Relational Algebra, Relational Calculus, Tuple and Domain Calculus. Introduction to SQL: Characteristics of SQL, Advantage of SQL. SQL Data Type and Literals. Types of SQL Commands. SQL Operators and their Procedure. Tables, Views and Indexes. Queries and Sub Queries. Aggregate Functions. Insert, Update and Delete Operations, Joins, Unions, Intersection, Minus, Cursors, Triggers, Procedures in SQL/PL SQL	08
III	Data Base Design & Normalization: Functional dependencies, normal forms, first, second, third normal forms, BCNF, inclusion dependence, loss less join decompositions, normalization using FD, MVD, and JDs, alternative approaches to database design	08
IV	Transaction Processing Concept: Transaction System, Testing of Serializability, Serializability of Schedules, Conflict & View Serializable Schedule, Recoverability, Recovery from Transaction Failures, Log Based Recovery, Checkpoints, Deadlock Handling. Distributed Database: Distributed Data Storage, Concurrency Control, Directory System	08
V	Concurrency Control Techniques: Concurrency Control, Locking Techniques for Concurrency Control, Time Stamping Protocols for Concurrency Control, Validation Based Protocol, Multiple Granularity, Multi Version Schemes, Recovery with Concurrent Transaction, Case Study of Oracle.	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Korth, Silbertz, Sudarshan," Database Concepts", McGraw Hill. 2. Date C J, "An Introduction to Database Systems", Addison Wesley. 3. Elmasri, Navathe, "Fundamentals of Database Systems", Addison Wesley. 4. O'Neil, "Databases", Elsevier Pub. 5. Ramakrishnan, "Database Management Systems", McGraw Hill. 6. Leon & Leon,"Database Management Systems", Vikas Publishing House. 7. Bipin C. Desai, " An Introduction to Database Systems", Gagotia Publications. 8. Majumdar& Bhattacharya, "Database Management System", McGraw Hill. 		

MCA205: DATA STRUCTURES & ANALYSIS OF ALGORITHMS		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO 1	Explain the concept of data structure, abstract data types, algorithms, analysis of algorithms and basic data organization schemes such as arrays and linked lists.	K ₂
CO 2	Describe the applications of stacks and queues and implement various operations on them using arrays and linked lists.	K ₃
CO 3	Describe the properties of graphs and trees and implement various operations such as searching and traversal on them.	K ₃
CO 4	Compare incremental and divide-and-conquer approaches of designing algorithms for problems such as sorting and searching.	K ₄
CO 5	Apply and analyze various design approaches such as Divide-and-Conquer, greedy and dynamic for problem solving .	K ₄
DETAILED SYLLABUS		4-0-0
Unit	Topic	Proposed Lecture
I	<p>Introduction to data structure: Data, Entity, Information, Difference between Data and Information, Data type , Build in data type, Abstract data type, Definition of data structures, Types of Data Structures: Linear and Non-Linear Data Structure, Introduction to Algorithms: Definition of Algorithms, Difference between algorithm and programs, properties of algorithm, Algorithm Design Techniques, Performance Analysis of Algorithms, Complexity of various code structures, Order of Growth, Asymptotic Notations.</p> <p>Arrays: Definition, Single and Multidimensional Arrays, Representation of Arrays: Row Major Order, and Column Major Order, Derivation of Index Formulae for 1-D,2-D Array Application of arrays, Sparse Matrices and their representations.</p> <p>Linked lists: Array Implementation and Pointer Implementation of Singly Linked Lists, Doubly Linked List, Circularly Linked List, Operations on a Linked List. Insertion, Deletion, Traversal, Polynomial Representation and Addition Subtraction & Multiplications of Single variable.</p>	08
II	<p>Stacks: Abstract Data Type, Primitive Stack operations: Push & Pop, Array and Linked Implementation of Stack in C, Application of stack: Prefix and Postfix Expressions, Evaluation of postfix expression, Iteration and Recursion- Principles of recursion, Tail recursion, Removal of recursion Problem solving using iteration and recursion with examples such as binary search, Fibonacci numbers, and Hanoi towers.</p> <p>Queues: Operations on Queue: Create, Add, Delete, Full and Empty, Circular queues, Array and linked implementation of queues in C, Dequeue and Priority Queue.</p> <p>Searching: Concept of Searching, Sequential search, Index Sequential Search, Binary Search. Concept of Hashing & Collision resolution Techniques used in Hashing.</p>	08

III	<p>Sorting: Insertion Sort, Selection Sort, Bubble Sort, Heap Sort, Comparison of Sorting Algorithms, Sorting in Linear Time: Counting Sort and Bucket Sort.</p> <p>Graphs: Terminology used with Graph, Data Structure for Graph Representations: Adjacency Matrices, Adjacency List, Adjacency. Graph Traversal: Depth First Search and Breadth First Search, Connected Component.</p>	08
IV	<p>Trees: Basic terminology used with Tree, Binary Trees, Binary Tree Representation: Array Representation and Pointer (Linked List) Representation, Binary Search Tree, Complete Binary Tree, A Extended Binary Trees, Tree Traversal algorithms: Inorder, Preorder and Postorder, Constructing Binary Tree from given Tree Traversal, Operation of Insertion, Deletion, Searching & Modification of data in Binary Search Tree. Threaded Binary trees, Huffman coding using Binary Tree, AVL Tree and B Tree.</p>	08
V	<p>Divide and Conquer with Examples Such as Merge Sort, Quick Sort, Matrix Multiplication: Strassen's Algorithm</p> <p>Dynamic Programming: Dijkstra Algorithm, Bellman Ford Algorithm, All-pair Shortest Path: Warshal Algorithm, Longest Common Sub-sequence</p> <p>Greedy Programming: Prims and Kruskal algorithm.</p>	08

Suggested Readings:

1. Cormen T. H., Leiserson C. E., Rivest R. L., and Stein C., "Introduction to Algorithms", PHI.
2. Horowitz Ellis, Sahni Sartaj and Rajasekharan S., "Fundamentals of Computer Algorithms", 2nd Edition, Universities Press.
3. Dave P. H., H.B.Dave, "Design and Analysis of Algorithms", 2nd Edition, Pearson Education.
4. Lipschuts S., "Theory and Problems of Data Structures", Schaum's Series.
5. Goyal K. K., Sharma Sandeep & Gupta Atul, "Data Structures and Analysis of Algorithms", HP Hamilton.
6. Lipschutz, Data Structures With C - SIE - SOS, McGraw Hill
7. Samanta D., "Classic Data Structures", 2nd Edition Prentice Hall India.
8. Goodrich M. T. and Tomassia R., "Algorithm Design: Foundations, Analysis and Internet examples", John Wiley and sons.
9. Sridhar S., "Design and Analysis of Algorithms", Oxford Univ. Press.
10. Aho, Ullman and Hopcroft, "Design and Analysis of algorithms", Pearson Education.
11. R. Neapolitan and K. Naimipour, "Foundations of Algorithms", 4th edition, Jones an Bartlett Student edition.
12. Reema Thareja, Data Structures using C, Oxford Univ. Press

R A I P U R

MCA206P : OBJECT ORIENTED PROGRAMMING LAB

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO1	Use the Concept of Data Abstraction and Encapsulation in C++ programs.	K ₃
CO2	Design and Develop C++ program using the concept such as polymorphism, virtual function, exception handling and template.	K ₃
CO3	Apply object oriented techniques to analyze, design and develop a complete solution for a given problem.	K ₃
<ol style="list-style-type: none">1. Use Java compiler and eclipse platform to write and execute java program.2. Creating simple java programs,3. Understand OOP concepts and basics of Java programming.4. Create Java programs using inheritance and polymorphism.5. Implement error-handling techniques using exception handling and multithreading.6. Understand the use of java packages.7. File handling and establishment of database connection.8. Develop a calculator application in java.9. Develop a Client Server Application.10. Develop GUI applications using Swing components.		

MCA207P : DATABASE MANAGEMENT SYSTEMS LAB

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO1	Use the Concept of Data Abstraction and Encapsulation in C++ programs.	K ₆
CO2	Write SQL commands to query a database.	K ₃
CO3	Write PL/SQL programs for implementing stored procedures, stored functions, cursors, trigger and packages.	K ₆
<ol style="list-style-type: none">1. Installing oracle/ MYSQL.2. Creating Entity-Relationship Diagram using case tools.3. Writing SQL statements Using ORACLE /MYSQL: a. Writing basic SQL SELECT statements. b.Restricting and sorting data. c. Displaying data from multiple tables. d.Aggregating data using group function. e. Manipulating data. f. Creating and managing tables.4. Normalization.5. Creating cursor.6. Creating procedure and functions.7. Creating packages and triggers.8. Design and implementation of payroll processing system.9. Design and implementation of Library Information System.10. Design and implementation of Student Information System.11. Automatic Backup of Files and Recovery of Files.		

R A I P U R

MCA208P:DATA STRUCTURES & ANALYSIS OF ALGORITHMS LAB		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO1	Write and execute programs to implement various searching and sorting algorithms.	K ₃
CO2	Write and execute programs to implement various operations on two-dimensional arrays.	K ₃
CO3	Implement various operations of Stacks and Queues using both arrays and linked lists data structures.	K ₃
CO4	Implement graph algorithm to solve the problem of minimum spanning tree	K ₃
<p>Program in C or C++ for following:</p> <ol style="list-style-type: none"> 1. To implement addition and multiplication of two 2D arrays. 2. To transpose a 2D array. 3. To implement stack using array 4. To implement queue using array. 5. To implement circular queue using array. 6. To implement stack using linked list. 7. To implement queue using linked list. 8. To implement BFS using linked list. 9. To implement DFS using linked list. 10. To implement Linear Search. 11. To implement Binary Search. 12. To implement Bubble Sorting. 13. To implement Selection Sorting. 14. To implement Insertion Sorting. 15. To implement Merge Sorting. 16. To implement Heap Sorting. 17. To implement Matrix Multiplication by strassen's algorithm 18. Find Minimum Spanning Tree using Kruskal's Algorithm 		

Computer Network (MCA301)

Course Objectives:

1. To make student know, the network architecture comprising of hardware & software technologies, also to provide the basic Knowledge of data Communication.
2. To make students know, the insight working of network in terms of layered architecture, which includes a set of protocol and its implementation.
3. To make students know, the practical aspect of working of Ethernet in terms of IEEE standards.
4. To make students know, the general principles of network in terms of routing algorithm and Internet architecture and addressing.
5. To make students know, the security aspects in network and implementing it through various methodologies.

Course Outcome:

1. The students will be able to understand the structure and organization of computer networks; including the division into layers, role of each layer, and relationships between the layers.
2. The students will have basic understanding of Communication techniques and functioning of physical layer.
3. The students will be able to understand the basic concepts of data link layer properties; including the flow control mechanisms.
4. The students will be able to understand the basic concepts of application layer protocol design i.e.
5. The students will be able to understand the basic concepts of network security concepts; including authentication, integrity and system security design challenges.

