(57) Abstract :

The present invention relates to a food item that boosts the immune system of a consumer. The food item contains a predefined concentration of rhododendron flower and ginger, in the ranges of 25-30% and 20-22%, respectively. The food item is in the form of a juice and is be preserved using salt, sugar, vinegar, citric acid, ascorbic acid, or sodium benzoate. A method is disclosed for preparing the food item, which involves washing the rhododendron flowers, boiling them in water, adding them to a sugar syrup, mixing in ginger juice, and adding a preservative. The prepared food item is subjected to an antiviral test to assess its effectiveness against viruses. This invention provides a natural and effective way to enhance immune function in consumers.
