(57) Abstract :

The present invention provides a novel approach to producing nutraceutical beverage using Curcuma angustifolia powder as a key ingredient. The nutraceutical beverage is formulated with white granulated sugars, acesulfame potassium, potassium sorbates, carrageenan, malic acid, and pure water to provide a pure taste and health benefits. The combination of ingredients offers a solution for consumers seeking natural and healthy alternatives to conventional sugary drinks. The invention's unique production method involves a specific sequence of raw material addition, followed by sterilization and packaging. Embodiments of the invention are provided, highlighting the optimal weight proportion of each raw material. The arrowroot beverage produced by this invention can meet the needs of health-conscious consumers and contribute to the growth of the functional beverage market.