UNIT-I Introduction:

Layered Network Architecture, ISO- OSI Model, Introduction to TCP/IP Model.; Data Communication Techniques: Pulse Code Modulation (PCM), Differential Pulse Code Modulation (DPCM), Delta Modulation (DM).; Multiplexing Techniques: Frequency Division, Time Division, Statistical Time Division Multiplexing; Transmission Media: Wires, Cables, Radio Links, Satellite Link, Fiber Optic.

UNIT-II Data Link Layer Protocols:

Noise Free Channels Protocol: Stop and Wait Protocols, Sliding Window Protocol, Noisy Channels Protocols: Stop and Wait ARQ, Sliding Window ARQ: Go Back and Selective Repeat ARQs, ISDN, Asynchronous Transfer Mode (ATM), ATM cells, Header and Cell Formats, Error Detection And Correction: Single and Burst Error, Parity Check Codes, Cyclic Redundancy Code & Hamming Code.

UNIT-III Medium Access Control Sub Layer:

Concept of Random Access, Pure ALOHA, Throughput characteristics of ALOHA, Throughputs for finite and infinite populations, S-ALOHA, LAN: IEEE 802.3, 802.4 and 802.5 Protocols, Performance of Ethernet, Token Ring Protocol, FDDI Protocol, Distributed Queue Dual Bus (DQDB) Protocol.

UNIT-IV Network and Transport Layer Protocols:

General Principles, Virtual Circuits and Data-grams, Windows Flow Control, Packet Discarding, Traffic Shaping, Choke RSVP, Network Devices: Bridges, Routers and Gateways, Routing Algorithms: Optimality principle, Shortest Path Routing- Dijkstra, Distance Vector Routing, Link State Routing, Flow Based Routing, Multicasting Routing, Flooding and

Broadcasting, Flow and Congestion Control, Internet Architecture and Addressing, Transport Layer: Design Issues, Quality of Services, Primitives, Connection Management: Addressing, Connection Establishment and Releases, Flow Control and Buffering, Crash Recovery, Protocols: Transmission Control Protocol (TCP), User Datagram Protocol (UDP).

UNIT-V Application Layer Protocols and Other Networks:

Cryptography: Substitution and Transposition, Ciphers, Data Encryption Standard (DES), DES Chaining, Breaking DES, Public key Cryptography, Authentication Protocols, Virtual LAN (VLAN), Virtual Private Network (VPN).

Text Books:

1. A.S. Tanenbaum " Computer Network: Second Ed. Prentice Hall, India(tan)
2. B.A. Frouzan, Data Communication , Tata McGraw Hill.

Reference Books:

1. D. Berekas and R. Gallager, " Data Networks", second Ed. Prentice Hall, India
2. D.E. Coner, " Intertworking with TCP/IP", Vol-I. Prentice Hall India.
3. G.E. Keiser, " Local Area Networks", McGraw Hill, International Ed.
4. W. Stalling, "Data & Computer Communications", Maxwell Macmillan International Ed.

Artificial Intelligence (MCA302)

Course Objectives:

1. To make students learn to define problem of complex nature , state space of problem domain and searching techniques to solve them.
2. To make students understand concept of heuristic and how it is applied to solve AI based problem along with mechanism to represent knowledge structures and inference procedure.
3. To make student learn processing of natural language and challenges associated with it.
4. To make students understand basics of Machine learning
5. To make students understand concept of Expert System, its design issues and applications

Course Outcome:

1. Student will have ability to understand and define different AI problem and apply suitable problem solving technique.
2. Student will have ability to define the heuristics and apply them for solving complex problem with understanding of different heuristic based search techniques.
3. Student will develop an understanding of game playing techniques
4. Student will have understanding of different knowledge structure and inference mechanism with ability to apply them in intelligent solutions of complex problem.

UNIT-I General overview of AI & Search techniques:

Introduction to AI, Problem Solving: State space representation, characteristic of problem; Control Strategies Production systems, Blind searches: Depth first, Breadth first search. Informed Search: Hill climbing; Branch and Bound technique; Best first search, Constraint Satisfaction problems.

UNIT-II Heuristic Search techniques & Knowledge Representation:

A* algorithm; Problem reduction AND-OR graph and AO* algorithm; Game Playing: Minimax search procedure; Alpha-Beta cutoffs; **Knowledge representation:** First Order Predicate Calculus; Skolemisation; Resolution Principle and Unification Algorithm; Semantic Networks; Frame Systems ; Scripts; Conceptual Dependency.

UNIT-III Natural Language Processing, Planning and Uncertainty:

Phases of NLP; Recursive Transition Nets (RTN); Augmented Transition Nets (ATN); Planning Overview – An Example Domain: The Blocks World; Component of Planning Systems; Goal Stack Planning (linear planning); Non-linear Planning using constraint posting; Probabilistic Reasoning and Uncertainty; Probability theory; Bayes Theorem and Bayesian network.

UNIT-IV Machine learning Paradigms:

Components of learning system; supervised and unsupervised learning; Reinforcement learning; Inductive learning: Decision trees deductive learning: Probability based reasoning, Clusteringk means fuzzy C means; hierarchal clustering, Introduction of Artificial Neural network.

UNIT-V Expert system and application:

Introduction to Expert Systems, Architecture of Expert Systems; characteristic of expert system, Rule based expert system: forward chaining, applications of expert system, Expert

System Shells; Knowledge Acquisition; tools for knowledge acquisition Case Studies: MYCIN,

Text Book:

1. Elaine Rich and Kevin Knight: Artificial Intelligence- Tata McGraw Hill.
2. Saroj Kaushik: "Artificial Intelligence", Cenage Learning
3. Dan W. Patterson, Introduction to Artificial Intelligence and Expert Systems- Prentice Hall of India.
4. B. Yegnanarayana:"Artificial Neural Networks", Prentice Hall of India.

Reference Books:

1. Nils J. Nilsson: Principles of Artificial Intelligence- Narosa Publishing house.
2. Artificial Intelligence : A Modern Approach, Stuart Rusell, Peter Norvig, Pearson Education,2nd Edition
3. Artificial Intelligence, Winston, Patrick, Henry, Pearson Education.
4. Siman Haykin,"Neural Netowrks"Prentice Hall of India
- 5 John Yen,rezaLangari:"Fuzzy Logic" Pearson Education.

Software Engineering and Testing (MCA303)

Course Objectives

- To discuss the software engineering discipline, its evolution, impact and emergence of software engineering and explain the development and use of different software life cycle models for real-life industrial applications.
- To discuss different aspects of software project management, risk management and configuration management and explain various requirement elicitation, analysis and specification techniques.
- To discuss various software design methodologies, the impact of cohesion and coupling measures on the goodness of the software design.
- To discuss the importance of practicing different coding standards, guidelines and different testing strategies along with software reliability metrics and software quality management techniques & standards.

Course Outcomes

After reading this subject, students will be able to:

1. Choose a proper life cycle model for different real-life industrial projects, prepare the SRS document, design the software using function-oriented approach (DFDs) and object-oriented approach (UML diagrams), code it, and test the developed software using different software testing strategies.
2. Understand the concepts of computer aided software engineering (CASE) and use different CASE tools in the development, maintenance and reuse of software systems.

Unit - I

Software development life cycle and Project Management: Software development life cycle (SDLC) models, software project management, project planning, project estimation, Halstead's Software Science, project scheduling, staffing, Organization and team structure, risk management, configuration management.

Unit - II

Requirements analysis and specification: Requirements gathering and analysis, software requirements specification, formal systems specification, axiomatic specification, algebraic specification.

Unit - III

Software Design: Outcome of a design process, cohesion and coupling, layered arrangement of modules, approaches to software design, function-oriented software design: overview of SA/SD methodology, structured analysis, DFDs, structured design, detailed design, design review, object-oriented software design: UML diagrams, use case modelling, unified process, OOD goodness criteria, user interface design, types of user interfaces, component-based GUI development.

Unit - IV

Coding and Testing: Coding standards and guidelines, code review, software documentation, unit testing, black-box testing, white-box testing, debugging, integration testing, system testing.

Unit - V

Software reliability and Quality management: Software reliability, Statistical testing, software quality, ISO 9000, SEI CMM, PSP, Six sigma, CASE Tools, Software maintenance, Software reuse.

Reference Books:

1. R. S. Pressman, Software Engineering: A Practitioner's Approach, McGraw Hill Publications , 2006
2. R. Mall, Fundamentals of Software Engineering, PHI Learning , 2014
3. I.Sommerville, Software Engineering, Pearson Education , 2006
4. A.Behferooz and F. J. Hudson, Software Engineering Fundamentals, Oxford University Press, 2000

Cryptography and Network Security (MCA304A)

Course Objectives:

1. To make student know, the essentials of computer security, also to provide the basic knowledge of security issues.
2. To make students know, different cryptography techniques namely public and private key cryptography.
3. To make students understand, network security protocol including firewall.
4. The students will be able to know advanced attacking techniques.

Course Outcome:

1. The students will be able to understand cyber security fundamentals.
2. The students will have basic understanding of cryptography techniques and function.
3. The students will have in depth understanding of network security algorithms including Firewall.
4. The students will be able to know various advanced attacking techniques.
5. The students will be able to know various cyber security policies.

UNIT- I FOUNDATION OF CRYPTOGRAPHY AND SECURITY: -The OSI Security Architecture, A model for network Security, Symmetric cipher model Substitution techniques Mathematical Tools for Cryptography: Modular Arithmetic, Euclid's Algorithm. Design Principle of Block ciphers: Theory of Block Cipher Design, Feistel ciphers, DES and Triple DES, Strength Of DES, Modes of Operation (ECB, CBC, OFB, CFB).

UNIT- II PUBLIC KEY CRYPTOGRAPHY: - Prime Numbers and Testing for Primality, Principles of public key Cryptosystems RSA, Key Management Diffie- Hellman, key exchange, Hashes and Message Digests: Message Authentication codes, MD5, SHA-1, HMAC.

UNIT- III DIGITAL SIGNATURES, CERTIFICATES, AND STANDARDS: - Digital Signature Standard (DSS and DSA), Authentication: Kerberos V4, Electronic Mail Security: Pretty Good Privacy (PGP), **System Security:** Computer Virus, Firewall and Design Principles, Electronic Commerce Security: Secure Electronic Transaction (SET).

UNIT- IV CYBER SECURITY FUNDAMENTALS & ATTACKING TECHNIQUES: Security Concepts: Cyber Crimes and Criminals: Definition of cyber-crime, types of cyber-crimes and types of cyber-criminals. Antiforensics: Use of proxies, use of tunneling techniques. Fraud techniques: Phishing and malicious mobile code, Rogue antivirus, Click fraud. Threat Infrastructure: Botnets, Fast Flux and advanced fast flux.

UNIT-V CYBER SECURITY POLICY CATALOG: Cyber Governance Issues, Internet Names and Numbers, Copyrights and Trademarks, Email and Messaging, Cyber User Issues, Cyber Crime, Geo location, Privacy, Cyber Conflict Issues, Intellectual Property Theft, Cyber Espionage.

Text Books:

- (1) Cryptography and Network Security, William Stalling, PHI.
- (2) Atul Kahate, "Cryptography and Network Security", Tata McGraw Hill, 2003.
- (3) Cyber Security Essentials, James Graham, Richard, Ryan CRC press, 2011.

