(57) Abstract :

The present invention provides an automated poetry analysis system that uses natural language processing algorithms to analyze and compare the works of Alfred Tennyson with other poets. The system is designed to identify similarities and differences between Tennyson's works and other poets, as well as to identify unique aspects of Tennyson's poems. The system comprises an input unit for receiving a plurality of poems from various poets, a processing unit, including natural language processing algorithms, and an output unit for displaying the results of the analysis. The system and method provide a better understanding of Tennyson's style and influence on other poets, and can be used by researchers, scholars, and students to analyze and compare poetry more efficiently and objectively.