Reference Books:

- (1) Cyber Security policy Guidebook, Jennifer, Jason, Paul, Marcus, Jeffery, Joseph. Wiley Publication, 2012.
- (2) Robertra Bragg “Network Security: The Complete Reference”, Tata McGraw Hill.

Data Warehousing & Data Mining (MCA304B)

Course Objectives:

- To understand data warehouse concepts, architecture, business analysis and tools
- To understand data pre-processing and data visualization techniques
- To study algorithms for finding hidden and interesting patterns in data
- To understand and apply various classification and clustering techniques using tools.

Course Outcomes:

- Upon completion of the course, the students should be able to:
- Design a Data warehouse system and perform business analysis with OLAP tools.
- Apply suitable pre-processing and visualization techniques for data analysis
- Apply frequent pattern and association rule mining techniques for data analysis
- Apply appropriate classification and clustering techniques for data analysis

Unit - I DATA WAREHOUSING, BUSINESS ANALYSIS AND ON-LINE ANALYTICAL PROCESSING (OLAP)

Basic Concepts – Data Warehousing Components – Building a Data Warehouse – Database Architectures for Parallel Processing – Parallel DBMS Vendors – Multidimensional Data Model – Data Warehouse Schemas for Decision Support, Concept Hierarchies -Characteristics of OLAP Systems – Typical OLAP Operations, OLAP and OLTP.

Unit - II DATA MINING – INTRODUCTION

Introduction to Data Mining Systems – Knowledge Discovery Process – Data Mining Techniques – Issues – applications- Data Objects and attribute types, Statistical description of data, Data Preprocessing – Cleaning, Integration, Reduction, Transformation and discretization, Data Visualization, Data similarity and dissimilarity measures.

Unit - III DATA MINING – FREQUENT PATTERN ANALYSIS

Mining Frequent Patterns, Associations and Correlations – Mining Methods- Pattern Evaluation Method – Pattern Mining in Multilevel, Multi Dimensional Space – Constraint Based Frequent Pattern Mining, Classification using Frequent Patterns

Unit - IV CLASSIFICATION AND CLUSTERING

Decision Tree Induction – Bayesian Classification – Rule Based Classification – Classification by Back Propagation – Support Vector Machines — Lazy Learners – Model Evaluation and Selection-Techniques to improve Classification Accuracy. Clustering Techniques – Cluster analysis-Partitioning Methods – Hierarchical Methods – Density Based Methods – Grid Based Methods – Evaluation of clustering – Clustering high dimensional data- Clustering with constraints, Outlier analysis-outlier detection methods.

Unit - V WEKA TOOL

Datasets – Introduction, Iris plants database, Breast cancer database, Auto imports database – Introduction to WEKA, The Explorer – Getting started, Exploring the explorer, Learning algorithms, Clustering algorithms, Association–rule learners.

References Books:

2. K.P. Soman, ShyamDiwakar and V. Ajay, —Insight into Data Mining Theory and Practice, Eastern Economy Edition, Prentice Hall of India, 2006.
3. Ian H.Witten and Eibe Frank, —Data Mining: Practical Machine Learning Tools and Techniques, Elsevier, Second Edition.

4. Jiawei Han and Micheline Kamber, —Data Mining Concepts and Techniques, Third Edition, Elsevier, 2012.

Software Project Management (MCA304C)

Course Objective:

- Understand the concepts of Software Engineering and Project Management.
- Familiarize Project Management framework and Tools.
- Apply knowledge of Project Life Cycle to implement the projects.
- Apply the requirement specification and designing tools along with UML.
- Understand the techniques of project scheduling & project implementation.
- Learn software cost estimation and software quality assurance techniques.

Course Outcome:

- Define the key concepts of Software Project Management.
- Demonstrate understanding of the requirements Analysis and Application of UML Models.
- Make use of estimation logic for estimation of software size as well as cost of software.
- Examine the need of change management during software development as well as application of quality tools.
- Assess various factors influencing project management, quality assurance and risk assessment.
- Develop process for successful quality project delivery.

Unit - I

An Overview of Software Project Management: Introduction to Project, Project Management, Difference between Software Engineering & Software Project Management. An Overview of IT Project Management: Define project, project management framework, The role of project Manager, Systems View of Project Management, Stakeholder management, Leadership in Projects: Modern Approaches to Leadership & Leadership Styles.

Unit - II

Software Process Models: Project phases and the project life cycle, Waterfall Model, Evolutionary Process Model: Prototype and Spiral Model, Incremental Process model: Iterative approach, RAD model, Agile Development Model: Extreme programming, Scrum. Software Requirement Analysis and Design: Types of Requirement, Feasibility Study, Requirement Elicitation Techniques: Interviews, Questionnaire, Brainstorming, Facilitated Application Specification Technique (FAST), Requirement Analysis and Design: Data Flow Diagram (DFD), Data Dictionary, Software Requirement Specification (SRS).

Unit - III

Object Oriented Analysis and Design: UML Overview, The Nature and purpose of Models, UML diagrams(Use Case diagram, Activity Diagram, Class & Object Diagram, Sequence Diagram, State Transition Diagram, Deployment Diagram).

Software Project Planning & Software Cost Estimation: Business Case, Project selection and Approval, Project charter, Project Scopemanagement, Creating the Work Breakdown Structures (WBS). Software Estimation: Size Estimation: Function Point (Numericals). Cost Estimation: COCOMO (Numericals), COCOMO-II (Numericals) till Early design model.

Unit - IV

Project Scheduling and Procurement Management: Relationship between people and Effort: Staffing Level Estimation, Effect of schedule

Change on Cost, Project Schedule, Schedule Control, Critical Path Method (CPM) (Numericals), Basics of Procurement Management, Change Management.

Software and System Quality Management: Overview of ISO 9001, SEI Capability Maturity Model, McCalls Quality Model, Six Sigma, Formal Technical Reviews, Tools and Techniques for Quality Control, Pareto Analysis, Statistical Sampling, Quality Control Charts and the seven Run Rule.

Unit - V

Software Risk Management: Identify IT Project Risk, Risk Analysis and Assessment, Risk Strategies, Risk Monitoring and Control, Risk Response and Evaluation.

The Project Implementation Plan and Closure: The Project Implementation Plan and Closure : Project Implementation Administrative Closure.

Reference Books:

1. Software Engineering, 5th and 7th edition, by Roger S Pressman, McGraw Hill publication.
2. Managing Information Technology Project, 6edition, by Kathy Schwalbe, Cengage Learning publication.
3. Information Technology Project Management by Jack T Marchewka Wiley India publication.
4. Software Engineering 3rd edition by KK Agrawal, Yogesh Singh, New Age International publication.
5. The Unified Modelling Language Reference manual, Second Edition, James Rumbaugh, Iver Jacobson, Grady Booch, Addison- Wesley.+
6. Object-Oriented Modeling and Design with UML, Michael Blaha, James Rumbaugh, PHI(2005).

Cloud Computing (MCA304D)

COURSE OBJECTIVES

- To understand Cloud Computing concepts, technologies, architecture and applications
- To understand the underlying principle of cloud virtualization, cloud storage, data management and data visualization
- To understand different cloud programming platforms and tools to develop and deploy applications on cloud

COURSE OUTCOMES

Upon successful completion of this course students should be able to:

1. Develop and deploy cloud application using popular cloud platforms
2. Design and develop highly scalable cloud-based applications by creating and configuring virtual machines on the cloud and building private cloud.
3. Make recommendations on cloud computing solutions for an enterprise.

Unit - I

Introduction - Overview of Computing Paradigms: Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing Cloud Computing (NIST Model) Properties and Characteristics of Cloud. Cloud Computing Architecture - Cloud computing stack Service Models (XaaS): Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Software as a Service(SaaS) Deployment Models: Public cloud, Private cloud, Hybrid cloud. Data Center Architecture.

Unit - II

Cloud Resource Virtualization - Introduction to virtualization Different approaches to virtualization Hypervisors Machine Image Virtual Machine(VM) Process VM vs System VM Resource Virtualization: Server, Storage, Network Full Virtualization vs Para Virtualization Operating System Support for Virtualization Virtual Machine(resource) Provisioning and Manageability VM Placement, VM Migration.

Unit - III

Service Management in Cloud Computing - Service Level Agreements(SLAs) Billing & Accounting Economics of scaling Managing Data: Database & Data Stores in Cloud, Large Scale Data Processing.

Unit - IV

Task Scheduling in Cloud - Scheduling Algorithms for Computing Clouds Fair Queuing Start Time Fair Queuing Borrowed Virtual Time Cloud Scheduling Subject to Deadlines Scheduling MapReduce Applications Subject to Deadlines.

Unit - V

Cloud Security - Cloud Security Risks, Trust, Operating System Security, VM Security, Security of Virtualization, Security Risks Posted by Shared Images, Security Risks Posted by Management OS, Data privacy and security Issues, Identity & Access Management, Access Control, Authentication in cloud computing, Case Study - Microsoft Azure, Amazon EC2

Reference Books:

2. Rajkumar Buyya, James Broberg, Andrzej M. Goscinski, Cloud Computing: Principles and Paradigms, Wiley
3. Barrie Sosinsky, Cloud Computing Bible, Wiley
4. Jim Smith, Ravi Nair, Virtual Machines: Versatile Platforms for Systems and Processes, MK Elsevier

Compiler Design (MCA304E)

Course objectives:

1. To introduce various phases of compiler design.
2. To introduce the major concept areas of language translation and compiler design
3. To develop an awareness of the function and complexity of modern compilers.
4. To introduce code optimization techniques.

Course Outcome:

1. Students will have a concrete view on the theoretical and practical aspects of compiler design
2. Students will be able to apply ideas and techniques discussed to various software design
3. Students will be able to understand the complexity of compiler.
4. Students will be able to understand the working of runtime environment.

UNIT- I Introduction:

Introduction to Compiler, single and multi-pass compilers, Translators, Phases of Compilers, Compiler writing tools, Bootstrapping, Finite Automata and Lexical Analysis: Role of Lexical Analyzer, Specification of tokens, Recognition of tokens, Regular expression, Finite automata, from regular expression to finite automata, transition diagrams, Implementation of lexical analyzer, Tool for lexical analyzer–LEX, Error reporting.

UNIT- II Syntax Analysis and Parsing Techniques:

Context free grammars, Bottom-up parsing and top down parsing, Top down Parsing: elimination of left recursion, recursive descent parsing, Predictive Parsing; Bottom Up Parsing: Operator precedence parsing, LR parsers, Construction of SLR, canonical LR and LALR parsing tables, Construction of SLR parse tables for ambiguous grammar.

UNIT- III Syntax Directed Translation & Intermediate code generation:

Synthesized and inherited attributes, dependency graph, Construction of syntax trees, bottom up and top down evaluation of attributes, S-attributed and L-attributed definitions. Postfix notation; Three address code, quadruples, triples and indirect triples, Translation of assignment statements, control flow, Boolean expressions.

UNIT- IV Runtime Environment:

Storage organization, activation tree, activation record, allocation strategies: stack and heap, symbol table management, dynamic storage allocation: implicit and explicit.

UNIT- V Code Optimization & Code Generation:

Basic blocks and flow graphs, Optimization of basic blocks, Loop optimization, Loop invariant computations. Issues in the design of Code generator, simple Code generator.

Text Books:

1. Compilers-Principles, Techniques and Tools by Alfred V.Aho, Ravi Sethi and J.D. Ullman, AddisonWesley.
2. Principles of Compiler Design, Alfred V. Aho and J.D. Ullman, Narosa Publication.

Reference Books:

1. Compiler design in C by A.C. Holub, Prentice Hall of India.
2. Compiler construction (Theory and Practice) by A. Barret William and M. Bates (Galgotia Publication).
3. Compiler Design, Kakde, Compiler Design, Galgotia Publication.

Web Technology (MCA305A)

Course Objective:

- Create simple websites based on Node.js features
- Demonstrate database connectivity and operations
- Make applications making use of Angular.js concepts
- Construct Angular.js Forms and Single Page Applications

Course Outcome:

- Build simple websites making use of various Node.js features.
- Design a dynamic web application enabled with database connectivity
- Use the fundamentals of Angular.js Filters, Directives and Controllers to build applications
- Develop Forms and Single page applications (SPA)

Unit - I

Introduction to Node.js: What is Node.js, Advantages of Node.js, Node.js Process Model, Traditional Web Server Model, and Setup Development Environment: Installation of Node.js on Windows, Working in REPL, Node JS Console? Modules, Events & Functions: Standard Callback Pattern, Event Emitter Pattern, Event Types, Event Emitter API, Creating an Event Emitter, Defer Execution of a Function, Cancel Execution of a Function, Schedule/Cancel repetitive execution of a Function, Block/Escape Event Loop.

Unit - II

File Handling & HTTP Web Server: File Paths, fs Module, Opening a file, Reading from a file, writing to a file, closing a file. HTTP request/response object, Headers, Piping, Shutting down the server. Databases: Connect and Communicate with a MySQL Database, Adding data to the database, Reading data.

Unit - III

Angular JS Basics: Introduction to AngularJS, MVC Architecture, Conceptual Overview: Setting up the Environment, First Application, Understanding ng attributes, Expressions: Number and String Expressions, Object Binding and Expressions, Working with Arrays. Filters, Directives : Built-In Filters, Uppercase and Lowercase Filters, Currency and Number Formatting Filters, OrderBy Filter, Introduction to Directives, Directive Lifecycle, Conditional Directives, Styles Directives, Mouse and Keyboard.

Unit - IV

Controllers : Understanding Controllers, Programming Controllers & \$scope object, Adding Behavior to a Scope Object, Passing Parameters to the Methods, Having Array as members in Controller Scope.

Unit - V

Forms and SPA (Single Page Application): Working with Simple Angular Forms, Working with Select and Options, Input Validations, Using CSS classes, Form Events, Custom Model update triggers, Custom Validation. Introduction to SPA, Creating HTML Template, Configuring Route Provider, Creating Single Page Application.

Reference Books:

Big Data Analytics (MCA305B)

Course Objectives:

1. To explore the fundamental concepts of big data analytics and visualization techniques.
2. To learn to use various techniques for mining data stream.
3. To understand big data analytics technology Hadoop concepts.
4. To understand the Hadoop Framework and various big data enabling Technologies.
5. To understand Open Source Database Concepts.

Course Outcomes:

1. The students will be able to understand the Big Data Analytics fundamental concepts and visualization techniques.
2. The students will be able to understand various techniques used for mining data stream.
3. The students will be able to understand Hadoop Concepts.
4. The students will be able to Know Hadoop frameworks and big data enabling Technologies.
5. The students will be able to understand about concepts of Open Source database such as NOSQL, HBase etc.

UNIT-I INTRODUCTION TO BIG DATA: Introduction to Big Data ,Characteristics of Big Data(5 V's Of Big Data),Sources of Big Data, Challenges of Conventional Systems, Analysisvs Analytics, Types of Data Analytics, Analysis vs Reporting ,Visualizations - Visual data analysis techniques. Case studies of application Big Data.

UNIT- II MINING DATA STREAMS: Introduction To Streams Concepts, Stream Data Model and Architecture ,Sampling Data in a Stream, Filtering Streams, Counting Distinct Elements in a Stream, Estimating Moments ,Counting Oneness in a Window, Decaying Window.

UNIT-III HADOOP: Components of Hadoop, The Hadoop Distributed File System, Map Reduce, YARN, COMMON, Hadoop Cluster, How Map Reduce Works, Anatomy of a Map Reduce, Job Scheduling, Shuffle and Sort Map Reduce Types and Formats, Map Reduce Features

UNIT-IV HADOOP FRAMEWORKS - Applications on Big Data Using Pig, Hive, Zookeeper Maintenance of Hadoop Cluster, Hadoop benchmarks. Hadoop frameworks. (Cassandra, Apache Mahout, Tez, Hbase, Avro, Chukwa, Spark, Ambari.)

UNIT-V NOSQL: Limitations of SQL Databases, Introduction to NoSQL databases, types of NoSQL Databases, Document Databases, Key Valued Databases, Column based Databases and Graph Databases. Issues of availability and consistency, CAP Theorem, Case studies of MongoDB,Neo4j,HBase,Cassandra, Memcached and Redis.

Text Books:

1. Michael Berthold, David J. Hand, "Intelligent Data Analysis", Springer, 2007.
2. Tom White " Hadoop: The Definitive Guide" Third Edition, O'reilly Media, 2012.
3. Anand Rajaraman and Jeffrey David Ullman, "Mining of Massive Datasets", Cambridge University Press, 2012.

Simulation & Modeling (MCA305C)

Course Objective:

- Simulate and model computer applications
- Understanding various models in simulations
- Working with strategies to simulate

Course Outcome:

- Students completing this course will be able to:
- Developing simulation system to simulate real life scenarios
- Exploring scenarios using 3D visualizations

Unit - I Introduction

Introduction to Simulation, Need of Simulation, Time to simulate, Inside simulation software: Modeling the progress of Time, Modeling Variability, Conceptual Modeling: Introduction to Conceptual modeling, Defining conceptual model, Requirements of the conceptual model, Communicating the conceptual model, Developing the Conceptual Model: Introduction, A framework for conceptual modeling, methods of model simplification.

Unit - II Model Verification and Validation Data Collection and Analysis

Introduction, Data requirements, Obtaining data, Representing unpredictable variability, Selecting statistical distributions. Obtaining Accurate Results: Introduction, The nature of simulation models and simulation output, Issues in obtaining accurate simulation results, example model, dealing with initialization bias: warmup and initial conditions, Selecting the number of replications and run-length. Searching the Solution Space: Introduction, The nature of simulation experimentation, Analysis of results from a single scenario, Comparing alternatives, Search experimentation, and Sensitive analysis. Verification, Validation and Confidence: Introduction, Defining Verification and Validation, The difficulties of verification and validation, Methods of verification and validation, Independent verification and validation.

Unit - III Modeling and simulation modeling

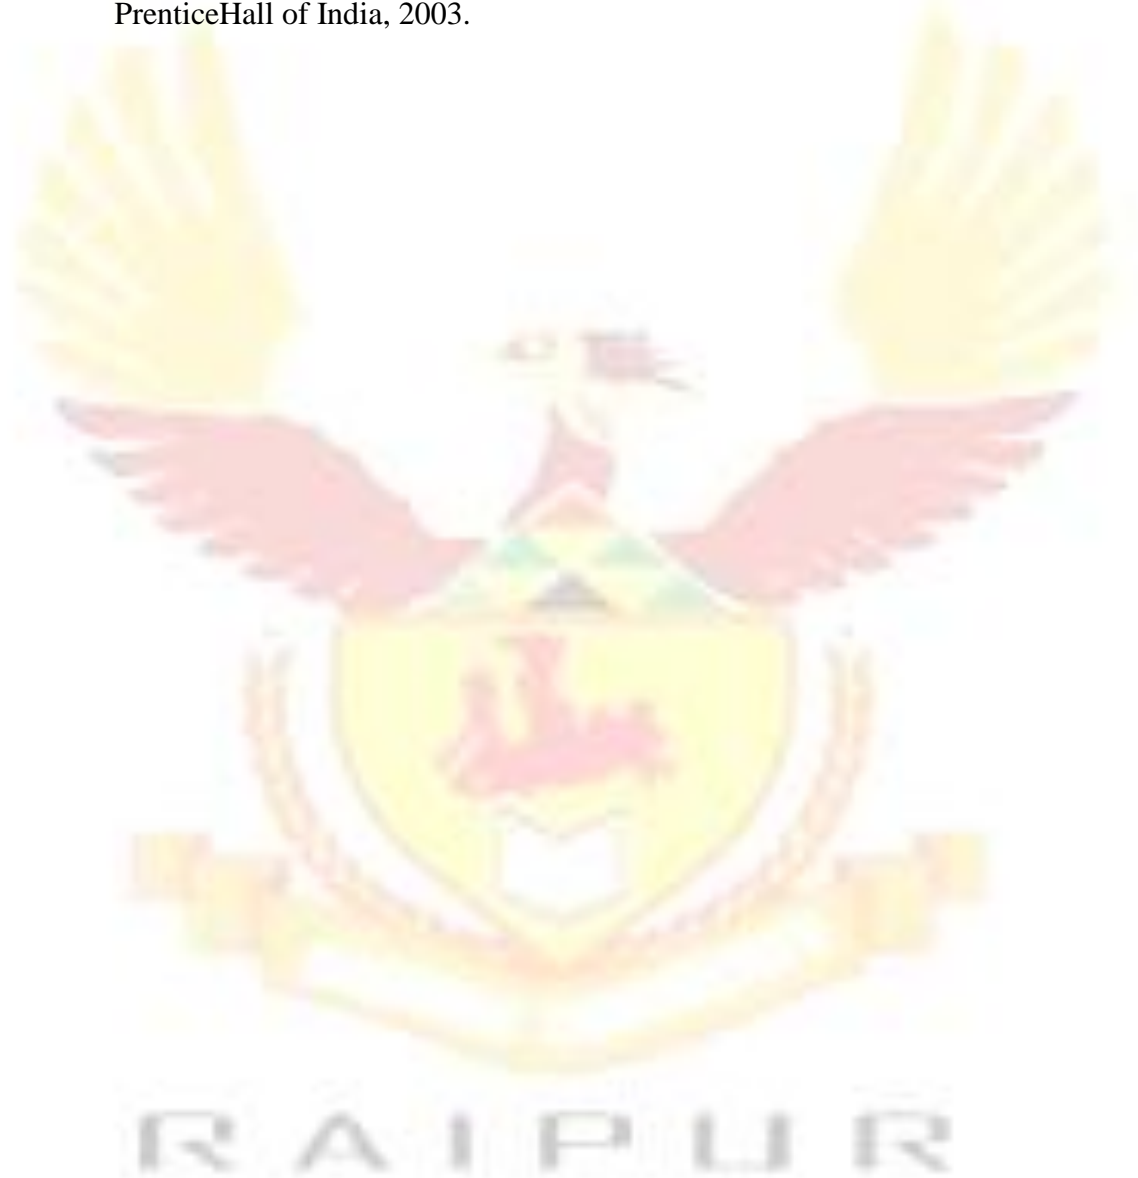

Types of models, Analytical vs Simulation modeling, Application of simulation modeling, Level of abstraction, Simulation Modeling. Methods, System Dynamics, Discrete Event Modeling, Agent Based modeling: Introduction to Agent, Agent-based modelling, Time in agent based models, Space in agent based models, Discrete space, Continuous space movement in continuous space, Communication between agents, Dynamic creation and destruction of agents, Statics on agent population, Condition triggered events and transition in agents. Building agents based models: The problem statement, Phases of modelling, Assumptions, 3 D animation. Dynamics Systems: Stock and flow diagrams, examples of stock and flow diagrams. Multi-method modelling: Architecture, Technical aspects of combining modelling methods, Examples.

Unit - IV Design and behavior of models

Designing state-based behavior: Statecharts, State transitions, Viewing and debugging Statecharts at runtime, Statecharts for dynamic objects. Discrete events and Eventmodel object: Discrete event, Event-the simplest low level model object, Dynamic events, and Exchanging data with external world. Presentation and animation: Working with shapes, groups and colors, Designing interactive models: using controls, Dynamic properties of controls, 3D Animation. Randomness in Models: Probability distributions, sources of randomness in the model, randomness in system dynamics model, random number generators, Model time, date and calendar: Virtual and real time: The model time, date and calendar, Virtual and real-time execution modes.

References Books:

1. Agent Based Modeling and Simulation, Taylor S, 2014.

Digital Image Processing (MCA305D)

Course Objectives:

1. Study the fundamental concepts of Digital Image processing and to discuss mathematical transforms.
2. Study image enhancement techniques and explore DCT and DFT techniques
3. Expose students to various image enhancement, restoration methods and morphological operations.
4. Analyze Image Data Compression and morphological Operation
5. Explain various Applications of Image Processing.

Course Outcomes:

1. Explain the fundamental concepts of a digital image processing System
2. Apply techniques for enhancing digital images
3. Examine the use of Fourier transforms for image processing in the frequency domain
4. Compare various Image compression standards and morphological Operation
5. Identify various Applications of Image Processing

Unit - I

Introduction to Image Processing Systems: Image representation, basic relationship between pixels, elements of DIP system, elements of visual perception-simple image formation model Vidicon and Digital Camera working principles Brightness, contrast, hue, saturation, mach band effect, Colour image fundamentals-RGB, CMY, HSI models 2D sampling, quantization. Image Enhancement in the Spatial domain: Spatial domain methods: point processing-intensity transformations, histogram processing, image subtraction,

Unit - II

image averaging Spatial filtering- smoothing filters, sharpening filters Frequency domain methods: low pass filtering, high pass filtering, homomorphic filter. Discrete Fourier Transform: Introduction, DFT and its properties, FFT algorithms ñ direct, divide and conquer approach, 2-D DFT & FFT Image Transforms : Introduction to Unitary Transform, DFT, Properties of 2-D DFT, FFT, IFFT, Walsh transform, Hadamard Transform, Discrete Cosine Transform, Discrete Wavelet Transform: Haar Transforms, KL Transform.

Unit - III

Image Restoration and Image Segmentation: Image degradation, Classification of Image restoration Techniques, Image restoration Model, Image Blur, Noise Model : Exponential, Uniform, Salt and Pepper, Image Restoration Techniques : Inverse Filtering, Average Filtering, Median Filtering. The detection of discontinuities - Point, Line and Edge detections: Prewitt Filter, Sobel Filter, Fri-Chen Filter Hough Transform, Thresholding Region based segmentation Chain codes, Polygon approximation, Shape numbers.

Unit - IV

Image Data Compression and morphological Operation: Need for compression, redundancy, classification of image compression schemes, Huffman coding, arithmetic coding, dictionary based compression, transform Based compression, Image compression standards- JPEG & MPEG, vector quantization, wavelet based image compression. Morphological Operation: Introduction, Dilation, Erosion, Opening, Closing.

Unit - V

Applications of Image Processing: Case Study on Digital Watermarking, Biometric Authentication (Face, Finger Print, Signature Recognition), Vehicle Number Plate Detection and Recognition, Object Detection using Correlation Principle, Person Tracking using DWT, Handwritten and Printed Character Recognition, Content Based Image Retrieval, Text Compression.

**Artificial Intelligence Lab
(MCA306P)**

1. Write a program to demonstrate Inference Concept in Prolog.
2. Write a program to implement and check Car Data Base system.
3. Write a program on External Goal.
4. Write a program on internal Goal.
5. Write a program for testing the Graph.
6. Write a program on FAIL predicate to find all Solutions.
7. Write a program on Recursion to print a set of numbers.
8. Write a program to process List with Header.
9. Write a program on Exclusion using FAIL predicate.
10. Write a program on List processing with fail predicate.
11. Write a program to implement Login mechanism without recursion.
12. Write a program to implement Login mechanism with Repeat Predicate.
13. Write a program to implement Login mechanism without repeat predicate with recursion.
14. Write a program to test whether an element is a member of list or not.
15. Write a program on CUT predicate to prevent backtracking.
16. Write a program addition of two integers using built-in predicates.
17. Write a program to find square root of a number.
18. Write a program comparison operators.
19. Write a program to implement simple Counter.

RAIPUR

Software Engineering & Testing Laboratory

(MCA307P)

Course Objective:

- To develop SRS document, design documents such as ER Diagrams, DFDs, UML Diagrams etc. for some given software project.
- To develop efficient codes for some given software projects and test the developed code using different tools.
- To implement different software project management techniques.
- To use different computer aided software engineering (CASE) tools.

Course Outcomes:

After reading this subject, students will be able to:

- Develop SRS document, design documents such as ER Diagrams, DFDs, UML Diagrams etc. for a given software project.
- Develop efficient codes for a given software project using appropriate coding standards and guidelines and test the developed code using different tools.
- Implement different software project management techniques such as FP, COCOMO, CPM, PERT etc.
- Know the use of different computer aided software engineering (CASE) tools in the development, maintenance and reuse of software systems.

Experiment List:

1. Prepare the SRS document for each of the following problems. You should identify the appropriate requirements for each problem Draw the Use Case diagrams, Domain Models, and Class Diagrams. Draw the Sequence Diagrams and Collaboration Diagrams for each Use Case, Draw the State Chart Diagrams and Activity Diagrams, wherever necessary develop the corresponding software using Java with an interactive GUI and appropriate Database. Also, formally specify the following systems using Z and Petrinet.
 - a. Develop software to automate the book keeping activities of a 5 star hotel
 - b. The local newspaper and magazine delivery agency wants to automate the various clerical activities associated with its business. Develop a software for this.
 - c. A small automobile spare parts shop sells the spare parts for vehicles of several makes and models. Each spare part is typically manufactured by several small industries. To streamline the sales and supply ordering, the shop owner wants to automate the activities associated with his business. Develop a software for this.
 - d. Develop a software for the automation of the dispensary of Kalinga University.
 - e. Develop a software for automating various activities of the Estate Office of Kalinga University.
 - f. Develop a word processing software with some limited number of facilities such as making bold italics, underline, cut, copy and paste etc.
 - g. Develop a graphics editor software package, using which one can create / modify several common types of graphics entities.
 - h. Develop a software for automating various activities of the departmental offices of Kalinga University.
2. Write a C function for searching an integer value from a large sorted sequence of integer values stored in array of size 100, using the binary search method. Build the control flow graph of this function using any compiler writing tool. Write a program in

Java to determine its cyclomatic complexity. Identify the linearly independent paths and generate the test cases using path coverage based strategy.

3. Write a program in Java to determine the number of defects still remaining after testing, using error seeding methodology.
4. Calculate Unadjusted Function Point (UFP), Complexity Adjustment Factor (CAF) and Function Point (FP) for the following problem.

Number of user inputs=32

Number of user outputs=60

Number of user inquiries=24

Number of files=8

Number of external interfaces=2

Assume all weighting factors to be average and all complexity adjustment values to be average.

Number of user inputs=24 (Weighting factor is average)

Number of user outputs=46 (Weighting factor is simple)

Number of user inquiries=8 (Weighting factor is complex)

Number of files=4 (Weighting factor is average)

Number of external interfaces=2 (Weighting factor is simple)

The various complexity adjustment values are 4, 1, 0, 3, 3, 5, 4, 4, 3, 3, 2, 2, 4, 5.

5. For a project of 100,000 LOC embedded system, compute the effort and development time using intermediate COCOMO. Assume there are programmers of the low quality but a lot of experience with the programming language with all other attribute values being nominal. Value for low quality=1.17, value for lot of experience=0.95, nominal value=1.
6. Consider a database application project with the following characteristics. The application has 6 screens with 4 views each and 9 data tables for 3 servers and 4 clients. The application may generate 5 reports of 6 sections each from 5 data tables from 2 server and 3 clients. There is 12% reuse of object points. The developers experience and capability in the similar environment is low. The maturity of organization in terms of capability is nominal. Calculate the object point count, New Object-Point count and effort to develop such a project.
7. Draw the network diagram, find out the critical path and critical activities, and calculate the project duration for the given problems using CPM.
8. Draw the network diagram, find out the critical path and critical activities, and calculate the project duration for the given problems using PERT.
9. Perform load testing on the following websites using the tool JMeter.
(a) www.google.com, (b) www.irctc.com, (c) www.nitrkl.ac.in
10. Perform mutation testing and find the mutation score of some sample applications using the tool Jumble.
11. Perform functional testing of some sample web applications using the tool Selenium.
12. Consider an office automation system. There are 4 major modules:

Data Entry 0.6 KLOC

Data Update 0.6 KLOC

Query 0.8 KLOC

Reports 1.0 KLOC

The various cost driver attributes are of high complexity, high storage, low experience and low programmer capability with all others being nominal. Use intermediate COCOMO to estimate final effort, average staff size and total development time. Value for high complexity=1.15, value for high storage=1.06, value for low experience=1.13, value for low programmer capability=1.17, nominal value=1.

**Mini Project
(MCA308P)**

(MCA401A): Privacy and Security in Online Social Media		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to:		
CO 1	Understand working of online social networks	K2
CO 2	Describe privacy policies of online social media	K2
CO 3	Analyse countermeasures to control information sharing in Online social networks.	K3
CO 4	Apply knowledge of identity management in Online social networks	K3
CO 5	Compare various privacy issues associated with popular social media.	K3
DETAILED SYLLABUS		3-1-0
Unit	Topic	Proposed Lecture
I	Introduction to Online Social Networks: Introduction to Social Networks, From offline to Online Communities, Online Social Networks, Evolution of Online Social Networks, Analysis and Properties, Security Issues in Online Social Networks, Trust Management in Online Social Networks, Controlled Information Sharing in Online Social Networks, Identity Management in Online Social Networks, data collection from social networks, challenges, opportunities, and pitfalls in online social networks, APIs; Collecting data from Online Social Media.	08
II	Trust Management in Online Social Networks: Trust and Policies, Trust and Reputation Systems, Trust in Online Social, Trust Properties, Trust Components, Social Trust and Social Capital, Trust Evaluation Models, Trust, credibility, and reputations in social systems; Online social media and Policing, Information privacy disclosure, revelation, and its effects in OSM and online social networks; Phishing in OSM & Identifying fraudulent entities in online social networks	08
III	Controlled Information Sharing in Online Social Networks: Access Control Models, Access Control in Online Social Networks, Relationship-Based Access Control, Privacy Settings in Commercial Online Social Networks, Existing Access Control Approaches	08
IV	Identity Management in Online Social Networks: Identity Management, Digital Identity, Identity Management Models: From Identity 1.0 to Identity 2.0, Identity Management in Online Social Networks, Identity as Self-Presentation, Identity thefts, Open Security Issues in Online Social Networks	08
V	Case Study: Privacy and security issues associated with various social media such as Facebook, Instagram, Twitter, LinkedIn etc.	08
Textbooks:		
<ol style="list-style-type: none"> 1. Security and Privacy-Preserving in Social Networks, Editors: Chbeir, Richard, Al Bouna, Bechara (Eds.), Springer, 2013. 2. Security and Trust in Online Social Networks, Barbara Carminati, Elena Ferrari, Marco Viviani, Morgan & Claypool publications. 3. Security and Privacy in Social Networks, Editors: Altshuler, Y., Elovici, Y., Cremers, A.B., Aharony, N., Pentland, A. (Eds.), Springer, 2013 4. Security and privacy preserving in social networks, Elie Raad & Richard Chbeir, Richard Chbeir & Bechara Al Bouna, 2013 5. Social Media Security: Leveraging Social Networking While Mitigating Risk, Michael Cross, 2013 		

(MCA401B) : Soft Computing		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Recognize the need of soft computing and study basic concepts and techniques of soft computing.	K ₁ , K ₂
CO 2	Understand the basic concepts of artificial neural network to analyze widely used neural networks.	K ₂ , K ₄
CO 3	Apply fuzzy logic to handle uncertainty in various real-world problems.	K ₃
CO 4	Study various paradigms of evolutionary computing and evaluate genetic algorithm in solving optimization problems.	K ₁ , K ₅
CO 5	Apply hybrid techniques in applications of soft computing.	K ₃
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Introduction to Soft Computing: Introduction, Comparison with hard computing, Concept of learning and adaptation, Constituents of soft computing, Applications of soft computing. Artificial Neural Networks: Basic concepts of neural networks, Human brain, Biological neural network, History of artificial neural networks, Basic building blocks of an artificial neuron, Neural network architectures, Activation functions, Characteristics and limitation of neural networks.	08
II	Artificial Neural Networks: Learning methods - Supervised, Unsupervised, Reinforcement, Hebbian, Gradient descent, Competitive, Stochastic. Major classes of neural networks: Perceptron networks, Multilayer perceptron model, Back-propagation network, Radial basis function network, Recurrent neural network, Hopfield networks, Kohonen self-organizing feature maps.	08
III	Fuzzy Logic: Introduction to Fuzzy Logic, Comparison with crisp logic, Properties of classical sets, Operations on classical sets, Properties of fuzzy sets, Operations on fuzzy sets, Classical relations, Fuzzy relations, Features and types of fuzzy membership functions, Fuzzy arithmetic, Fuzzy measures. Fuzzy Systems: Crisp logic, Predicate logic, Fuzzy logic, Fuzzy propositions, Inference rules, Fuzzy inference systems- Fuzzification, Inference, Defuzzification, Types of inference engines.	08
V	Evolutionary Computing: Introduction, Evolutionary algorithm, Biological evolutionary process, Paradigms of evolutionary computing – Genetic algorithm and Genetic programming, Evolutionary strategies, Evolutionary programming. Genetic Algorithm: Introduction, Traditional optimization and search techniques, Comparison with traditional algorithms, Operations- Encoding, Selection, Crossover and Mutation, Classification of Genetic algorithm.	08
V	Hybrid Soft Computing Techniques: Introduction, Classification of hybrid systems, Neuro-fuzzy hybrid systems, Neuro-genetic hybrid systems, Fuzzy-genetic hybrid systems. Other Soft Computing Techniques: Tabu Search, Ant colony based optimization, Swarm Intelligence.	08

Suggested Readings:

7. Freeman J. A. and Skapura D. M., “Neural Networks: Algorithms, Applications and Programming Techniques”, Pearson.
8. Siman H., “Neural Netowrks”, Prentice Hall of India.

(MCA401C): Pattern Recognition		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Study of basics of Pattern recognition. Understand the designing principles and Mathematical foundation used in pattern recognition.	K ₁ , K ₂
CO 2	Analysis the Statistical Patten Recognition.	K ₃ , K ₄
CO 3	Understanding the different Parameter estimation methods.	K ₁ , K ₂
CO 4	Understanding the different Nonparametric Techniques.	K ₁ , K ₂
CO 5	Understand and Make use of unsupervised learning and Clustering in Pattern recognition.	K ₂ K ₃ , K ₄
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Introduction: Basics of pattern recognition, Design principles of pattern recognition system, Learning and adaptation, Pattern recognition approaches, Mathematical foundations – Linear algebra, Probability Theory, Expectation, mean and covariance, Normal distribution, multivariate normal densities, Chi squared test.	08
II	Statistical Patten Recognition: Bayesian Decision Theory, Classifiers, Normal density and discriminant functions	08
III	Parameter estimation methods: Maximum-Likelihood estimation, Bayesian Parameter estimation, Dimension reduction methods - Principal Component Analysis (PCA), Fisher Linear discriminant analysis, Expectation-maximization (EM), Hidden Markov Models (HMM), Gaussian mixture models.	08
IV	Nonparametric Techniques: Density Estimation, Parzen Windows, K-Nearest Neighbor Estimation, Nearest Neighbor Rule, Fuzzy classification.	08
V	Unsupervised Learning & Clustering: Criterion functions for clustering, Clustering Techniques: Iterative square - error partitional clustering – K means, agglomerative hierarchical clustering, Cluster validation.	08
Suggested Readings:		
1. Duda R. O., Hart P. E. and Stork D. G., "Pattern Classification", John Wiley. 2. Bishop C. M., "Neural Network for Pattern Recognition", Oxford University Press. 3. Singhal R., "Pattern Recognition: Technologies & Applications", Oxford University Press. 4. Theodoridis S. and Koutroumbas K., "Pattern Recognition", Academic Press.		

R A I P U R

(MCA401D): Data Analytics		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO1	Describe the life cycle phases of Data Analytics through discovery, planning and building.	K ₁ , K ₂
CO2	Understand and apply Data Analysis Techniques.	K ₂ , K ₃
CO3	Implement various Data streams.	K ₃
CO4	Understand item sets, Clustering, frame works & Visualizations.	K ₂
CO5	Apply R tool for developing and evaluating real time applications.	K ₃ , K ₅ , K ₆
DETAILED SYLLABUS		4-0-0
Unit	Topic	Proposed Lecture
I	<p>Introduction to Data Analytics: Sources and nature of data, classification of data (structured, semi-structured, unstructured), characteristics of data, introduction to Big Data platform, need of data analytics, evolution of analytic scalability, analytic process and tools, analysis vs reporting, modern data analytic tools, applications of data analytics.</p> <p>Data Analytics Lifecycle: Need, key roles for successful analytic projects, various phases of data analytics lifecycle – discovery, data preparation, model planning, model building, communicating results, operationalization</p>	08
II	<p>Data Analysis: Regression modeling, multivariate analysis, Bayesian modeling, inference and Bayesian networks, support vector and kernel methods, analysis of time series: linear systems analysis & nonlinear dynamics, rule induction, Neural Networks: Learning and generalisation, competitive learning, principal component analysis and neural networks, fuzzy logic: extracting fuzzy models from data, fuzzy decision trees, stochastic search methods.</p>	08
III	<p>Mining Data Streams: Introduction to streams concepts, stream data model and architecture, stream computing, sampling data in a stream, filtering streams, counting distinct elements in a stream, estimating moments, counting oneness in a window, decaying window, Real-time Analytics Platform (RTAP) applications, Case studies – Real time sentiment analysis, stock market predictions.</p>	08
IV	<p>Frequent Itemsets and Clustering: Mining frequent itemsets, market based modelling, Apriori algorithm, handling large data sets in main memory, limited pass algorithm, counting frequent itemsets in a stream, Clustering techniques: hierarchical, K-means, clustering high dimensional data, CLIQUE and ProCLUS, frequent pattern based clustering methods, clustering in non-euclidean space, clustering for streams and parallelism.</p>	08
V	<p>Frame Works and Visualization: MapReduce, Hadoop, Pig, Hive, HBase, MapR, Sharding, NoSQL Databases, S3, Hadoop Distributed File Systems, Visualization: visual data analysis techniques, interaction techniques, systems and applications.</p> <p>Introduction to R - R graphical user interfaces, data import and export, attribute and data types, descriptive statistics, exploratory data analysis, visualization before analysis, analytics for unstructured data.</p>	08

(MCA401E): Software Quality Engineering		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to:		
CO 1	Understand basic concepts of Software Quality along with its documents and process	K2
CO 2	Apply knowledge of Software Quality in various types of software	K3
CO 3	Compare the various reliability models for different scenarios	K4
CO 4	Illustrate the software Quality Planning and Assurance	K2
CO 5	Make use of various testing techniques in software implementation	K3
DETAILED SYLLABUS		3-1-0
Unit	Topic	Proposed Lecture
I	Software Quality: Definition, Software Quality Attributes and Specification, Cost of Quality, Defects, Faults, Failures, Defect Rate and Reliability, Defect Prevention, Reduction, and Containment, Overview of Different Types of Software Review, Introduction to Measurement and Inspection Process, Documents and Metrics.	08
II	Software Quality Metrics Product Quality Metrics: Defect Density, Customer Problems Metric, Customer Satisfaction Metrics, Function Points, In-Process Quality Metrics: Defect Arrival Pattern, Phase-Based Defect Removal Pattern, Defect Removal Effectiveness, Metrics for Software Maintenance: Backlog Management Index, Fix Response Time, Fix Quality, Software Quality Indicators.	08
III	Software Quality Management and Models: Modeling Process, Software Reliability Models: The Rayleigh Model, Exponential Distribution and Software Reliability Growth Models, Software Reliability Allocation Models, Criteria for Model Evaluation, Software Quality Assessment Models: Hierarchical Model of Software Quality Assessment.	08
IV	Software Quality Assurance: Quality Planning and Control, Quality Improvement Process, Evolution of Software Quality Assurance (SQA), Major SQA Activities, Major SQA Issues, Zero Defect Software, SQA Techniques, Statistical Quality Assurance, Total Quality Management, Quality Standards and Processes.	08
V	Software Verification, Validation & Testing: Verification and Validation, Evolutionary Nature of Verification and Validation, Impracticality of Testing all Data and Paths, Proof of Correctness, Software Testing, Functional, Structural and Error-Oriented Analysis & Testing, Static and Dynamic Testing Tools, Characteristics of Modern Testing Tools.	08

Kan, AddisonWesley (2002), ISBN: 0201729156 3. Norman E. Fenton and Shari Lawrence Pfleeger, "Software Metrics" Thomson, 2003 4. Mordechai Ben – Menachem and Garry S.Marliss, "Software Quality", Thomson Asia Pte Ltd, 2003. 		

(MCA402A): Blockchain Architecture		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO1	Study and understand basic concepts of blockchain architecture.	K ₁ , K ₂
CO2	Analyze various requirements for consensus protocols.	K ₄
CO3	Apply and evaluate the consensus process.	K ₃ , K ₅
CO4	Understand the concepts of Hyper ledger fabric.	K ₁
CO5	Analyze and evaluate various use cases in financial software and supply chain.	K ₄ , K ₅
DETAILED SYLLABUS		4-0-0
Unit	Topic	Proposed Lecture
I	Introduction to Blockchain: Digital Money to Distributed Ledgers, Design Primitives: Protocols, Security, Consensus, Permissions, Privacy. Blockchain Architecture and Design: Basic crypto primitives: Hash, Signature, Hashchain to Blockchain, Bitcoin Basic, Basic consensus mechanisms.	08
II	Consensus: Requirements for the consensus protocols, Proof of Work (PoW), Scalability aspects of Blockchain consensus protocols, distributed consensus, consensus in Bitcoin. Permissioned Blockchains: Design goals, Consensus protocols for Permissioned Blockchains	08
III	Hyperledger Fabric: Decomposing the consensus process, Hyperledger fabric components. Chaincode Design and Implementation Hyperledger Fabric: Beyond Chaincode: fabric SDK and Front End, Hyperledger composer tool.	08
IV	Use case 1: Blockchain in Financial Software and Systems (FSS): (i) Settlements, (ii) KYC, (iii) Capital markets, (iv) Insurance. Use case 2: Blockchain in trade/supply chain: (i) Provenance of goods, visibility, trade/supply chain finance, invoice management discounting, etc.	08
V	Use case 3: Blockchain for Government: (i) Digital identity, land records and other kinds of record keeping between government entities, (ii) public distribution system social welfare systems, Blockchain Cryptography, Privacy and Security on Blockchain	08
Suggested Readings:

R A I P U R

(MCA402B): Neural Networks		
Course Outcome (CO)	Bloom's Knowledge Level (KL)	
At the end of course, the student will be able to understand		
CO 1	Study of basic concepts of Neuro Computing, Neuroscience and ANN. Understand the different supervised and unsupervised and neural networks performance.	K ₁ , K ₂
CO 2	Study of basic Models of neural network. Understand the Perception network. and Compare neural networks and their algorithm.	K ₂ , K ₃
CO 3	Study and Demonstrate different types of neural network. Make use of neural networks for specified problem domain.	K ₂ K ₃ , K ₄
CO 4	Understand and Identify basic design requirements of recurrent network and Self-organizing feature map.	K ₁ , K ₂
CO 5	Able to understand the some special network. Able to understand the concept of Soft computing.	K ₁ , K ₂ K ₃
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Neurocomputing and Neuroscience: The human brain, biological neurons, neural processing, biological neural network. Artificial Neural Networks: Introduction, historical notes, neuron model, knowledge representation, comparison with biological neural network, applications. Learning process: Supervised learning, unsupervised learning, error correction learning, competitive learning, adaptation learning, Statistical nature of the learning process.	08
II	Basic Models: McCulloch-Pitts neuron model, Hebb net, activation functions, aggregation functions. Perceptron networks: Perceptron learning, single layer perceptron networks, multilayer perceptron networks. Least mean square algorithm, gradient descent rule, nonlinearly separable problems and bench mark problems in NN.	08
III	Multilayer neural network: Introduction, comparison with single layer networks. Back propagation network: Architecture, back propagation algorithm, local minima and global minima, heuristics for making back propagation algorithm performs better, applications. Radial basis function network: Architecture, training algorithm, approximation properties of RBF networks, comparison of radial basis function network and back propagation networks.	08
IV	Recurrent network: Introduction, architecture and types. Self-organizing feature map: Introduction, determining winner, Kohonen Self Organizing feature maps (SOM) architecture, SOM algorithm, properties of feature map; Learning vector quantization-architecture and algorithm. Principal component and independent component analysis.	08
V	Special networks: Cognitron, Support vector machines. Complex valued NN and complex valued BP. Soft computing: Introduction, Overview of techniques, Hybrid soft computing techniques.	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Kumar S., "Neural Networks- A Classroom Approach", McGraw Hill. 2. Haykin S., "Neural Networks – A Comprehensive Foundation", Pearson Education. 3. Yegnanarayana B. "Artificial Neural Networks", Prentice Hall of India. 4. Freeman J. A., "Neural Networks", Pearson Education. 5. James F., "Neural Networks – Algorithms, Applications and Programming Techniques", Pearson Education. 		

(MCA402C): Internet of Things		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Demonstrate basic concepts, principles and challenges in IoT.	K1,K2
CO 2	Illustrate functioning of hardware devices and sensors used for IoT.	K2
CO 3	Analyze network communication aspects and protocols used in IoT.	K4
CO 4	Apply IoT for developing real life applications using Arduinio programming.	K3
CP 5	To develop IoT infrastructure for popular applications	K ₂ ,K ₃
DETAILED SYLLABUS		3-1-0
Unit	Topic	Proposed Lecture
I	Internet of Things (IoT): Vision, Definition, Conceptual Framework, Architectural view, technology behind IoT, Sources of the IoT, M2M Communication, IoT Examples. Design Principles for Connected Devices: IoT/M2M systems layers and design standardization, communication technologies, data enrichment and consolidation, ease of designing and affordability	08
II	Hardware for IoT: Sensors, Digital sensors, actuators, radio frequency identification (RFID) technology, wireless sensor networks, participatory sensing technology. Embedded Platforms for IoT: Embedded computing basics, Overview of IOT supported Hardware platforms such as Arduino, NetArduino, Raspberry pi, Beagle Bone, Intel Galileo boards and ARM cortex.	08
III	Network & Communication aspects in IoT: Wireless Medium access issues, MAC protocol survey, Survey routing protocols, Sensor deployment & Node discovery, Data aggregation & dissemination	08
IV	Programming the Arduinio: Arduinio Platform Boards Anatomy, Arduinio IDE, coding, using emulator, using libraries, additions in arduinio, programming the arduinio for IoT.	08
V	Challenges in IoT Design challenges: Development Challenges, Security Challenges, Other challenges IoT Applications: Smart Metering, E-health, City Automation, Automotive Applications, home automation, smart cards, communicating data with H/W units, mobiles, tablets, Designing of smart street lights in smart city.	08
Text books: <ol style="list-style-type: none"> Olivier Hersent, David Boswarthick, Omar Elloumi "The Internet of Things key applications and protocols", Willey Jeeva Jose, Internet of Things, Khanna Publishing House Michael Miller "The Internet of Things" by Pearson Raj Kamal "INTERNET OF THINGS", McGraw-Hill, 1ST Edition, 2016 Arshdeep Bahga, Vijay Madiseti "Internet of Things (A hands on approach)" 1ST edition, VPI publications, 2014 Adrian McEwen, Hakin Cassimally "Designing the Internet of Things" Wiley India 		

(MCA402D): Distributed Database Systems		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to:		
CO 1	Understand theoretical and practical aspects of distributed database systems.	K2
CO 2	Study and identify various issues related to the development of distributed database system	K3
CO 3	Understand the design aspects of object-oriented database system and related development	K4
CO 4	Equip students with principles and knowledge of distributed reliability.	K3
CO 5	Equip students with principles and knowledge of parallel and object-oriented databases.	K5
DETAILED SYLLABUS		4-0-0
Unit	Topic	Proposed Lecture
I	Introduction: Distributed Data Processing, Distributed Database System, Promises of DDBSs, Problem areas. Distributed DBMS Architecture: Architectural Models for Distributed DBMS, DDMBS Architecture. Distributed Database Design: Alternative Design Strategies, Distribution Design issues, Fragmentation, Allocation.	08
II	Query processing and decomposition: Query processing objectives, characterization of query processors, layers of query processing, query decomposition, localization of distributed data. Distributed query Optimization: Query optimization, centralized query optimization, distributed query optimization algorithms.	08
III	Transaction Management: Definition, properties of transaction, types of transactions, distributed concurrency control: Serializability, concurrency control mechanisms & algorithms, time - stamped & optimistic concurrency control Algorithms, deadlock Management.	08
IV	Distributed DBMS Reliability: Reliability concepts and measures, fault-tolerance in distributed systems, failures in Distributed DBMS, local & distributed reliability protocols, site failures and network partitioning. Parallel Database Systems: Parallel database system architectures, parallel data placement, parallel query processing, load balancing, database clusters.	08
V	Distributed object Database Management Systems: Fundamental object concepts and models, object distributed design, architectural issues, object management, distributed object storage, object query Processing. Object Oriented Data Model: Inheritance, object identity, persistent programming languages, persistence of objects, comparison OODBMS and ORDBMS	08
Text books:		
M. Tamer OZSU and Patuck Valduriez: Principles of Distributed Database Systems, Pearson Edn. Asia, 2001. 2. Stefano Ceri and Giuseppe Pelagatti: Distributed Databases, McGraw Hill. REFERENCE BOOKS: 1. Hector Garcia-Molina, Jeffrey D. Ullman, Jennifer Widom: "Database Systems: The Complete Book", Second Edition, Pearson International Edition		

(MCA403A): Mobile Computing		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Study and aware fundamentals of mobile computing.	K ₁ , K ₂
CO 2	Study and analyze wireless networking protocols, applications and environment.	K ₁ , K ₄
CO 3	Understand various data management issues in mobile computing.	K ₂
CO 4	Analyze different type of security issues in mobile computing environment.	K ₄
CO 5	Study, analyze, and evaluate various routing protocols used in mobile computing.	K ₁ , K ₄ , K ₅
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Introduction, Issues in mobile computing, Overview of wireless telephony, Cellular concept, GSM- air interface, channel structure; Location management- HLR-VLR, hierarchical, handoffs; Channel allocation in cellular systems, CDMA, GPRS, MAC for cellular system.	08
II	Wireless Networking, Wireless LAN Overview- MAC issues, IEEE 802.11, Blue Tooth, Wireless multiple access protocols, TCP over wireless, Wireless applications, Data broadcasting, Mobile IP, WAP-architecture, protocol stack, application environment, applications.	08
III	Data management issues in mobile computing, data replication for mobile computers, adaptive clustering for mobile wireless networks, File system, Disconnected operations.	08
IV	Mobile Agents computing, Security and fault tolerance, Transaction processing in mobile computing environment.	08
V	Adhoc networks, Localization, MAC issues, Routing protocols, Global state routing (GSR), Destination sequenced distance vector routing (DSDV), Dynamic source routing (DSR), Adhoc on demand distance vector routing (AODV), Temporary ordered routing algorithm (TORA), QoS in Adhoc Networks, applications	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Schiller J., "Mobile Communications", Pearson 2. Upadhyaya S. and Chaudhury A., "Mobile Computing", Springer 3. Kamal R., "Mobile Computing", Oxford University Press. 4. Talukder A. K. and Ahmed H., "Mobile Computing Technology, Applications and Service Creation", McGraw Hill Education 5. Garg K., "Mobile Computing Theory and Practice", Pearson. 6. Kumar S., "Wireless and Mobile Communication", New Age International Publishers 7. Manvi S. S. and Kakkasageri M. S., "Wireless and Mobile Networks- Concepts and Protocols", Wiley India Pvt. Ltd. 		

(MCA403B): Computer Graphics and Animation		
Course Outcome (CO)	Bloom's Knowledge Level (KL)	
At the end of course, the student will be able to understand		
CO 1	Understand the graphics hardware used in field of computer graphics.	K ₂
CO 2	Understand the concept of graphics primitives such as lines and circle based on different algorithms.	K ₂ , K ₄
CO 3	Apply the 2D graphics transformations, composite transformation and Clipping concepts.	K ₄
CO 4	Apply the concepts and techniques used in 3D computer graphics, including viewing transformations, projections, curve and hidden surfaces.	K ₂ , K ₃
CO 5	Perform the concept of multimedia and animation in real life.	K ₂ , K ₃
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Introduction and Line Generation: Types of computer graphics, Graphic Displays- Random scan displays, Raster scan displays, Frame buffer and video controller, Points and lines, Line drawing algorithms, Circle generating algorithms, Mid-point circle generating algorithm, and parallel version of these algorithms.	08
II	Transformations: Basic transformation, Matrix representations and homogenous coordinates, Composite transformations, Reflections and shearing. Windowing and Clipping: Viewing pipeline, Viewing transformations, 2-D Clipping algorithms- Line clipping algorithms such as Cohen Sutherland line clipping algorithm, Liang Barsky algorithm, Line clipping against non rectangular clip windows; Polygon clipping – Sutherland Hodgeman polygon clipping, Weiler and Atherton polygon clipping, Curve clipping, Text clipping.	08
III	Three Dimensional: 3-D Geometric Primitives, 3-D Object representation, 3-D Transformation, 3-D viewing, projections, 3-D Clipping. Curves and Surfaces: Quadric surfaces, Spheres, Ellipsoid, Blobby objects, Introductory concepts of Spline, Bspline and Bezier curves and surfaces.	08
IV	Hidden Lines and Surfaces: Back Face Detection algorithm, Depth buffer method, A- buffer method, Scan line method, basic illumination models– Ambient light, Diffuse reflection, Specular reflection and Phong model, Combined approach, Warn model, Intensity Attenuation, Color consideration, Transparency and Shadows.	08
V	Multimedia Systems: Design Fundamentals, Back ground of Art, Color theory overview, Sketching & illustration, Storyboarding, different tools for animation. Animation: Principles of Animations, Elements of animation and their use, Power of Motion, Animation Techniques, Animation File Format, Making animation for Rolling Ball, making animation for a Bouncing Ball, Animation for the web, GIF, Plugins and Players, Animation tools for World Wide Web.	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Hearn D. and Baker M. P., "Computer Graphics C Version", Pearson Education 2. Foley, Vandam, Feiner, Hughes, "Computer Graphics principle", Pearson Education. 3. Rogers, "Procedural Elements of Computer Graphics", McGraw Hill 4. Newman W. M., Sproull R. F., "Principles of Interactive computer Graphics", McGraw Hill. 5. Sinha A. N. and Udai A. D., "Computer Graphics", McGraw Hill. 6. Mukherjee, "Fundamentals of Computer graphics & Multimedia", PHI Learning Private Limited. 7. Vaughan T., "Multimedia, Making IT Work", Tata McGraw Hill. 		

(MCA403C): Natural Language Processing		
Course Outcome (CO)	Bloom's Knowledge Level (KL)	
At the end of course, the student will be able to understand		
CO 1	Study and understand basic concepts, background and representations of natural language.	K ₁ , K ₂
CO 2	Analyze various real-world applications of NLP.	K ₄
CO 3	Apply different parsing techniques in NLP.	K ₃
CO 4	Understand grammatical concepts and apply them in NLP.	K ₂ , K ₃
CO 5	Apply various statistical and probabilistic grammar methods to handle and evaluate ambiguity.	K ₃ , K ₅
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Introduction to Natural Language Understanding: The study of Language, Applications of NLP, Evaluating Language Understanding Systems, Different levels of Language Analysis, Representations and Understanding, Organization of Natural language Understanding Systems, Linguistic Background: An outline of English syntax.	08
II	Introduction to semantics and knowledge representation, some applications like machine translation, database interface.	08
III	Grammars and Parsing: Grammars and sentence Structure, Top-Down and Bottom-Up Parsers, Transition Network Grammars, Top-Down Chart Parsing. Feature Systems and Augmented Grammars: Basic Feature system for English, Morphological Analysis and the Lexicon, Parsing with Features, Augmented Transition Networks.	08
IV	Grammars for Natural Language: Auxiliary Verbs and Verb Phrases, Movement Phenomenon in Language, Handling questions in Context-Free Grammars. Human preferences in Parsing, Encoding uncertainty, Deterministic Parser.	08
V	Ambiguity Resolution: Statistical Methods, Probabilistic Language Processing, Estimating Probabilities, Part-of Speech tagging, Obtaining Lexical Probabilities, Probabilistic Context-Free Grammars, Best First Parsing. Semantics and Logical Form, Word senses and Ambiguity, Encoding Ambiguity in Logical Form.	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Akshar Bharti, Vineet Chaitanya and Rajeev Sangal, "NLP: A Paninian Perspective", Prentice Hall, New Delhi. 2. James Allen, "Natural Language Understanding", Pearson Education. 3. D. Jurafsky, J. H. Martin, "Speech and Language Processing", Pearson Education. 4. L. M. Ivasca, S. C. Shapiro, "Natural Language Processing and Language Representation", AAAI Press, 2000. 5. T. Winograd, Language as a Cognitive Process, Addison-Wesley. 		

(MCA403D): Machine Learning Techniques		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able:		
CO 1	To understand the need for machine learning for various problem solving	K ₁ , K ₂
CO 2	To understand a wide variety of learning algorithms and how to evaluate models generated from data	K ₁ , K ₃
CO 3	To understand the latest trends in machine learning	K ₂ , K ₃
CO 4	To design appropriate machine learning algorithms and apply the algorithms to a real-world problems	K ₄ , K ₆
CO 5	To optimize the models learned and report on the expected accuracy that can be achieved by applying the models	K ₄ , K ₅
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	INTRODUCTION – Learning, Types of Learning, Well defined learning problems, Designing a Learning System, History of ML, Introduction of Machine Learning Approaches – (Artificial Neural Network, Clustering, Reinforcement Learning, Decision Tree Learning, Bayesian networks, Support Vector Machine, Genetic Algorithm), Issues in Machine Learning and Data Science Vs Machine Learning;	08
II	REGRESSION: Linear Regression and Logistic Regression BAYESIAN LEARNING - Bayes theorem, Concept learning, Bayes Optimal Classifier, Naïve Bayes classifier, Bayesian belief networks, EM algorithm. SUPPORT VECTOR MACHINE: Introduction, Types of support vector kernel – (Linear kernel, polynomial kernel, and Gaussian kernel), Hyperplane – (Decision surface), Properties of SVM, and Issues in SVM.	08
III	DECISION TREE LEARNING - Decision tree learning algorithm, Inductive bias, Inductive inference with decision trees, Entropy and information theory, Information gain, ID-3 Algorithm, Issues in Decision tree learning. INSTANCE-BASED LEARNING – k-Nearest Neighbour Learning, Locally Weighted Regression, Radial basis function networks, Case-based learning.	08
IV	ARTIFICIAL NEURAL NETWORKS – Perceptron's, Multilayer perceptron, Gradient descent and the Delta rule, Multilayer networks, Derivation of Backpropagation Algorithm, Generalization, Unsupervised Learning – SOM Algorithm and its variant; DEEP LEARNING - Introduction, concept of convolutional neural network , Types of layers – (Convolutional Layers , Activation function , pooling , fully connected) , Concept of Convolution (1D and 2D) layers, Training of network, Case study of CNN for eg on Diabetic Retinopathy, Building a smart speaker, Self-driving car etc.	08
V	REINFORCEMENT LEARNING –Introduction to Reinforcement Learning , Learning Task, Example of Reinforcement Learning in Practice, Learning Models for Reinforcement – (Markov Decision process , Q Learning - Q Learning function, Q Learning Algorithm), Application of Reinforcement Learning, Introduction to Deep Q Learning. GENETIC ALGORITHMS: Introduction, Components, GA cycle of reproduction, Crossover, Mutation, Genetic Programming, Models of Evolution and Learning, Applications.	08

Text books:

2. Ethem Alpaydin, —Introduction to Machine Learning (Adaptive Computation and Machine Learning), MIT Press 2004.
3. Stephen Marsland, —Machine Learning: An Algorithmic Perspective, CRC Press, 2009.
4. Bishop, C., Pattern Recognition and Machine Learning. Berlin: Springer-Verlag.
5. M. Gopal, “Applied Machine Learning”, McGraw Hill Education

(MCA403E): Quantum Computing		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to understand		
CO 1	Distinguish problems of different computational complexity and explain why certain problems are rendered tractable by quantum computation with reference to the relevant concepts in quantum theory.	K ₁ , K ₂
CO 2	Demonstrate an understanding of a quantum computing algorithm by simulating it on a classical computer, and state some of the practical challenges in building a quantum computer.	K ₂ , K ₃
CO 3	Contribute to a medium-scale application program as part of a co-operative team, making use of appropriate collaborative development tools (such as version control systems).	K ₂ , K ₃
CO 4	Produce code and documentation that is comprehensible to a group of different programmers and present the theoretical background and results of a project in written and verbal form.	K ₃ , K ₄
CO 5	Apply knowledge, skills, and understanding in executing a defined project of research, development, or investigation and in identifying and implementing relevant outcomes.	K ₃ , K ₆
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Fundamental Concepts: Global Perspectives, Quantum Bits, Quantum Computation, Quantum Algorithms, Quantum Information, Postulates of Quantum Mechanisms.	08
II	Quantum Computation: Quantum Circuits – Quantum algorithms, Single Orbit operations, Control Operations, Measurement, Universal Quantum Gates, Simulation of Quantum Systems, Quantum Fourier transform, Phase estimation, Applications, Quantum search algorithms – Quantum counting – Speeding up the solution of NP – complete problems – Quantum Search for an unstructured database.	08
III	Quantum Computers: Guiding Principles, Conditions for Quantum Computation, Harmonic Oscillator Quantum Computer, Optical Photon Quantum Computer – Optical cavity Quantum electrodynamics, Ion traps, Nuclear Magnetic resonance	08
IV	Quantum Information: Quantum noise and Quantum Operations – Classical Noise and Markov Processes, Quantum Operations, Examples of Quantum noise and Quantum Operations – Applications of Quantum operations, Limitations of the Quantum operations formalism, Distance Measures for Quantum information.	08
V	Quantum Error Correction: Introduction, Shor code, Theory of Quantum Error – Correction, Constructing Quantum Codes, Stabilizer codes, Fault – Tolerant Quantum Computation, Entropy and information – Shannon Entropy, Basic properties of Entropy, Von Neumann, Strong Sub Additivity, Data Compression, Entanglement as a physical resource .	08
